Social Science Technical Systems And Cooperative Work The Great Divide:

Social Science, Technical Systems, and Cooperative Work Geoffrey Bowker, Susan Leigh Star, Les Gasser, William Turner, 2014-05-12 This book is the first to directly address the question of how to bridge what has been termed the great divide between the approaches of systems developers and those of social scientists to computer supported cooperative work a question that has been vigorously debated in the systems development literature Traditionally developers have been trained in formal methods and oriented to engineering and formal theoretical problems many social scientists in the CSCW field come from humanistic traditions in which results are reported in a narrative mode In spite of their differences in style the two groups have been cooperating more and more in the last decade as the people problems associated with computing become increasingly evident to everyone The authors have been encouraged to examine rigorously and in depth the theoretical basis of CSCW With contributions from field leaders in the United Kingdom France Scandinavia Mexico and the United States this volume offers an exciting overview of the cutting edge of research and theory It constitutes a solid foundation for the rapidly coalescing field of social informatics Divided into three parts this volume covers social theory design theory and the sociotechnical system with respect to CSCW The first set of chapters looks at ways of rethinking basic social categories with the development of distributed collaborative computing technology concepts of the group technology information user and text The next section concentrates more on the lessons that can be learned at the design stage given that one wants to build a CSCW system incorporating these insights what kind of work does one need to do and how is understanding of design affected The final part looks at the integration of social and technical in the operation of working sociotechnical systems Collectively the contributors make the argument that the social and technical are irremediably linked in practice and so the great divide not only should be a thing of the past it should never have existed in the first place

Social Science, Technical Systems, and Cooperative Work Geoffrey C. Bowker, Susan Leigh Star, Les Gasser, William Turner, 1997 The great divide between the approaches of systems developers and those of the social scientists to computer supported cooperative work has been vigorously debated in the systems development literature In spite of their differences in style the two groups have been cooperating more and more in the last decade as the people problems associated with computing become increasingly evident to everyone This book is the first to address directly the problem of how to bridge the divide It offers an exciting overview of the cutting edge of research and theory and will constitute a solid foundation for the rapidly coalescing field of social informatics Social Science, Technical Systems, and Cooperative Work ,2009

Expert Systems Research Trends A. R. Tyler, 2007 An expert system also known as a knowledge based system is a computer program that contains some of the subject specific knowledge of one or more human experts This class of program was first developed by researchers in artificial intelligence during the 1960s and 1970s and applied commercially throughout the 1980s The most common form of expert systems is a program made up of a set of rules that analyse information usually supplied by the user of the system about a specific class of problems as well as providing mathematical analysis of the problem s and depending upon their design recommend a course of user action in order to implement corrections It is a system that utilises what

appear to be reasoning capabilities to reach conclusions This book presents important research on in this dynamic field

stand to be affected by the new electronic technologies Virtual Society is one vision of the consequential impact of these technologies But to what extent and in what ways are the Internet and other electronic technologies really changing our lives To what extent are we moving to a virtual society This collection provides a comprehensive set of detailed empirical studies of the genesis and use of these new technologies ranging widely across application areas from cyber cafés to new media email and organizational memory to surveillance capable technologies in the workplace virtual reality to CCTV in high rise housing stock exchange addicts to student study networks It offers a unique perspective analytic scepticism for making sense of some

surprisingly counterintuitive results and for developing a refreshingly critical view of many taken for granted assumptions about the impact of the Internet on social relations and institutions Each chapter presents a high quality exemplar of its own disciplinary perspective addressed to a general social science audience The diversity of disciplinary perspectives is brought to bear in a central message laid out in the opening discussion of the Five Rules of Virtuality that with due reflexive caution and ironic sensitivity general messages can be drawn from the observations of particular substantive contexts In particular claims that we are moving to a virtual society need to be tempered by a reassessment of connections between what counts as real and virtual This book will appeal to students and researchers in a very wide range of disciplines both within and beyond the social sciences and management and to all practitioners struggling with the realities of the new virtual technologies
