Application Acceleration and WAN Optimization Fundamentals Ted Grevers Jr., Joel Christner CCIE No. 15311, 2012-01-10 IT organizations face pressure to increase productivity, improve application performance, support global collaboration, improve data protection, and minimize costs. In today's WAN centered environments, traditional LAN oriented infrastructure approaches are insufficient to meet these goals. *Application Acceleration and WAN Optimization Fundamentals* introduces a better solution integrating today's new generation of accelerator solutions to efficiently and effectively scale networks beyond traditional capabilities while improving performance and minimizing costs through consolidation. Ted Grevers and Joel Christner begin by reviewing the challenges network professionals face in delivering applications to globally distributed workforces. You learn how accelerators are transforming application business models, enabling IT departments to centralize and consolidate resources while also delivering consistently superior performance. Grevers and Christner show how to identify network consumers, prioritize traffic, and guarantee appropriate throughput and response times to business critical applications. You learn how to use quality of service techniques such as packet

classification and marking and traffic policing queuing scheduling and shaping Next you compare options for integrating accelerators and optimization services into your network and for optimizing content delivery The authors show how to address application protocol related performance problems that cannot be resolved through compression or flow optimization alone In the final chapter the authors walk you through several real world scenarios for utilizing accelerator technology Ted Grevers Jr is the solution manager for the Cisco Video IPTV Systems Test and Architecture C VISTA team He has extensive experience in the content delivery network CDN market focusing on enterprise and service provider content delivery and application optimization needs Joel Christner CCIE No 15311 is the manager of technical marketing for the Cisco Application Delivery Business Unit ADBU He has extensive experience with application protocols acceleration technologies LAN WAN infrastructure and storage networking Grevers and Christner are key contributors to the design and architecture of Cisco application delivery and application acceleration solutions Provide high performance access to remote data content video rich media and applications Understand how accelerators can improve network performance and minimize bandwidth consumption Use NetFlow to baseline application requirements and network utilization Ensure network resources are allocated based on business priorities Identify performance barriers arising from networks protocols operating systems hardware file systems and applications Employ application specific acceleration components to mitigate the negative impact of latency and bandwidth consumption Integrate content delivery networks CDN to centrally manage the acquisition security and distribution of content to remote locations Leverage WAN optimization technologies to improve application throughput mitigate the impact of latency and loss and minimize bandwidth consumption Optimize the performance of WANs and business critical WAN applications This book is part of the Cisco Press Fundamentals Series Books in this series introduce networking professionals to new networking technologies covering network topologies sample deployment concepts protocols and management techniques Category Cisco Press Networking Covers Network Optimization *Systems and Virtualization Management* Latifa Boursas, Mark Carlson, Wolfgang Hommel, Michelle Sibilla, Kes Wold, 2009-01-24 Second International Workshop SVM 2008 Munich Germany October 21 22 2008 Proceedings Architecting the Modern Network : Scalable and Secure Solutions for Today's Enterprises Sunil Jorepalli, Numerous sectors have been revolutionized machine learning ML which has made it possible to make decisions based on data and to automate processes This book examines the whole machine learning pipeline beginning with theoretical underpinnings and ending with implementation in the actual world In this section we discuss fundamental algorithms methodologies for training models assessment methods and optimization strategies There includes a comprehensive discussion on practical elements such as the preparation of data the engineering of features and the monitoring of hyperparameters In addition we examine the problems that pertain to the deployment of machine learning models which include scalability interpretability and ethical considerations Readers will be equipped with the abilities necessary to construct assess and deploy solid machine learning solutions in a variety of domains
