Anthrozoology Geoff Hosey, Vicky Melfi, 2018-11-30. Anthrozoology, the study of human-animal interactions, has experienced substantial growth during the past 20 years and it is now timely to synthesise what we know from empirical evidence about our relationships with both domesticated and wild animals. Two principal points of focus have become apparent in much of this research. One is the realisation that the strength of these attachments not only has emotional benefits for people but confers health benefits as well, such that a whole area has opened up of using companion animals for therapeutic purposes. The other is the recognition that the interactions we have with animals have consequences for their welfare too and thus impact on their quality of life. Consequently we now study HAIs in all scenarios in which animals come into contact with humans, whether as pets, companions, farm livestock, laboratory animals, animals in zoos or in the wild. This topical area of study is of growing importance for animals in animal management, animal handling, animal welfare and applied ethology courses and also for people within psychology, anthropology and human geography at both the undergraduate and postgraduate level. It will therefore be of interest to students, researchers and animal managers across the whole spectrum of human-animal contact.

Understanding, Assessing and Improving Farm Animal Welfare Luc Mounier, 2024-10-07. Improving welfare in farmed animals is good for productivity, consumer demand and of course the animals themselves. Covering the current scientific knowledge on the sensitivity and consciousness of animals, this translation of the *Le Bien tre des animaux* d'levage series reviews how to understand, assess and then improve farm animal welfare. Beginning with the philosophical and legal history of the consideration of their well-being, it synthesizes this information to build a common reference so that we all share the same notion of what animal welfare actually is. It then evaluates the welfare assessment process which must be as reliable and objective as possible and requires the use of appropriate indicators. Fully outlined in reference documents, these are summarized at the level of specific farming situations for easy reference. Concluding with the different ways of improving animal welfare, the book takes a holistic approach considering the animals' physical and social environment, the integrated management of their health, the relationship between human and animal, the management of animal suffering and treatment of animals during transportation and slaughter. Suitable for students and researchers of animal agriculture, animal science and veterinary medicine, this book provides an approachable and comprehensive coverage of this important topic.

Animal-centric Care and Management Dorte Bratbo Sørensen, Sylvie Cloutier, Brianna N. Gaskill, 2020-10-14. The concept of the 3Rs (Refinement, Reduction and Replacement) has been used as a framework for improving the welfare of laboratory animals for the last half century. By establishing an animal-centric view on housing and

management Animal centric Care and Management Enhancing Refinement in Biomedical Research takes Russell and Burch's definition of Refinement as elimination of inhumanities and goes further Rather than fitting animals into experimental conditions it encourages readers to adjust conditions to better meet the behavioral emotional physical and physiological needs and preferences of the animals The team of expert authors from the fields of laboratory animal science ethology biology as well as animal training provide ideas for creating housing conditions and handling procedures that induce to the best of current abilities and knowledge a long term positive state of mind in the animals under our care This book is written for animal caretakers animal health technicians researchers animal facility managers laboratory animal veterinarians and anyone who engages in work with living experimental animals or is interested in the continuous improvement of laboratory animal welfare This interdisciplinary guide will act as a catalyst resulting in multiple viewpoints and fields collaborating to optimize laboratory animal welfare
