Bjorn Lomborg

Skeptical Environmentalist Measuring The Real State Of The World:

The Skeptical Environmentalist Bjørn Lomborg, 2001-08-30 The Skeptical Environmentalist challenges widely held beliefs that the environmental situation is getting worse and worse. The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence. Using the best available statistical information from internationally recognised research institutes Bjørn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world. His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves. Concluding that there are more reasons for optimism than pessimism Bjørn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems. The Skeptical Environmentalist offers readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media.

The Skeptical Environmentalist Bjørn Lomborg, 2001 Bjørn Lomborg a former member of Greenpeace challenges widely held beliefs that the global environment is progressively getting worse. Using statistical information from internationally recognized research institutes Lomborg systematically examines a range of major environmental issues and documents that the global environment has actually improved. Throughout the book his sources are fully referenced allowing discerning readers to investigate the facts used to support his argument. Lomborg criticizes the way many environmental organizations make selective and misleading use of scientific data to influence decisions about the allocation of limited resources. Written by a nonpartisan independent thinker The Skeptical Environmentalist is a useful corrective to the more alarmist accounts favored by green activists and the media.

The Skeptical Environmentalist Bjørn Lomborg, 2003 *The Skeptical Environmentalist* Bjørn Lomborg, 2001-08-01 Challenges widely held beliefs regarding the current environmental situation discussing why there is cause for optimism and the need to prioritize resources to address problems.

The Lomborg Deception Howard Friel, 2010-01-01 Questions the research assumptions and intention behind Danish statistician Bjørn Lomborg's attacks on peer reviewed scientific theories of global warming.

Encyclopedia of Energy, Natural Resource, and Environmental Economics, 2013-03-29 Every decision about energy involves its price and cost. The price of gasoline and the cost of buying from foreign producers, the price of nuclear and hydroelectricity and the costs to our ecosystems, the price of electricity from coal fired plants and the cost to the atmosphere. Giving life to inventions, lifestyle changes, geopolitical shifts and things in between, energy economics is of high interest to Academia, Corporations and Governments. For economists, energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources: energy economics which focuses on energy related subjects such as renewable energy, hydropower, nuclear power and the political economy of energy; resource economics which covers subjects in land and water use such as mining, fisheries, agriculture and forests.

environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government

Doing Good Better

William MacAskill, 2016-08-02 An up and coming visionary in the world of philanthropy and a cofounder of the effective altruism movement explains why most of our ideas about how to make a difference are wrong and presents a counterintuitive way for each of us to do the most good possible While a researcher at Oxford William MacAskill decided to devote his study to a simple question How can we do good better MacAskill realized that while most of us want to make a difference we often decide how to do so based on assumptions and emotions rather than facts As a result our good intentions often lead to ineffective sometimes downright harmful outcomes As an antidote MacAskill and his colleagues developed effective altruism a practical data driven approach to doing good that allows us to make a tremendous difference regardless of our resources Effective altruists operate by asking certain key questions that force them to think differently set aside biases and use evidence and careful reasoning rather than act on impulse In Doing Good Better MacAskill lays out these principles and

shows that when we use them correctly when we apply the head and the heart to each of our altruistic endeavors each of us has the power to do an astonishing amount of good

Contesting Global Environmental Knowledge, Norms and Governance M. J. Peterson, 2019-01-08 Through theoretical discussions and case studies this volume explores how processes of contestation about knowledge norms and governance processes shape efforts to promote sustainability through international environmental governance The epistemic communities literature of the 1990s highlighted the importance of expert consensus on scientific knowledge for problem definition and solution specification in international environmental agreements This book addresses a gap in this literature insufficient attention to the multiple forms of contestation that also inform international environmental governance These forms include within discipline contestation that helps forge expert consensus inter disciplinary contestation regarding the types of expert knowledge needed for effective response to environmental problems normative and practical arguments about the proper roles of experts and laypersons and contestation over how to combine globally developed norms and scientific knowledge with locally prevalent norms and traditional knowledge in ways ensuring effective implementation of environmental policies This collection advances understanding of the conditions under which contestation facilitates or hinders the development of effective global environmental governance The contributors examine how attempts to incorporate more than one stream of expert knowledge and to include lay knowledge alongside it have played out in efforts to create and maintain multilateral agreements relating to environmental concerns It will interest scholars and graduate students of political science global governance international environmental politics and global policy making Policy analysts should also find it useful
