

An abstract graphic composed of a dense grid of thin, light-colored lines. The grid is warped and bent, creating a three-dimensional, crystalline or architectural appearance. It resembles a wireframe model of a complex structure, possibly a book cover or a piece of art. The lines are more concentrated in some areas, creating a sense of depth and shadow.

Social Responsibility In Science Technology And Medicine:

Social Responsibility in Science, Technology, and Medicine Paul T. Durbin, 1992 Not everyone agrees that professionals including academic philosophers need to be actively engaged in this fashion So another theme throughout is an argument against non engaged philosophers non engaged scientists and other non engaged professionals The social problems of a technological society are manifest The book attempts to show in a scholarly way how they might be addressed effectively Jacket *Philosophy of Technology and Engineering Sciences*, 2009-11-27 The Handbook Philosophy of Technology and Engineering Sciences addresses numerous issues in the emerging field of the philosophy of those sciences that are involved in the technological process of designing developing and making of new technical artifacts and systems These issues include the nature of design of technological knowledge and of technical artifacts as well as the toolbox of engineers Most of these have thus far not been analyzed in general philosophy of science which has traditionally but inadequately regarded technology as mere applied science and focused on physics biology mathematics and the social sciences First comprehensive philosophical handbook on technology and the engineering sciences Unparalleled in scope including explorative articles In depth discussion of technical artifacts and their ontology Provides extensive analysis of the nature of engineering design Focuses in detail on the role of models in technology Science, Technology & Society, 1992 **21st Century**

Anthropology: A Reference Handbook H. James Birx, 2010-06-10 Highlighting the most important topics issues questions and debates these two volumes offer full coverage of major subthemes and subfields within the discipline of anthropology

Thinking through Technology Carl Mitcham, 2024-05-31 What does it mean to think about technology philosophically Why try These are the issues that Carl Mitcham addresses in this work a comprehensive critical introduction to the philosophy of technology and a discussion of its sources and uses Tracing the changing meaning of technology from ancient times to our own Mitcham identifies the most important traditions of critical analysis of technology the engineering approach which assumes the centrality of technology in human life and the humanities approach which is concerned with its moral and cultural boundaries Mitcham bridges these two traditions through an analysis of discussions of engineering design of the distinction between tools and machines and of engineering science itself He looks at technology as it is experienced in everyday life as material objects from kitchenware to computers as knowledge including recipes rules theories and intuitive know how as activity design construction and use and as volition knowing how to use technology and understanding its consequences By elucidating these multiple aspects Mitcham establishes criteria for a more comprehensive analysis of ethical issues in applications of science and technology This book will guide anyone wanting to reflect on technology and its moral implications Science, Technology and Society, 1993 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1993 **Current Catalog** National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 **Engineers for Change** Matthew Wisnioski, 2012-10-19 An account of conflicts

within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history In the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change The engineers were fighting to remake their profession challenging their fellow engineers to embrace a more humane vision of technology In *Engineers for Change* Matthew Wisnioski offers an account of this conflict within engineering linking it to deep seated assumptions about technology and American life The postwar period in America saw a near utopian belief in technology s beneficence Beginning in the mid 1960s however society influenced by the antitechnology writings of such thinkers as Jacques Ellul and Lewis Mumford began to view technology in a more negative light Engineers themselves were seen as conformist organization men propping up the military industrial complex A dissident minority of engineers offered critiques of their profession that appropriated concepts from technology s critics These dissidents were criticized in turn by conservatives who regarded them as countercultural Luddites And yet as Wisnioski shows the radical minority spurred the professional elite to promote a new understanding of technology as a rapidly accelerating force that our institutions are ill equipped to handle The negative consequences of technology spring from its very nature and not from engineering s failures Sociotechnologists were recruited to help society adjust to its technology Wisnioski argues that in responding to the challenges posed by critics within their profession engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history

New Titles in Bioethics, 1993 Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The

explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced

undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics
