Evaluation and Experiment Carl A. Bennett, Arthur A. Lumsdaine, 2013-09-24 Evaluation and Experiment Some Critical Issues in Assessing Social Programs is a collection of papers presented at the 1973 symposium held at The Battelle Seattle Research Center This book contains eight chapters that consider some selected aspects of the problems in evaluating the outcomes of socially important programs such as those dealing with education health and economic policy The first chapter provides an overview of the issues around the Social Program Evaluation The next chapters deal with the successes and failures brought by social innovations the quasi experimental evaluation in compensatory education to estimate the true effects of such education programs and the usefulness and validity of econometric and related nonexperimental approaches for assessing the effects of social programs These topics are followed by surveys of a number of additional program evaluation studies particularly in the field of family planning or fertility control mostly carried out as experiments or quasi experiments in Asian and Latin American countries Other chapters describe the decision processes that involve explicit assessment of the worth or merit of outcomes and employ multivalued utility analysis and outline the ways in which evaluative data are useful in providing feedback to program or institutional operations and decisions The final chapter discusses resolutions for some of the disagreements expressed by others concerning the role of field experiments constraints in their utilization and other factors that enter into a comprehensive conception of program evaluation

Social Experiments Larry L. Orr, 1999 Intended to provide a basic understanding not only of how to design and implement social experiments but also of how to interpret their results once they are completed author Larry L Orr s Social Experiments is

written in a friendly how to manner Through the use of illustrative examples how to exhibits and cases and boldface key words Orr provides readers with a grounding in the experimental method including the rational and ethical issues of random assignment designs that best address alternative policy questions maximizing the precision of the estimates implementing the experiment in the field data collection estimating and interpreting program impacts costs and benefits dealing with potential biases and the use and misuse of experimental results in the policy process This book will be useful not only to those who plan to conduct experiments but also to the much larger group who will at one time or another want to understand the results of experimental evaluations

Public Program Evaluation Laura Langbein, 2014-12-18 This readable and comprehensive text is designed to equip students and practitioners with the statistical skills needed to meet government standards regarding public program evaluation Even those with little statistical training will find the explanations clear with many illustrative examples case studies and applications Far more than a cookbook of statistical techniques the book begins with chapters on the overall context for successful program evaluations and carefully explains statistical methods and threats to internal and statistical validity that correspond to each evaluation design Laura Langbein then presents a variety of methods for program analysis and advise readers on how to select the mix of methods most appropriate for the issues they deal with always balancing methodology with the need for generality the size of the evaluator's budget the availability of data and the need for quick results

Evaluating Welfare and Training Programs Charles F. Manski, Irwin Garfinkel, 1992 Almost everyone would like to see the enactment of sound practical measures to help disadvantaged people get off welfare and find jobs at decent wages and over the past quarter century federal and state governments have struggled to develop just such programs How do we know whether they are having the hoped for effect How do we know whether these vast outlays of money are helping the people they are designed to reach All welfare and training programs have been subject to professional evaluations including social experiments and demonstrations designed to test new ideas This book reviews what we have discovered from past assessments and suggests how welfare and training programs should be planned for the 1990s The authors of this volume each a recognized expert in the evaluation of social programs do more than summarize what we have learned so far They clarify why the issue of the proper conduct and interpretation of evaluations has itself been a subject of continuing controversy In part the problem is organizational requiring the integrated efforts of social scientists public officials and the professionals who execute evaluations In addition there is a dispute about scientific method should evaluators try to understand the complex social processes that make programs succeed or fail or should they focus on inputs and outputs treating the programs themselves as black boxes whose machinery remains hidden

Evaluating Welfare and Training Programs will be important for policy researchers and evaluation professionals social scientists concerned with evaluation methods public officials working in social policy and students of public policy economics and social work
