Basic Properties of III-V Devices - Understanding Mysterious Trapping Phenomena Kompa, Günter, 2014 Trapping effects in III V devices pose a great challenge to any microwave device modeler Understanding their physical origins is of prime importance to create physics related reliable device models The treatment of trapping phenomena is commonly beyond the classical higher education level of communication engineers This book provides any basic material needed to understand trapping effects occurring primarily in GaAs and GaN power HEMT devices As the text material covers interdisciplinary topics such as crystal defects and localized charges trap centers and trap dynamics deep level transient spectroscopy and trap centers in passivation layers the book will be of interest to graduate students of electrical engineering communication engineering and physics as well as materials device and circuit engineers in research and industry

Handbook of Emerging Materials for Semiconductor Industry Young Suh Song, Laxman Raju Thoutam, Shubam Tayal, Shiromani Balmukund Rahi, T. S. Arun Samuel, 2024-05-31 The proposed book will be a one stop place for all the young material researchers to understand the recent and reliable material making process characterization

and reliability test tools The proposed book is designed to provide basic knowledge to understand and analyse structure property relationship for reliable emerging material systems for next generation of semiconductor technologies The book is suggested to engineers and scientists across the world working on various new and novel materials for reliable semiconductor device applications The book is expected to serve as a reference guide for young scientists and engineers in the field of material science and electronic engineers to acquire latest state of art experimental and computational tools to encourage their research activities Since the scope of the book is generic the book can be referred by all the students of science and engineering students to create a common awareness about the latest material systems and state of art characterization tools that have been broadly utilized to study the physical and chemical properties of different material systems It introduces the readers to a wide variety of new emerging materials systems including their synthesis fabrication measurement reliability test modelling and simulations with in depth analysis of selective applications This book contains the state of art research updates in the various fields of semiconductor artificial intelligence AI bio sensor biotechnology with respect to reliable material research Therefore various students who are eager to get a job in semiconductor AI Autonomous car biotechnology are strongly recommended to read this book and learn about related state of art knowledge
