James Bale Morman, 1900 **Information Technology, Development, and Social Change** Fay Patel, Prahalad Sooknanan, Giselle Rampersad, Anuradha Mundkur, 2012-05-31 The speed and cost effectiveness of new information technology has prompted many to view these innovations as a panacea for social and economic development. However, such a view flies in the face of continuing inequities in education, health, food and infrastructure. This volume explores these issues along with questions of access, privilege, literacy training and the environmental and health effects of information technologies in the developing world, arguing that a higher level of development does not always result from a higher level of technologization. **Culture and Social Progress** Joseph Kirk Folsom, 1928 **Sustainable Development in Small**

Fair Development in China Qingyun Jiang, Lixian Qian, Min Ding, 2016-10-04 The purpose of this volume is to explore sustainable innovation and fair development in China. It examines various existing problems currently faced in China such as food safety, education, healthcare, employment, housing, the environment and censorship among others and provides different perspectives in relation to fair development. Topics covered include coordinated governance, energy consumption and policy, dynamic sustainability, green marketing and people-oriented education. While the focus of the volume is on China, the research process and structure presented can also be used to explore fair development in other emerging economies. Fair development is a framework that includes such principles as sustainability with particular respect to the implications for human development in the context of available opportunities, resources and outputs. China, the world's second largest economy, continues to face several challenges when pursuing sustainable development such as unbalanced growth, pressure in the central and western regions and rural areas of China, the fragility of the natural environment and resource constraints and structural problems in economic and social development. It is a crucial mission for China to sustain economic growth without sacrificing environmental sustainability or human rights. For example, there is increasing pressure on China to reduce its dependence on fossil energy. Therefore, innovations in technologies, management and even systems are critical to drive a transition to low-carbon energy, which will be a long-term process. Featuring contributions from a diverse group of researchers from multiple disciplines, this volume provides a comprehensive collection of perspectives on economic, political and social development in China.
