The New Cosmos:

The New Cosmos Albrecht Unsöld, Bodo Baschek, 2001-09-04 This new edition of the classic textbook *The New Cosmos* presents a comprehensive introductory survey of the whole field of astronomy and astrophysics. Among the topics covered are Classical astronomy and the Solar System, Instruments and observational methods, The Sun and the stars, The Milky Way and other galaxies, Cosmology, The origin of the Solar System, The evolution of the Earth and of life. The observational methods and results of astronomical research as well as their theoretical foundations and interrelations are presented in an understandable format. The rapid progress of observational techniques and of theoretical understanding in the past decade are introduced and summarized in this timely and readable volume. This revised and extended new printing demonstrates the rapid advances in astronomical research and observation in the three years since the appearance of the 5th edition. The most important new results can be found within providing in particular up to date information on our solar system, neutrino radiation from the Sun, the farthest galaxies and quasars and the development of the Universe. **The New Cosmos A.** Unsöld, B. Baschek, 2013-04-17 to the Second Edition. The development of astronomy in the last ten years has been nothing short of explosive. This second edition of *The New Cosmos* considerably revised and enlarged tries to share this development with its readers. Let us mention a few key words from modern landings, planetary probes, and continental drift through pulsars, X-ray and gamma-ray sources, interstellar molecules, quasars and the structure and evolution of stars and stellar systems right up to cosmological models. As before, the most important task of this book is to give a not too difficult introduction to present-day astronomy and astrophysics both to the student of astronomy and to the specialist from a neighboring discipline. We therefore draw to the attention of the reader as an essential part of our description the numerous illustrations, many of them new and their detailed captions. As far as possible we link a description of important observations with basic features of the theory. On the other hand, when it comes to detail, we often content ourselves with a brief description, leaving the detailed explanation to the specialist literature. The transition to the specialist literature should be eased by the Bibliography at the end of the book. Important new investigations are noted in the text by their year, not so much for historical reasons as to enable the original work to be found in the *Astronomy and Astrophysics Abstracts* 1969 on. **The New Cosmos** David J. Eicher, 2015-12-03 Over the past decade, astronomers, planetary scientists, and cosmologists have answered or are closing in on the answers to some of the biggest questions about the universe. David J. Eicher presents a spectacular exploration of the cosmos that provides a balanced and precise view of the latest discoveries. Detailed and entertaining narratives on compelling topics such as how the Sun will die, the end of life on Earth, why Venus turned itself inside out, the Big Bang Theory, the mysteries of dark matter and dark energy, and the meaning of life in the universe are supported by numerous color illustrations, including photos, maps, and explanatory diagrams. In each chapter, the author sets out the scientific history of a specific question or problem before tracing the modern observations and evidence in order to solve it. Join David J. Eicher on this fascinating journey through the
