LeMay, 2015-07-29 A unique resource for the general public and students interested in immigration and public health this book presents a comprehensive history of public health and draws 10 key lessons for current immigration and health policymakers The period of 1820 to 1920 was one of mass migration to the United States from other nations of origin This century long period served to develop modern medicine with the acceptance of the germ theory of disease and the lessons learned from how immigration officials and doctors of the United States Marine Hospital Service USMHS confronted six major pandemic diseases bubonic plague cholera influenza smallpox trachoma and yellow fever This book provides a narrative history that relates how immigration doctors of the USMHS developed devices and procedures that greatly

influenced the development of public health. It illuminates the distinct links between immigration policy and public health policy and distinguishes ten key lessons learned nearly 100 years ago that are still relevant to coping with current public health policy issues. By re-examining the experiences of doctors at three U.S. immigration quarantine stations: Angel Island, Ellis Island, and New Orleans in the early 19th century through the early 20th century, *Doctors at the Borders: Immigration and the Rise of Public Health* analyzes the successes and failures of these medical practitioners pioneering efforts to battle pandemic diseases and identifies how the hard-won knowledge from that relatively primitive period still informs how public health policy should be written today. Readers will understand how the USMHS doctors helped shape the very development of U.S. public health and modern scientific medicine and see the need for international cooperation in the face of today's global threats of pandemic diseases.

*The Fight Over Food* Wynne Wright, Gerard Middendorf, 2010-11. One problem with the food system is that price is the bottom line rather than having the bottom line be land stewardship, an appreciation for the environmental and social value of small-scale family farms or for organically grown produce. Interview with farmer in Skagit County, Washington. For much of the later twentieth century, food has been abundant and convenient for most residents of advanced industrial societies. The luxury of taking the safety and dependability of food for granted pushed it to the back burner in the consciousness of many. Increasingly, however, this once-taken-for-granted food system is coming under question on issues such as the humane treatment of animals, genetically engineered foods, and social and environmental justice. Many consumers are no longer content with buying into the mainstream commodity-driven food market on which they once depended. Resistance has emerged in diverse forms, from protests at the opening of McDonald's restaurants worldwide to ever-greater interest in alternatives such as CSAs, community-supported agriculture, fair trade, and organic foods. The food system is increasingly becoming an arena of struggle that reflects larger changes in societal values and norms as expectations are moving beyond the desire for affordable, convenient foods to a need for healthy and environmentally sound alternatives. In this book, leading scholars and scholar-activists provide case studies that illuminate the complexities and contradictions that surround the emergence of a new day in agriculture. The essays found in *The Fight Over Food* analyze and evaluate both the theoretical and historical contexts of the agrifood system and the ways in which trends of individual action and collective activity have led to an accumulation of resistance that greatly affects the mainstream market of food production. The overarching theme that integrates the case studies is the idea of human agency and the ways in which people purposefully and creatively generate new forms of action or resistance to facilitate social changes within the structure of predominant cultural norms. Together, these studies examine whether these combined efforts will have the strength to create significant and enduring transformations in the food system.

*A World Perspective Through 21st Century Eyes* R. K. Koslowsky, 2004. As a community of citizens in the twenty-first century, we are fortunate to have emerged from the biological evolution of the past million years and the cultural evolution of the past ten thousand years. We have enjoyed an abundance of

time and freedom to explore the why and how things work and continue to push the limits of the present technological evolution A World Perspective through 21st Century Eyes is not a history textbook or a science history book It is not a treatise on philosophy or theology Rather it is a book on the major themes in the evolution of man and the impact of science thereto It is a book with the major theme addressing the impact of science on society one in which the technical community has not had time to digest and reflect upon during the past fifty years With the time pressures of the day and in the specializations in which we operate there is precious little surplus energy available to us for leisure activity of our choosing I trust that this treatment will sketch a broad outline that the scientific and technological community has had on society over the past five thousand years and potential areas where further impacts will be made in the next one hundred years To this effort I believe the reader will find his or her surplus energy well spent An engineer to which my life s training was aimed is expected to have a complete and thorough knowledge of some subjects This is true for most of us in the technical community therefore it is also true that most of us choose not to write about many topics of which we are not master I feel this separation of subjects and isolation of scientists and technologists does a disservice to others in other disciplines who look for different views in order to maintain a balanced perspective on the myriad of issues confronting them each day Those of us who have grown up in the Western Culture without a technical education may find this discussion exciting in the different way it is broached Just as an engineer appreciates the beauty of the Golden Gate Bridge and the precision of the clock the inspiration from watching the setting sun reading a biblical passage or viewing a Bouguereau painting can motivate and enlighten that same engineer In this way I aim to provide the reader either technical or non technical with an appreciation of the evolving world from the viewpoint of one who has been technically trained I cannot reproduce the sunset paint or sing to inspire but I hope these insights motivate you to pause and consider your area of expertise with the aim for you to contribute that which has inspired and motivated you
