Louis Valentine Pirsson

Skeleton Tails:

Primate Anatomy Friderun Ankel-Simons, 2000 This work reviews the biology of all living primates including humans It provides a taxonomic list of all living genera and species which are described with respect to their adaptation in various environmental and geographic habitats

Herpetological Osteopathology Bruce M. Rothschild, Hans-Peter Schultze, Rodrigo Pellegrini, 2012-01-05 As scientific analysis of testable hypotheses has replaced the speculative approach to study of bone disease in recent and fossil amphibians and reptiles the field has advanced from simply reporting observations to analyzing their implications This process is predicated upon a reproducible data base which explains diagnoses the nature of bony alterations and a secure review of the literature Thereby hangs the rub The herpetological literature are difficult to access let alone read and are scattered through many prominent and eclectic journals and in the lay literature While older diagnoses often have not stood the test of time the clarity of report descriptions usually allows confident identification of the underlying pathology

Chirotheres Hendrik Klein, Andrew B. Heckert, 2023-07-25 Comprehensive in detail and worldwide in scope Chirotheres is the definitive compendium of what is known about the five toed footprints of Triassic archosaurs ancestors of the crocodiles Sandstone slabs with extensive trackways have been known for almost two centuries and are highlights in museum exhibits around the globe These trackways provide direct insight into the locomotion and behavior of the fascinating reptiles that made these tracks and together with known skeletons they allow a richer reconstruction of chirothere lifestyle than is possible from bones alone Written by expert researchers in the fields of vertebrate ichnology vertebrate paleontology and scientific illustration Chirotheres explores the various facets of chirothere research including the history of their study footprint formation and preservation the bone record the environment and lifestyle of chirotheres and finally their disappearance at the end of the Triassic Chirotheres also features a global compendium of track collections with chirothere material including specimen numbers detailed phylogenetic definitions of track makers and extensive measurements from key chirothere tracks and trackways It represents an invaluable resource of anyone interested in these ancient animals

Tarsiers Patricia C. Wright, Elwyn L. Simons, Sharon Gursky-Doyen, 2003 Tarsiiformes or tarsiers for short are a group of living species of special interest to primatologists because their combination of derived and ancient characters make them pivotal to understanding the roots of primate evolution These small bodied nocturnal solitary creatures resemble lower primates in their behavior but genetically DNA evidence aligns them more closely with higher primates such as monkeys apes and humans These astounding creatures exhibit an ability found in no other living mammal3 4 they can turn their heads 180 degrees in either direction to see both prey and predators The world's only exclusive carnivorous primate they eat live food primarily insects but the occasional vertebrate such as lizards snakes or frogs will also do This unique combination of behavior and anatomy makes the tarsier an especially interesting and controversial animal for study among primate behaviorists evolutionists and taxonomists who view the tarsiers as living fossils that link past and

present lower and higher primates in the long chain of evolutionary history This new volume presents alternative and contrasting perspectives on the most debated questions that have arisen in tarsier studies Top researchers bring together perspectives from anatomical behavioral genetic and conservation studies in this new and exciting addition to the understanding of primate evolution This book is a volume in the Rutgers Series on Human Evolution edited by Robert Trivers Lee Cronk Helen Fischer and Lionel Tiger

Dinosaurs, Spitfires, and Sea Dragons Christopher McGowan, 1991 McGowan attempts to solve some of the enduring mysteries about dinosaurs and other prehistoric reptiles making fascinating comparisons between living and extinct animals and drawing on science and engineering concepts to explain the similarities between the aerodynamics of pteradons and Spitfire planes Illustrations

