Ibrahim, 2017-04-17 This important self-contained reference deals with structural life assessment SLA and structural health monitoring SHM in a combined form. SLA periodically evaluates the state and condition of a structural system and provides recommendations for possible maintenance actions or the end of structural service life. It is a diversified field and relies on the theories of fracture mechanics, fatigue damage process and reliability theory. For common structures, their life assessment is not only governed by the theory of fracture mechanics and fatigue damage process but by other factors such as corrosion, grounding and sudden collision. On the other hand, SHM deals with the detection, prediction and location of crack development online. Both SLA and SHM are combined in a unified and coherent treatment.
