**in the US-Mexico Border Region** Cecilia Ballesteros Rosales, Scott Carter Carvajal, Jill Eileen Guernsey De Zapien, 2017-02-16 US Mexico border region area has unique social demographic and policy forces at work that shape the health of its residents as well as serves as a microcosm of migration health challenges facing an increasingly mobile and globalized world. This region reflects the largest migratory flow between any two nations in the world. Data from the Pew Research Center shows over the last 25 years there has never been lower than 140 000 annual immigrants from Mexico to the United States with peaks over 700 000. This migratory route is extremely hazardous due to natural e.g. arid and hot desert regions and human made barriers as well as border enforcement practices tied to socio political and geopolitical pressures. Also reflecting the national interdependency of public health and human services needs during the most recent five year period surveyed the migratory flow between the US and Mexico has equaled that of the flow of Mexico to the US both around 1.4 million persons. Of particular public health concern within the US Mexico region of both nations there is among the highest disparities in income education infrastructure and access to health care factors within the World Health Organization's conceptualization of the Social Determinants of Health and among the highest rates of chronic disease. For instance obesity and diabetes rates in this region are among the highest of those monitored in the world with adult population estimates of the former over 40% and estimates in some population sub groups for the latter over 20%. The publications reflected in this Research Topic all reviewed from experts in the field addressed many of the public health issues in the US Mexico Border Health Commission's Healthy Border 2020 objectives. Those objectives broad public health goals used to guide a diverse range of government research and community based stakeholders include Non Communicable Diseases including adult and childhood obesity related ones cancer Infectious Diseases e.g. tuberculosis HIV emerging diseases particularly mosquito borne illnesses Maternal and Child Health Mental Health Disorders and Motor Vehicle Accidents. Other relevant public health issues affecting this region for example environmental health binational health services coordination e.g. immunization the impact of migration throughout the Americas and globally in this region health issues related to the physical climate access to quality health care discrimination mistreatment and well being acculturative immigration stress violence substance use abuse oral health respiratory disease and well being from a social determinants of health framework are critical areas addressed in these publications or for future research. Each of these Research Topic publications presented applied solutions e.g. new programs technology or infrastructure and/or public health policy recommendations relevant to each public health challenge addressed.

Handbook of Latin American Studies v 57      **HIV/AIDS in Memory, Culture and Society** Alicia Castillo Villanueva, Angelos Bollas, 2024-07-08 This volume examines the role of culture in developing social, cultural and political discourses of HIV/AIDS from a contemporary viewpoint. In doing so, the memory of HIV/AIDS is a powerful tool to examine representations of the past and connect them with future debates. This reassessment of HIV/AIDS explores the most appropriate way to come to terms with a past that involved a negative stigmatised and marginalised representation. Therefore, remembering plays a key role in generating collective memory which allows for the exchange of mnemonic content between individual minds, creates discourses on memory and commemoration, and disseminates versions of the past that may affect the representation of HIV/AIDS in the future. Indeed, rewriting about the past also means assessing our responsibility towards the present and the potential of transmission to future generations, especially in times of pandemics      **VIH/SIDA** Odalys García Trujillo, 1998

**Más allá del SIDA** María del Carmen Gorbea Robles, 2024-03-11 Han transcurrido 30 años desde que se reconocieron los primeros casos de SIDA. Durante las primeras dos décadas fueron establecidos la epidemiología y el cuadro clínico de la enfermedad y se desarrollaron potentes terapias antirretrovirales sin embargo, en los últimos cinco años, el progreso ha sido menos dramático. En la epidemia global del SIDA existen problemas vinculados con el diagnóstico y el tratamiento de los efectos relacionados con la terapia antirretroviral altamente activa: los efectos tóxicos y la resistencia a los fármacos. Situaciones que, en conjunto, proveen la base del tratamiento estructurado por supuesto que estos problemas no son triviales. Este libro busca transmitir aspectos prácticos de la importancia del manejo integral de los pacientes con VIH/SIDA, entendiendo por integral el no fragmentar al paciente consciente de que es una unidad indivisible mente, cuerpo y espíritu.
