Social Hierarchies:

The Logic of Social Hierarchies Edward O. Laumann, Paul M. Siegel, Robert William Hodge, 1970 *Gender and Social Hierarchies* Klea Faniko, Fabio Lorenzi-Cioldi, Oriane Sarrasin, Eric Mayor, 2015-10-23 Covers important topics with multi disciplinary appeal gender stereotypes gender in the workplace and gender related prejudice No equivalent up to date examination of this subject from a social psychology perspective Contains practical recommendations for translating research in the area into real world action *Gender Regulation, Violence and Social Hierarchies in School* Victoria Rawlings, 2016-11-17 This book investigates the reasons why the traditional psychological understanding of bullying fails those affected and deconstructs how bullying is shaped by prominent discourse By drawing on poststructuralist feminist theory Victoria Rawlings highlights the social and cultural inequalities too often forgotten in analysis of aggressive behaviour in schools and places particular emphasis on gender and sexuality as facilitating and constraining forces within school environments and bullying discourses This book provides a necessary assessment as to why current anti bullying approaches are failing and offers an alternative explanation as to how and why bullying occurs This is a timely and authoritative study which is based on qualitative research including interviews and group sessions which are used to emphasize the real life experiences of young people in schools today Interdisciplinary in nature this book has a broad appeal and will be of special interest to scholars in the fields of gender and sexuality studies sociology and education Social Hierarchies between Democracy and Autocracy Björn Toelstede, 2020-11-04 Social hierarchies exist in democracies as well as in authoritarian societies However their nature is different Democratic hierarchies are built bottom up through election while autocratic hierarchies are built top down through coalition formation and domination Both have power asymmetries between the weaker citizens and the stronger politicians which are amplified the stronger the hierarchies are This thesis introduces a model which combines pro anti social behavior with different degrees of hierarchies which I unite in a model called the Structure Behavior Diagram Toelstede 2020 1 This model has the power to categorize countries according to these criteria and indicates when and how societies move between democracy and authoritarianism The movements of societies in the political space of the Structure Behavior Diagram are marked by certain patterns and dynamics I use the path dependence theory Toelstede 2019 2 and examine how so called path creating mechanisms can emerge and influence societies to move from democracy to authoritarianism I show that path dependency induced dynamics can put democracies at risk and are more serious in hierarchical societies than in horizontal societies Institutional punishment is widely seen as more stable than peer punishment However in political reality institutional punishment here in the form of policing can be marked by over and under punishment as well as changes in sociality Toelstede 2019 1 and 2020 2 These findings show together with hierarchy sensitive characteristics of the path dependency that institutional punishment and social hierarchies require more attention Lastly I show that most democratic societies are intuitively aware of the power asymmetries and long principal agent chains

between them and their political agents Together these features provide increasing benefits for an anti social descent of the agents although some societies are prepared to trade personal freedom for higher socio economic welfare They therefore strive for higher socio economic efficiency by embracing strong governmental forms and high conformity levels I call this efficient statism Toelstede 2019 2 In doing so societies compliantly put their free and democratic order at risk

Social Structure Jonathan Eastwood, 2024-12-03 Social structure is arguably the central concept of sociology and in recent years a much wider public has taken up with fresh vigor the sociological idea that persistent inequalities are rooted in social structures Yet there seem to be as many definitions of the term as there are sociologists and we often struggle to articulate accessible yet precise accounts of structures that can guide empirical research and other kinds of action Jonathan Eastwood offers a set of pragmatic strategies for thinking about social structures emphasizing ways in which we can approach them as complex lacings of relationships representations and rules He then teases out a variety of implications of these strategies for qualitative and quantitative research the analysis of social problems and the implementation of social policies Written for advanced undergraduate and graduate students as well as fellow scholars this insightful book contributes to our understanding of this fundamental and dynamic ingredient of social life

Social Dominance Jim Sidanius, Felicia Pratto, 2001-02-12 This volume focuses on two questions why do people from one social group oppress and discriminate against people from other groups and why is this oppression so mind numbingly difficult to eliminate The answers to these questions are framed using the conceptual framework of social dominance theory Social dominance theory argues that the major forms of intergroup conflict such as racism classism and patriarchy are all basically derived from the basic human predisposition to form and maintain hierarchical and group based systems of social

organization In essence social dominance theory presumes that beneath major and sometimes profound difference between different human societies there is also a basic grammar of social power shared by all societies in common We use social dominance theory in an attempt to identify the elements of this grammar and to understand how these elements interact and reinforce each other to produce and maintain group based social hierarchy

Social Structure and Forms of

Consciousness István Mészáros, 2011 In The Dialectic of Structure and History Volume Two of Social Structure and Forms of Consciousness Istvan Meszaros brings the comprehension of our condition and the possibility of emancipatory social action beyond the highest point reached to date Building on the indicatory flashes of conceptual lightning in the Grundrisse and other works of Karl Marx Meszaros sets out the relations of structure and agency individual and society base and superstructure nature and history in a dialectical totality open to the future The project is brought to its conclusion by means of critique an analysis that shows not only the inadequacies of the thought critiqued but at the same time their social historical cause The crucial questions are addressed through critique of the highest point of honest and brilliant thought in capital s ascending phase that of Adam Smith Kant and Hegel as well as the irrationalities and dishonesty of the apologists of the capital system s descending phase such as Hayek and Popper The dead ends of both Levi Strauss s structuralism and post modernism arising from their denial of history are placed in their context as capital apologetics What Meszaros the leading Marxist philosopher of our times has achieved is of world historical importance He has cleared the philosophical ground to permit the illumination of a path to transcend the destructive death spiral of the capital system

Social Structure and

Forms of Consciousness, Volume 2 István Mészáros, 2010 This new work by the leading Marxian philosopher of our day is a milestone in human self understanding It focuses on the location where action emerges from freedom and necessity the foundation of all social science Today as never before the investigation of the close relationship between social structure defined by Marx as arising from the life process of definite individuals and the various forms of consciousness is particularly important We can only perceive what is possible by first identifying the historical process that constrains consciousness itself and therefore social action The relationship between social structure and forms of consciousness discussed in this volume is multifaceted and profoundly dialectical It requires the presentation of a great wealth of historical material and the assessment of the relevant philosophical literature from Descartes through Hegel and the Liberal tradition to the present together with their connections with political economy and political theory Istvan Meszaros moves beyond both abstract solutions to the surveyed methodological questions and one sided structuralist evaluation of the important substantive issues bringing the process of our understanding of social structure and consciousness to a level not previously attained Above all in the spirit of the Marxian approach even the most complicated problems are analyzed in relation to the major practical concerns of our time The primary aim of this work is to outline the dialectical intelligibility of historical development toward a viable societal reproductive order Social Structure and Forms of Consciousness is of the highest importance as both a

Cacioppo, 2015-04-15 The complexities of the brain and nervous system make neuroscience an inherently interdisciplinary pursuit one that comprises disparate basic clinical and applied disciplines Behavioral neuroscientists approach the brain and nervous system as instruments of sensation and response cognitive neuroscientists view the same systems as a solitary computer with a focus on representations and processes The Oxford Handbook of Social Neuroscience marks the emergence of a third broad perspective in this field Social neuroscience emphasizes the functions that emerge through the coaction and
