Talking Data Transcription And Coding In Discourse Research:

Talking Data Jane A. Edwards, Martin D. Lampert, 2014-02-25 This book presents the reader with a set of diverse carefully developed and clearly specified systems of transcription and coding arising from contrasting theoretical perspectives and presented as alternative choices situated within the theoretical domain most natural to each. The perspectives represented include first and second language acquisition, interethnic and crosscultural interaction, information structure and the study of discourse influences on linguistic expression. In the contributed chapters the designers of these systems provide a distillation of collective experiences from the past quarter century, telling in their own words their perspectives on language processes, how these perspectives have shaped their choice of methodology in transcription and coding of natural language and describing their systems in detail. Overview chapters by the editors then provide design principles and guidelines concerning issues pertinent to all systems, including such things as reliability, validity, ease of learning, computational tractability and robustness against error. The final chapter is a compendium of existing computerized archives of language data and information sources together with details concerning data access and use.

Transcribing Talk and Interaction

Christopher Joseph Jenks, 2011-08-31 Interest in transcript based research has grown significantly in recent years. Alongside this growth has been an increase in awareness of the empirical utility of naturalistic research on language use in interaction. However, a quick scan of the literature reveals that very few transcription books have been published in the past three decades. This is an astonishing fact given that there are perhaps hundreds of books published on spoken discourse analysis. This book aims to narrow this gap by providing an introduction to the theories and practices related to transcribing communication data. The book is intended for students with little to no knowledge of transcription work and/or instructors responsible for teaching introductory courses on transcript based research. Readers who are learning or teaching discourse, conversation analysis or similar analytic methods of investigation will find this book particularly helpful. The author, Christopher Jenks, has many years of experience teaching transcription work and analysis of communication data to postgraduate students and researchers. In addition to running workshops and giving presentations on similar topics at universities around the world, he has published widely in top international journals and has numerous other forthcoming publications.

When Listeners Talk Rod Gardner, 2001-01-01 Listeners are usually considered recipients in conversational interaction whose main activity is to take in messages from other speakers In this view the listening activity is separate from speaking Another view is that listeners and speakers are equal co participants in conversations who construct the talk together In support of this latter view one finds a group of vocalisations which are quintessentially listener talk little conversational objects such as uh huh oh mm yeah right and mm hm These utterances do not have meanings in a conventional dictionary sense but are nevertheless loaded with complex and subtle information about the stance listeners take to what they are hearing information that is gleaned not only from their phonetic form but also from their complex prosodic shape and their placement and timing within the flow of talk This book summarises eight of these objects and explores one mm in depth

Sound Patterns in Interaction Elizabeth Couper-Kuhlen, Cecilia E. Ford, 2004 This collection of original papers by eminent phoneticians linguists and sociologists offers the most recent findings on phonetic design in interactional discourse available in an edited collection The chapters examine the organization of phonetic detail in relation to social actions in talk in interaction based on data drawn from diverse languages Japanese English Finnish and German as well as from diverse speakers children fluent adults and adults with language loss Because similar methodology is deployed for the investigation of similar conversational tasks in different languages the collection paves the way towards a cross linguistic phonology for conversation The studies reported in the volume make it clear that language specific constraints are at work in determining exactly which phonetic and prosodic resources are deployed for a given purpose and how they articulate with grammar in different cultures and speech communities

The Social Psychology of Politics Victor C. Ottati, R. Scott Tindale, John Edwards, Fred B. Bryant, Linda Heath, Yolanda Suarez-Balcazar, Emil J. Posavac, 2012-12-06 Early studies of political behavior examined the sociological attitudinal and rational determinants of political behavior However none of these approaches provided a descriptive model of how people process political information and make political decisions under naturalistic conditions that involve limited cognitive capacity and motivation Fortunately contemporary approaches within the field of political psychology have begun to address these concerns Inspired by recent advances in the area of social psychology researchers are rapidly developing more realistic and detailed models of the psychological process that determines political judgements and behavior Early attempts to merely predict political behavior have been replaced by an attempt to describe the actual process whereby individuals gather interpret exchange and combine information to arrive at a political judgement or decision This volume provides comprehensive coverage of this

pioneering era of research in political psychology
