Special Committee on Aging,1981 Social Security and Early Retirement Robert Fenge,Pierre Pestieau,2005 Theoretical and empirical analysis of the relationship between retirement decision and pension systems with policy recommendations for reversing the current trend toward early retirement The contrasting trends toward earlier retirement and greater longevity have resulted in steadily increasing retirement costs over the last forty years One important factor influencing early retirement decisions is the expansion of retirement benefits but studies predict that most countries particularly those with early retirement incentives will be unable to meet future pension and social security obligations In this timely CESifo volume Robert Fenge and Pierre Pestieau examine empirical and theoretical evidence that explains why early retirement has become such a burden for social security systems and suggest pension system reforms that will reverse the trend Drawing on evidence from the European Union with comparisons to other industrialized countries including the United States and Canada the authors demonstrate that the effective retirement age is influenced by social security regulations such as a change in eligibility age and discuss ways of measuring these embedded incentives Fenge and Pestieau examine the implicit taxes on prolonged working life from normative and political economy perspectives They discuss optimal payroll tax rates that minimize distortions of labor supply and retirement decisions and consider alternative ways to finance benefits including consumption and capital income taxation They discuss why policies are designed to discourage employment among older workers and why reforms to counter this often meet resistance They demonstrate contrary to the belief of many European governments that pushing older workers into retirement does not free jobs for young unemployed workers They show that the gap between salaries and productivity is an incentive for employers to rid themselves of older workers and argue that governments should not support this behavior by compensating older workers for the difference between severance payments and salaries in early retirement programs Sustaining Social Security in an Era of Population Aging John A. Turner,2016-09-08 Social Security currently lacks the financing to pay for benefits already promised and the Congressional Budget Office projects that insolvency will occur in 2031 While many proposals for fixing the system have been floated most are little more than bandages that stem the bleeding but fail to address the underlying malady As John A Turner points out in Sustaining Social Security in an Era of Population Aging T he fundamental problem is that the current demographic era where the old age dependency ratio the ratio of Social Security beneficiaries to covered workers is increasing the Social Security benefit formula causes benefits to grow faster than the tax revenues that finance them While seemingly a problem of demographics which can t be fixed Turner argues that the solution to the long term health of Social Security lies in politically acceptable periodic reforms of the formula used to determine benefits Specifically he endorses a set of reforms that address

increased life expectancy the growing relationship between income and life expectancy the decline in the physical demands of jobs the rise in income inequality and the increasing poverty seen among the older population *Increasing the Early Retirement Age Under Social Security* Michael V. Leonesio, Denton R. Vaughan, Bernard Wixon, 2009 Policies that would reduce or eliminate Social Security benefits for early retirees could have adverse consequences for older workers in poor health This Brief documents the health and financial status of people aged 62-64 who receive reduced Social Security benefits as retired workers spouses and widowed spouses Although most of these early retirees do not have a serious health condition almost half report some type of health problem About 25 percent are estimated to have health problems that substantially impair their ability to work When compared to other early retirees those who have severe health problems have lower lifetime earnings are more reliant on Social Security benefits have fewer financial assets and are less likely to have health insurance About 12 percent of early retirees are estimated to meet the strict disability criteria for receiving Social Security Disability Insurance DI or Supplemental Security Income SSI Many of them do not receive DI because they lack sufficient work histories to qualify Another larger subgroup does not meet the test of low income and limited financial assets for means tested SSI disability benefits About as many 62-64 year olds classified as severely disabled receive early retirement benefits as receive disability benefits from DI or SSI The evidence suggests that Social Security early retirement benefits serve as a substantial albeit unofficial disability program for some early retirees *Financing Problems of the Social Security System* United States. Social Security Programs and Retirement around the World Jonathan Gruber, David A. Wise, 2009-02-15 The future of Social Security is troubled both in the United States and in most other developed countries with aging populations As improvements in health care and changes in life styles enable retirees to live longer than ever before the stress on national budgets will increase substantially In *Social Security Programs and Retirement around the World* Jonathan Gruber David A. Wise and experts in many countries examine the consequences of reforming retirement benefits in a dozen nations Drawing on the work of an international group of noted economists the editors argue that social security programs provide strong incentives for workers to leave the labor force by retiring and taking the benefits to which they are entitled By penalizing work social security systems magnify the increased financial burden caused by aging populations thus contributing to the insolvency of the system This book is a model of comparative analysis that evaluates the effects of illustrative policies for countries facing the impending rapid growth of social security benefits Its insights will help inform one of the most pressing debates **Impacts of the Current Social Security System** United States. The Social Security Early Retirement Benefit as a Safety Net John Bound, 2011 In this paper we used the Health and Retirement Study to examine the health and economic status of those who collect Social Security retirement benefits prior to the full retirement age We used a propensity score reweighting method to estimate the fraction of early retirees who use early retirement benefits as a safety net against deteriorating health and who might be induced to apply for disability benefits SSDI or retire without income replacement if the generosity or availability of early retirement benefits were reduced We find that while the majority of early retirees would likely not qualify for disability benefits approximately one in five have health characteristics similar to SSDI beneficiaries and thus might not be able to replace losses in benefit income with labor income

The Future of Social Security Alicia H. Munnell, 2010-12-01 From a modest beginning in 1935 to an income replacement scheme for workers in commerce and industry the social security system has grown to cover 90 percent of working Americans It now pays 78 billion a year in benefits and is obligated to pay 4 trillion in future retirement benefits to workers now covered With a projected tax rate of 30 percent of gross wages by the year 2050 to meet its obligations under current law the system in the author s words is at the most crucial juncture of its forty year life This comprehensive review and analysis the thirteenth in the Brookings series of Studies in Social Economics discusses social security in relation to other sources of retirement income and clarifies its financing problem benefit structure and ambivalent goals It deals with two main financing questions First will the payroll tax yield the revenue needed to pay benefits as the retired population rises as a fraction of the working population Second is the

regressive social security tax really the best source of revenue for a system with welfare components such as the minimum benefit and dependents benefits Though such benefits are viewed as progressive they are not paid according to need They meet neither the income redistribution requirements nor the individual equity goals of the social security program The author provides a comprehensive account of the benefit structure and clarifies its relation not only to the basic goals of social security but also to the country s three tiered system of income security She offers recommendations for eliminating an irrational and correctable feature of the benefit formula for lowering the dependency ratio and most important for a definition of goals The Future of Social Security for this Generation and the Next United States. Retirement Responses to Early Social Security Benefit Reductions Olivia S. Mitchell,John W. Phillips,2000 This paper evaluates potential responses to reductions in early Social Security retirement benefits Using the Health and Retirement Study HRS linked to administrative records we find that Social Security coverage is quite uneven in the older population one quarter of respondents in their late 50 s lacks coverage under the Disability Insurance program and one fifth lacks coverage for old age benefits Among those eligible for benefits respondents who subsequently retired early appear quite similar initially to those who later filed for normal retirement benefits but both groups were healthier and better educated than those who later filed for disability benefits Next we investigate the potential impact of curtailing and then

eliminating early Social Security benefits A life cycle model of retirement behavior provides estimated parameters used to simulate the effects of cutting early Social Security benefits on retirement pathways We find that cutting early Social Security benefits would boost the probability of normal retirement by twice as much as it would the probability of disability retirement
