Social Acceptability of Forest Conditions and Management Practices Bruce A. Shindler, 2002 *Defining Social Acceptability in Ecosystem Management*, 1996 **Defining Social Acceptability in Ecosystem Management** Mark W. Brunson, Linda E. Kruger, Catherine B. Tyler, Susan A. Schroeder, 1997-08 This compendium of papers was developed in response to the assumption that implementing an ecological approach to forest management requires an understanding of socially acceptable forestry what it is and the implications of doing it Perspectives from a variety of social science disciplines are presented which attempt to define social acceptability and examine the question from a public philosophical and ethical standpoint to determine whether the focus on social acceptability is an appropriate and useful one Charts and tables Bibliography **Social Acceptability of Forest Conditions and Management Practices** Bruce A. Shindler, Mark W. Brunson, George H. Stankey, 2003 **Northern Spotted Owl Management Plan in the National Forests (CA, OR, WA)**, 1992 *Multiaged Silviculture* Kevin O'Hara, 2014-08-28 This book presents the latest scientific and management information on multiaged silviculture an emerging strategy for managing forestry systems worldwide Over recent decades forest science and management have tended to emphasize plantation silviculture Whilst this clearly meets our wood production needs many of the world s forests need to be managed far less intensively and more flexibly in order to maintain their natural ecosystem functions together with the values inherent in those processes Developing multiaged management strategies for these complex forest ecosystems represents a global challenge to successfully integrate available science with sustainable management practices Multiaged Silviculture covers the ecology and dynamics of multiaged stands the management operations associated with regeneration tending and stocking control and the implications of this strategy on production genetic diversity and stand health It is primarily aimed at graduate level students and researchers in the fields of forestry and silviculture but will also be of relevance and use to all professional foresters and silviculturists **General Technical Report PNW-GTR**, 2004 Silviculture Ralph D. Nyland, 2016-05-13 Silviculture Concepts and Applications reflects a belief that all the tools of silviculture have a useful role in modern forestry Through careful analysis and creative planning foresters can address a wide array of commodity and nonmarket interests and opportunities while maintaining dynamic and resilient forests A landowner s needs circumstances and site conditions guide a silviculturist s judgment and decision making in finding the best ways to integrate the biologic ecologic economic financial and managerial administrative requirements at hand The Third Edition of this influential text provides a foundational basis for rigorous discussion of techniques The inclusion of numerous real world examples and balanced coverage of past and current practices broadens the concept of silviculture and the ways that managers can use it to address both traditional and emerging interests in forests A thorough discussion of new and proven interpretations increasingly directs the attention of foresters toward the role silviculture plays in creating maintaining rehabilitating and restoring forests that can sustain an expanding variety of

**Technical Report NRS-P** ,2006      *Public Acceptance of Disturbance-based Forest Management* Bruce A. Shindler,Angela L. Mallon,2009 This report examines public perspectives on disturbance based management conducted in the central Cascade Range in Oregon as part of the Blue River Landscape Strategy A mail survey to local residents was used to describe the publics understanding of this form of management identify perceived associated risks and potential barriers to implementation and the overall level of support for disturbance based practices Findings suggest the public generally supports the disturbance based concept particularly ecological benefits but many individuals are still uncertain about details and are withholding judgment until they see the outcomes of implementation Support is highly correlated with citizens past interaction with local managers Major concerns involve the amount of timber harvesting necessary to achieve objectives and the possibility that changing national politics may influence the consistency of agency policies toward disturbance based management      **Citizen-agency Interactions in Planning and Decisionmaking After Large Fires** Christine S. Olsen,2007 This report reviews the growing literature on the concept of agency citizen interactions after large wildfires Because large wildfires have historically occurred at irregular intervals research from related fields has been reviewed where appropriate This issue is particularly salient in the West where excess fuel conditions indicate that the large wildfires occurring in many states are expected to continue to be a major problem for forest managers in the coming years This review focuses on five major themes that emerge from prior research contextual considerations barriers and obstacles uncertainty and perceptions of risk communication and outreach and bringing communities together It offers ideas on how forest managers can interact with stakeholders for planning and restoration activities after a large wildfire Management implications are included      **Public Acceptance of Forest Conditions and Fuel Reduction Practices** Bruce A. Shindler,2003      *Contemporary wood utilization research needs in the western United States* ,2004      **Defining an Economics Research Program to Describe and Evaluate Ecosystem Services** J. D. Kline,2006 Balancing society s multiple and sometimes competing objectives regarding forests calls for information describing the direct and indirect benefits resulting from forest policy and management whether to address wildfire loss of open space unmanaged recreation ecosystem restoration or other objectives The USDA Forest Service recently has proposed the concept of ecosystem services as a framework for 1 describing the many benefits provided by public and private forests 2 evaluating the effects of policy and management decisions involving public and private forest lands and 3 advocating the use of economic and market based incentives to protect private forest lands from development The concept extends traditional economic theory regarding multiple forest benefits and the use of economic incentives to enhance their provision by emphasizing ecosystems as an organizing structure for benefits Although the emphasis on ecosystems is new challenges in evaluating ecosystem services are similar to those long faced by economists tasked with evaluating forest benefits 1 defining a typology of ecosystem

services 2 describing and measuring ecosystem services units or outputs and 3 describing and measuring ecosystem services per unit of values or social weights Progress within the Forest Service in applying the ecosystem services concept to forest policy and management will depend on knowing what information will suffice working across disciplines deciding on appropriate analytical frameworks defining the appropriate role of economic and market based incentives and adequately funding economics research

**Federal Ecosystem Management** James R. Skillen, 2015-10-23 For the better part of the last century preservation and multi use conservation were the watchwords for managing federal lands and resources But in the 1990s amidst notable failures and overwhelming needs policymakers land managers and environmental scholars were calling for a new paradigm ecosystem management Such an approach would integrate federal land and resource management across jurisdictional boundaries it would protect biodiversity and economic development and it would make federal management more collaborative and less hierarchical That at any rate was the idea Where the idea came from why ecosystem management emerged as official policy in the 1990s is half of the story that James Skillen tells in this timely book The other half Why over the course of a mere decade the policy fell out of favor This closely focused history describes an old system of preservation and multi use conservation ill equipped to cope with the new ecological legal and political realities confronting federal agencies Ecosystem management it was assumed would not demand choices between substantive and procedural needs Looming even larger in the push for the new approach was a shift of emphasis in both ecology and political science from stability and predictability to dynamism and contingency Ecosystem management offered more modest managerial goals informed by direct public participation as well as scientific expertise But as Skillen shows this purported balance proved to be the policy's undoing Different interpretations presented conflicting emphases on scientific and democratic authority By 2001 when both models had been tested the Bush administration faulted federal ecosystem management for running willy nilly all over the west and shelved the policy In this book Skillen gets at the truth behind these contrary interpretations and claims to clarify how federal ecosystem management worked and didn't and how many of the principles it embodied continue to influence federal land and resource management in the twenty first century How the policy's lessons apply to our politically and environmentally fraught moment is finally considerably clearer with this informed and thoughtful book in hand