Vitt, 2003-09-24 From tiny to gigantic from drab to remarkably beautiful from harmless to venomous lizards are spectacular products of natural selection This book lavishly illustrated with color photographs is the first comprehensive reference on lizards around the world Accessible scientifically up to date and written with contagious enthusiasm for the subject *Lizards Windows to the Evolution of Diversity* covers species evolution diversity ecology and biology Eric R Pianka and Laurie J Vitt have studied and photographed members of almost all lizard families worldwide and they bring to the book a deep knowledge based on extensive firsthand experience with the animals in their natural habitats Part One explores lizard lifestyles answering such questions as why lizards are active when they are why they behave as they do how they avoid predators why they eat what they eat and how they reproduce and socialize In Part Two the authors take us on a fascinating tour of the world's manifold lizard species beginning with iguanians an evolutionary group that includes some of the most bizarre lizards the true chameleons of Africa and

Madagascar We also meet the glass lizard able to break its tail into many highly motile pieces to distract a predator from its body lizards that can run across water and limbless lizards such as snakes Part Three gives an unprecedented global view of evolutionary trends that have shaped present day lizard communities and considers the impact of humans on their future A definitive resource containing many entertaining anecdotes this magnificent book opens a new window to the natural world and the evolution of life on earth The Penny Cyclopædia of the Society for the Diffusion of Useful Knowledge ,1838 V 1 20

Molecular Origins of Brain and Body Geometry Antonio Lima-de-Faria,2014-10-07 New concepts arise in science when apparently unrelated fields of knowledge are put together in a coherent way The recent results in molecular biology allow to explain the emergence of body patterns in animals that before could not be understood by zoologists There are no fancy curiosities in nature Every pattern is a product of a molecular cascade originating in genes and a living organism arises from the collaboration of these genes with the outer physical environment Tropical fishes are as startling in their colors and geometric circles as peacocks Tortoises are covered with the most regular triangles squares and concentric circles that can be green brown or yellow Parallel scarlet bands are placed side by side of black ones along the body of snakes Zebras and

giraffes have patterns which are lessons in geometry with their transversal and longitudinal stripes their circles and other geometric figures Monkeys like the mandrills have a spectacularly colored face scarlet nose with blue parallel flanges and yellow beard All this geometry turns out to be highly molecular The genes are many and have been DNA sequenced Besides they not only deal with the coloration of the body but with the development of the brain and the embryonic process A precise scenario of molecular events unravels in the vertebrates It may seem far fetched but the search for the origin of this geometry made it mandatory to study the evolution of matter and the origin of the brain It turned out that matter from its onset is pervaded by geometry and that the brain is also a prisoner of this ordered construction Moreover the brain is capable of altering the body geometry and the geometry of the environment changes the brain Nothing spectacular occurred when the brain arrived in evolution Not only it came after the eye which had already established itself long ago but it had a modest origin It started from sensory cells on the skin that later aggregated into clusters of neurons that formed ganglia It also became evident that pigment cells that decide the establishment of the body pattern originate from the same cell population as neurons the neural crest cells This is a most revealing result because it throws light on the power that the brain has to rapidly redirect the coloration of the body and to change its pattern Recent experiments demonstrate how the brain changes the body geometry at will and within seconds an event that could be hardly conceived earlier Moreover this change is not accidental it is related to the surrounding environment and is also used as a mating strategy Chameleons know how to do it as well as flat fishes and octopuses No one would have dared to think that the brain had its own geometry How could the external geometry of solids or other figures of our environment be apprehended by neurons if these had no architecture of their own Astonishing was that the so called simple cells in the neurons of the primary visual cortex responded to a bar of light with an axis of orientation that corresponded to the axis of the cell s receptive field We tend to consider our brain a reliable organ But how reliable is it From the beginning the brain is obliged to transform reality Brain imagery involves form color motion and sleep Unintentionally these results led to unexpected philosophical implications Plato s pivotal concept that forms exist independently of the material world is reversed Atoms have been considered to be imaginary for 2 000 years but at present they can be photographed one by one with electron microscopes The reason why geometry has led the way in this inquiry is due to the fact that where there is geometry there is utter simplicity coupled to rigorous order that underlies the phenomenon where it is recognized Order allows variation but imposes at the same time a canalization that is patent in what we call evolution *Investigating Science with Dinosaurs* Craig Munsart, 1993-03-15
