The New Dialectic And Marx's Capital Historical Materialism Series 1:

The New Dialectic and Marx's Capital Chris Arthur, 2021-08-04 This book argues that the dialectic of Marx's Capital has a systematic rather than historical character. It sheds new light on Marx's great work while going beyond it in many respects.

Marx's Concept of the Alternative to Capitalism Peter Hudis, 2012-07-25 This is the first book-length study of Marx's concept of the alternative to capitalism. It shows that his critique of capital flowed from a commitment to a specific vision of the kind of human relations that define a new society.

How Language Informs Mathematics Dirk Damsma, 2019-11-11 In *How Language Informs Mathematics* Dirk Damsma shows how Hegel's and Marx's systematic dialectical analysis of mathematical and economic language helps us understand the structure and nature of mathematical and capitalist systems. More importantly, Damsma shows how knowledge of the latter can inform model assumptions and help improve models. His book provides a blueprint for an approach to economic model building that does away with arbitrarily chosen assumptions and is sensitive to the institutional structures of capitalism. In light of the failure of mainstream economics to understand systemic failures like the financial crisis and given the arbitrary character of most assumptions in mainstream models such an approach is desperately needed.

Critical Theory and the Critique of Political Economy Werner Bonefeld, 2014-05-08 Subversive thought is none other than the cunning of reason when confronted with a social reality in which the poor and miserable are required to sustain the illusion of fictitious wealth. Yet this subsidy is absolutely necessary in existing society to prevent its implosion. The critique of political economy is a thoroughly subversive business. It rejects the appearance of economic reality as a natural thing, argues that economy has not independent existence, expounds economy as political economy, and rejects as conformist rebellion those anti-capitalist perspectives that derive their rationality from the existing conceptuality of society. Subversion focuses on human conditions. Its critical subject is society unaware of itself. This book develops Marx's critique of political economy as negative theory of society. It does not conform to the patterns of the world and demands that society rid itself of all the muck of ages and founds itself anew.

Marxism and Ecological Economics Paul Burkett, 2006-03-01 This book undertakes the first general assessment of ecological economics from a Marxist point of view and shows how Marxist political economy can make a substantial contribution to ecological economics. The analysis is developed in terms of four basic issues: 1. nature and economic value 2. the treatment of nature as capital 3. the significance of the entropy law for economic systems 4. the concept of sustainable development. In each case it is shown that Marxism can help ecological economics fulfill its commitments to multi-disciplinarity, methodological pluralism, and historical openness. In this way a foundation is constructed for a substantive dialogue between Marxists and ecological economists.

Marx and Contemporary Critical Theory Antonio Oliva, Ángel Oliva, Iván Novara, 2020-07-10 This edited volume brings together an international and interdisciplinary group of scholars to explore the traces of the idea of Real Abstraction in Marx's thought from the early to late writings as well as the theoretical and practical consequences of this notion in the capitalist

social system Divided into two main parts Part One reconstructs Marx's notion of Real Abstraction and the influences of earlier thinkers Berkeley Petty Franklin Feuerbach Hegel on his thoughts as well as the further elaborations of this concept in later Marxist thinkers Sohn Rethel Lukács Lefebvre Adorno and Postone Part Two then considers the reverberations of the notion in the field of critical theory from a more abstract critique of capitalist social relations to a more concrete understanding of historical movements Taken together the chapters in this volume offer a focused look at the concept of Real Abstraction in Marx

