Talking Science:

Talking Science Wolff-Michael Roth, 2005-05-26 This book is about the fundamental nature of talk in school science Language as a formal system provides resources for conducting everyday affairs including the doing of science And while writing science is one aspect talking science may in fact constitute a much more important means by which we navigate and know the world the very medium through which we do science In Talking Science Wolff Michael Roth articulates a view of language that differs from the way science educators generally think about it Knowing language in this view is no longer distinct from knowing one's way around a particular section of the world It is a non representational view of language and dispenses with language as a barrier between the individual subject and the world it knows In addition the book includes detailed analyses from actual classrooms to exemplify what such a different approach means for science education The conclusion is that once we have learned new ways of articulating the world and talking about it we also have learned to handle this world more easily

Talking Science Adam Hart-Davis, 2005-08-05 Adam Hart Davis has interviewed some of the most influential scientists and thinkers of our time In this fascinating insight into modern science he presents the stories behind the science the difficulties behind the discoveries and the future of the findings as explained by the people themselves Adam Hart Davis talks with Jocelyn Bell Burnell Bath UK Sir Michael Berry Bristol UK Colleen Cavanaugh Harvard US Richard Dawkins Oxford UK Loren Graham MIT US Richard Gregory Bristol UK Eric Lander MIT US Lord May of Oxford UK John Maynard Smith Sussex UK Rosalind Picard MIT US Peter Raven St Louis US Sir Martin Rees Cambridge UK Eugenie Scott Oakland US Lewis Wolpert UCL UK

Talking Science Jay L. Lemke, 1990 Talking Science discusses the role of language in teaching and in communication of scientific and technical subjects It identifies and analyzes the many strategies teachers and students use to communicate about science and to influence one another's beliefs and behavior Special emphasis is placed on analyzing patterns of social interaction the role of language and semantics in communicating scientific concepts and the social values and interests which lie behind these patterns of communication Working from transcripts of recordings made in real science classrooms this volume goes beyond previous work on the organization of classroom discourse to show how the conceptual content of a specialized subject is actually communicated through the semantic patterns that teachers and students weave with language Modern techniques of discourse analysis are used to place the communication of science in the context of classroom lessons debates and disruptions Critical analysis further shows how a mystique of science is perpetuated in classrooms and identifies the hidden social interests it serves [How Science Works](#)

James D. Williams, 2011-04-21 [Routledge Revivals: Art and Artifact in Laboratory Science \(1985\)](#) Michael Lynch, 2017-09-20 First published in 1985 this book provides a descriptive study of social activities in a neurosciences laboratory Based on fieldwork conducted by the author in the laboratory during 1975 and 1976 and taking an ethnomethodological approach it focuses on the phenomenon of the social accomplishment of natural scientific order

Through the examination of shop work and shop talk in this environment it identifies an analyzable social basis in the local production of accounts of natural objects in laboratory research This work will be of interest to students and scholars of ethnomethodology and sociology
