The New Industrial Landscape The Story Of The Austin Company

Martin Greif

The New Industrial Landscape The Story Of The Austin Company:

The New Industrial Landscape Martin Greif,1978 *A Better Way to Build* Michael R. Adamson,2013 While architects have been the subject of many scholarly studies we know very little about the companies that built the structures they designed This book is a study in business history as well as civil engineering and construction management It details the contributions that Charles J Pankow a 1947 graduate of Purdue University and his firm have made as builders of large often concrete commercial structures since the company s foundation in 1963 In particular it uses selected projects as case studies to analyze and explain how the company innovated at the project level The company has been recognized as a pioneer in design build a methodology that involves the construction company in the development of structures and substitutes negotiated contracts for the bidding of architects plans The Pankow companies also developed automated construction technologies that helped keep projects on time and within budget The book includes dozens of photographs of buildings under construction from the company s archive and other sources At the same time the author analyzes and evaluates the strategic decision making of the firm through 2004 the year in which the founder died While Charles Pankow figures prominently in the narrative the book also describes how others within the firm adapted the business so that the company could survive a commercial market that changed significantly as a result of the recession of the 1990s Extending beyond the scope of most business biographies this book is a study in industry innovation and the power of corporate culture as well as the story of one particular company and the individuals who created it *Albert Kahn Inc.* Claire Zimmerman,2025-08-12 A study of Albert Kahn Incorporated the architecture firm closely associated with the Ford Motor Company and other auto companies that explores capitalism and political economy through the built environment of industry and culture In *Albert Kahn Inc* Claire Zimmerman provides a history of second wave industrialization associated with the growth and development of the United States auto industry and its global footprint A forensic analysis of the architects of Ford the book theorizes how building and capitalism intersected in the case of twentieth century industrial buildings but also in other kinds of architecture and in the built environment writ large Generally a marginal subject in histories of architecture industrialism here exposes the expansionist modern project in Western architecture and culture which was based on natural resource extraction and labor exploitation With more than 140 full color illustrations the book combines an analysis of industrial architecture with compelling photographic evidence drawn from assorted archives Zimmerman offers a political economy of architecture reconceptualizes the design process within a high volume firm in dialogue with fast paced industrial capitalism tracks the feedback loops that industrialization introduced into architecture and maps the unequal effects of these industrial environments on the workers who labored within them Ultimately Zimmerman shows how the coalition of US private capital and state power built industrial installations as imperialist projects and how its practices survive to the present day **The Evolution of Airport Design** Robert Stewart,2024-05-13 This is the first book to comprehensively cover the evolution of

airport design from the start of commercial aviation in 1919 to the present day Many books have been written about airport design at a particular moment in history but none have rigorously considered why where when and how the ideas we now take for granted originated This book traces the history of airport design considering the philosophies adopted by designers the functional layouts they have developed and the resultant form of the airport through a series of 40 case studies divided into 7 eras of approximately 20 years each The themes include The philosophies underpinning airport design The evolution of design responses How airports have avoided obsolescence Identification of the key turning points The evolution of master plans and terminal concepts in response to increasing traffic volumes The future of airports in terms of environmental sustainability and the Covid 19 hiatus The case studies are international covering the USA Germany the UK France the Netherlands Singapore Saudi Arabia Japan Hong Kong Malaysia South Korea Thailand Spain United Arab Emirates China Turkey Mexico Australia and Poland They are illustrated with full colour many of which have not been published before and form part of an incredible graphic package This book is essential reading for architects engineers planners and environmentalists alike

East of Cleveland Richard Cartwright Austin,2004 This is a history of two intertwining families over four generations who exhibited moral imagination It is the storyh of one religious movement s engagement with industrial revolution It is the story of an innovative company developing new technology for industry of a church congregation at the heart of an urban community and of that community itself