From Political Economy to Economics Dimitris Milonakis, Ben Fine, 2009-01-13 Economics has become a monolithic science variously described as formalistic and autistic with neoclassical orthodoxy reigning supreme So argue Dimitris Milonakis and Ben Fine in this new major work of critical recollection The authors show how economics was once rich diverse multidimensional and pluralistic and unravel the processes that lead to orthodoxy's current predicament The book details how political economy became economics through the desocialisation and the dehistoricisation of the dismal science accompanied by the separation of economics from the other social sciences especially economic history and sociology It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists historians and other social scientists This has resulted in an impoverished historical and social content within mainstream economics The book ranges over the shifting role of the historical and the social in economic theory the shifting boundaries between the economic and the non economic all within a methodological context Schools of thought and individuals that have been neglected or marginalised are treated in full including classical political economy and Marx the German and British historical schools American institutionalism Weber and Schumpeter and their programme of Social konomik and the Austrian school At the same time developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore The prime rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda This is done by treating economics as a social science once again rather than as a positive science as has been the inclination since the time of Jevons and Walras It involves transcending the boundaries of the social sciences but in a particular way that is in exactly the opposite direction now being taken by economics imperialism Drawing on the rich traditions of the past the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future

Marxist Class Theory for a Skeptical World Raju J Das, 2017-01-16 Marxist Theory of Class for a Skeptical World is a critique of some of the influential radical theories of class and presents an alternative approach to it This book critically discusses Analytical Marxist and Post structuralist Marxist theories of class and offers an alternative approach that is rooted in the ideas of Marx and Engels as well as Lenin and Trotsky It presents a materialist dialectical foundation for class theory and conceptualizes class at the trans historical level and at the level of capitalism It shows that capitalism is an

objectively existing articulation of exchange property and value relations between capital and labour at multiple geographical scales and that the state is an arm of class relation It draws out implications of class relations for consciousness and political power of the proletariat **From Radical Marxism to Knowledge Socialism** Michael A. Peters, Liz Jackson, 2021-12-22

This volume examines the place of Marxist theory in the history of the journal *Educational Philosophy and Theory* primarily through the selection and exploration of typical and significant articles exploring Marxist related themes in the journal over time The title *From Radical Marxism to Knowledge Socialism* reflects this historical approach In the 1960s and 1970s Marxism was considered to be a radical extreme political theory while western liberalism and a free market economy were largely taken for granted as natural phenomena in western philosophy of education and in the journal More recently educational theorists have begun to explore trends related to the neoliberal age Paradoxically such trends include the move toward knowledge socialism which decenters the normative presuppositions of knowledge capitalism as the latest iteration of western liberalism The volume begins with an introductory chapter that examines the history of Marxism in western philosophy and philosophy of education The rest of the book features works selected from the journal that further illustrate the evolution of Marxist theoretical perspectives in the field over time This collection thus gives a sense of the range and extent of Marxist inspired thinking in educational philosophy and theory This book will be of interest to students and scholars of educational philosophy and theory and others who are interested in exploring in depth the evolution of key themes in this field over time including liberalism ideology Marxism neoliberalism knowledge construction capitalist and socialist schooling and other aspects of economic analysis in education *The Digitally Disposed* Seb Franklin, 2021-06-22 Locates the deep

history of digitality in the development of racial capitalism Seb Franklin sets out a media theory of racial capitalism to examine digitality's racial capitalist foundations *The Digitally Disposed* shows how the promises of boundless connection flexibility and prosperity that are often associated with digital technologies are grounded in racialized histories of dispossession and exploitation Reading archival and published material from the cybernetic sciences alongside nineteenth century accounts of intellectual labor twentieth century sociometric experiments and a range of literary and visual works *The Digitally Disposed* locates the deep history of digitality in the development of racial capitalism Franklin makes the groundbreaking argument that capital's apparently spontaneous synthesis of so called free individuals into productive circuits represents an informatics of value On the one hand understanding value as an informatic relation helps to explain why capital was able to graft so seamlessly with digitality at a moment in which it required more granular and distributed control over labor the moment that is often glossed as the age of logistics On the other hand because the informatics of value sort populations into positions of higher and lower capacity value and status understanding their relationship to digitality requires that we see the digital as racialized and gendered in pervasive ways Ultimately *The Digitally Disposed* questions the universalizing assumptions that are maintained remade and intensified by today's dominant digital technologies Vital and far
