Entropy Theory illuminates the fundamental problems of societal analysis with a nonequilibrium approach a new frame of reference built upon contemporary macrological principles including general systems theory and information theory Social entropy theory using Shannon's H and the entropy concept avoids the common and often artificial separation of theory and method in sociology The hallmark of the volume is integration as seen in the author's interdisciplinary discussions of equilibrium entropy and homeostasis Unique features of the book are the introduction of the three level model of social measurement the theory of allocation the concepts of global mutable immutable discussion of order and power and a large set of testable hypotheses Entropy Measures of Inequality Kenneth D. Bailey, 1981 *Systems Science and Cybernetics -*

Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi

disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

The Social Metabolism Manuel González de Molina, Víctor M. Toledo, 2014-06-30 Over this last decade the concept of Social Metabolism has gained prestige as a theoretical instrument for the required analysis to such an extent that there are now dozens of researchers hundreds of articles and several books that have adopted and use this concept However there is a great deal of variety in terms of

definitions and interpretations as well as different methodologies around this concept which prevents the consolidation of a unified field of new knowledge The fundamental aim of the book is to conduct a review of the past and present usage of the concept of social metabolism its origins and history as well as the main currents or schools that exist around this concept At the same time the reviews and discussions included are used by the authors as starting points to draw conclusions and propose a theory of socio ecological transformations The theoretical and methodological innovations of this book include a distinction of two types of metabolic processes tangible and intangible the analysis of the social metabolism at different scales in space and time and a theory of socio ecological change overcoming the merely systemic or cybernetic nature of conventional approaches giving special protagonism to collective action *Sociology and the New Systems Theory* Kenneth D. Bailey,1994-01-11 This book provides current information about the many recent contributions of social systems theory While some sociologists feel that the systems age ended with functionalism in reality a number of recent developments have occurred within the field The author makes these developments accessible to sociologists and other non systems scholars and begins a synthesis of the burgeoning systems field and mainstream sociological theory The analysis shows not only that important points of rapprochement exist between systems theory and sociological theory but also that systems theory has in some cases anticipated developments needed in mainstream theory *Chaos and Society* A. Albert,1995 This publication reflects on the discussion on using chaos theory for the study of society It explores the interface between chaos theory and the social sciences A broad variety of fields including Sociology Anthropology Economics Political Science Management Philosophy and Cognitive Sciences is represented in the book The leading themes are Conceptual and Methodological Issues Social Connectionism and the Connectionist Mind Social Institutions and Public Policy and Social Simulations The book includes the following topics the relevance of the complexity chaos paradigm for analyzing social systems the usefulness of nonlinear dynamics for studying the formation and sustainability of social groups the comparison between spontaneous social orders and spontaneous biological natural orders the building of Artificial Societies and the contribution of the chaos paradigm to a better understanding and formulation of public policies *Whole Onflow* Gavin J. Andrews,Cameron Duff,Keith Woodward,2025-12-17 This book describes whole onflow which is at once the emergence and becoming of the entirety of the world universe and any actual unique position whatsoever in it now A physical plane and self organizing process that owes its energy to the Big Bang in our region it now unfolding the infinitely complex and varied world we engage contribute to and experience There have been many academic ideas on the nature of emergence and becoming in the world including ideas on the world s overall emergence and becoming In this book we extend some of these ideas to conceptualize a physical plane incorporating all possible positions and local variability all geographies what we refer to as whole onflow We answer some key questions including What is the processual nature of whole onflow through which the world emerges and becomes in the moment How might thinking in terms of whole onflow expand our ideas on the world s

productions from health to ageing to capitalism and beyond How might this help us get to grips with today's kinetic energy dependent multi textured and process ignorant world The book lays out the broad theoretical landscape It demonstrates how principles and processes established by physics and cosmology might be combined with principles and processes conveyed by social theory to describe the world in whole onflow Dealing then with the very origins of all that is and all that is social the book is core reading for social scientists who like to think fundamentally It is very much a speculative and provocative piece but a necessary one and will be of particular interest to those studying the world through poststructuralist posthumanist new materialist and non representational theoretical lenses Moving forward certain scholars might follow the specific points of departure and pathways the book signposts Others might choose to tread the new ground the book opens up in their own ways

Complexity and Resilience in the Social and Ecological Sciences Eoin Flaherty, 2018-08-16 This book introduces a new approach to environmental sociology by integrating complexity informed social science Marxian ecological theory and resilience based human ecology It argues that sociologists have largely ignored developments in ecology which move beyond functionalist approaches to systems analysis and as a result environmental sociology has failed to capitalise not only on the

analytical promise of resilience ecology but on complementary developments in complexity theory By tracing the origins and discussing current developments in each of these areas it offers several paths to interdisciplinary dialogue Eoin Flaherty argues that complexity theory and Marxian ecology can enhance our understanding of the social aspect of social ecological systems whilst a resilience approach can sharpen the analytical power of environmental sociology *Frontiers in Enterprise Integration* Li D. Xu, 2020-10-28 Enterprise Information Systems EIS integrate and support business processes across functional boundaries in a supply chain environment and have become increasingly popular over the last 15 years In recent years more and more enterprises world wide have adopted EIS such as Enterprise Resource Planning ERP for running their businesses Previously information systems such as CAD CAM MRPII and CRM were widely used for partial functional integration within a business organization With global operation global supply chain and fierce competition in place there is a need for suitable EIS such as ERP E Business or E Commerce systems to integrate extended enterprises in a supply chain environment with the objective of achieving efficiency competency and competitiveness As a result there is a growing demand for researching EIS to provide insights into challenges issues and solutions related to the design implementation and management of EIS The papers in *Advances in Enterprise Information Systems* were selected from two premier international conferences the International Forum of Information Systems Frontiers Xian International Symposium IFISF June 29 30 2006 Xian China and the IFIP TC 8 9 International Conference on Research and Practical Issues of Enterprise Information Systems Confenis 2007 October 14 16 Beijing China Both events provided an excellent opportunity for EIS academicians and practitioners in the world to gather and exchange ideas and present original research in their fields *Advances in Enterprise Information Systems* will be invaluable to scientists researchers and professionals in EIS Modern Sociological Theory George Ritzer, Jeffrey Stepnisky, 2017-01-23 The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award enabling graduate students and early career faculty to attend the annual ASA pre conference teaching and learning workshop Now with SAGE Publishing and co authored by one of the foremost authorities on sociological theory the Eighth Edition of *Modern Sociological Theory* by George Ritzer and Jeffrey Stepnisky provides a comprehensive overview of the major theorists and theoretical schools from the Structural Functionalism of early 20th century through the cutting edge theories of the late 20th and early 21st centuries The integration of key theories with biographical sketches of theorists and the requisite historical and intellectual context helps students to better understand the original works of contemporary thinkers **Systems Science and Cybernetics - Volume III** Francisco Parra-Luna, The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the

Gatzweiler, Joachim von Braun, 2016-02-19 The aim of the book is to present contributions in theory policy and practice to the science and policy of sustainable intensification by means of technological and institutional innovations in agriculture The research insights re from Sub Saharan Africa and South Asia The purpose of this book is to be a reference for students scholars and practitioners in the field of science and policy for understanding and identifying agricultural productivity growth potentials in marginalized areas *Theory of Conditional Games* Wynn C.