Supersheds Chris Wilkinson,2013-10-22 Supersheds The Architecture of Long Span Large Volume Buildings deals with large single volume buildings known as supersheds This book explains and catalogues the changes in modern architecture of supersheds and illustrates this with significant and important examples This text is composed of six chapters The first chapter gives a background of 19th century architecture that made possible great exhibition halls and long spans of the railway era The second chapter deals with another type of supershed airship and aircraft hangars In the third chapter industrial architecture in Europe and in the U S during the early 20th century is examined Examples of beautiful factories and building designs are mentioned and the effects of World War II on the type of building constructions are also discussed The fourth chapter traces the evolution of the well serviced multi use shed The architecture of the extruded shed the cool box and special structures are described as well The major influences that affected building design in the second half of the 20th century are mentioned as the machine transfer technology and computers The fifth chapter explains the concept of more with less where the task is to accomplish more with less material Space structures suspended roof structures and air supported structures are given as examples The last chapter discusses the future of modern architecture along with new forms materials and technology such as solid state chemistry computers and biotechnology Architects civil and construction engineers architectural students and the general public who has an interest in reading about large building designs and supersheds will find this book interesting

The Works Betsy H. Bradley,1999 While tracing the important developments in industrial architecture over a one hundred year

period she demonstrates that as the United States became an industrialized nation the goals pursued in industrial architecture remained straightforward and constant even as the means to achieve them changed

Cars for Comrades
Lewis H. Siegelbaum, 2011-08-15 The automobile and Soviet communism made an odd couple The quintessential symbol of American economic might and consumerism never achieved iconic status as an engine of Communist progress in part because it posed an awkward challenge to some basic assumptions of Soviet ideology and practice In this rich and often witty book Lewis H Siegelbaum recounts the life of the Soviet automobile and in the process gives us a fresh perspective on the history and fate of the USSR itself Based on sources ranging from official state archives to cartoons car enthusiast magazines and popular films Cars for Comrades takes us from the construction of the huge Soviet Detroit's emblems of the utopian phase of Soviet planning to present day Togliatti where the fate of Russia's last auto plant hangs in the balance The large role played by American businessmen and engineers in the checkered history of Soviet automobile manufacture is one of the book's surprises and the author points up the ironic parallels between the Soviet story and the decline of the American Detroit In the interwar years automobile clubs car magazines and the popularity of rally races were signs of a nascent Soviet car culture its growth slowed by the policies of the Stalinist state and by Russia's intractable roadlessness In the postwar years cars appeared with greater frequency in songs movies novels and in propaganda that promised to do better than car crazy America Ultimately Siegelbaum shows the automobile epitomized and exacerbated the contradictions between what Soviet communism encouraged and what it provided To need a car was a mark of support for industrial goals to want a car for its own sake was something else entirely Because Soviet cars were both hard to get and chronically unreliable and such items as gasoline and spare parts so scarce owning and maintaining them enmeshed citizens in networks of private semi illegal and ideologically heterodox practices that the state was helpless to combat Deeply researched and engagingly told this masterful and entertaining biography of the Soviet automobile provides a new perspective on one of the twentieth century's most iconic and important technologies and a novel approach to understanding the history of the Soviet Union itself

Building a new New World Jean-Louis Cohen, 2021-01-12 An essential exploration of how Russian ideas about the United States shaped architecture and urban design from the czarist era to the fall of the U S S R Idealized representations of America as both an aspiration and a menace played an important role in shaping Russian architecture and urban design from the American Revolution until the fall of the Soviet Union Jean Louis Cohen traces the powerful concept of Amerikanizm and its impact on Russia's built environment from early czarist interest in Revolutionary America through the spectacular World's Fairs of the 19th century to department stores skyscrapers and factories built in Russia using American methods during the 20th century Visions of America also captivated the Russian avant garde from El Lissitzky to Moisei Ginzburg and Cohen explores the ongoing artistic dialogue maintained between the two countries at the mid century and in the late Soviet era following a period of strategic competition This first major study of Amerikanizm in the architecture of Russia makes a timely

contribution to our understanding of modern architecture and its broader geopolitics

The Making of Virginia

Architecture Charles E. Brownell, 1992 The long tradition of architecture in Virginia begins with the earliest structures at the Jamestown settlement in 1607 and continues today with some of the most advanced buildings yet completed anywhere In its legendary landmarks Mount Vernon Monticello the Virginia Capitol building in Richmond the James River plantation mansions the Reynolds Metals headquarters building in Richmond Washington National Airport and Dulles International Airport as well as in homes churches stores and office buildings across the state Virginia's architecture is a mirror of the many expressions of America's built environments This book invites the readers on a journey through the eye and mind of the architect from the very drawings that give shape and form to the idea through the tracks and traces found in long lost letters office records and other primary sources You will never see the buildings around you anywhere in the same way again From publisher's description
