Taller Y El Robot El:

Living with Robots Ruth Aylett, Patricia A. Vargas, 2023-05-02 The truth about robots two experts look beyond the hype offering a lively and accessible guide to what robots can and can't do There's a lot of hype about robots some of it is scary and some of it utopian In this accessible book two robotics experts reveal the truth about what robots can and can't do how they work and what we can reasonably expect their future capabilities to be It will not only make you think differently about the capabilities of robots it will make you think differently about the capabilities of humans Ruth Aylett and Patricia Vargas discuss the history of our fascination with robots from chatbots and prosthetics to autonomous cars and robot swarms They show us the ways in which robots outperform humans and the ways they fall woefully short of our superior talents They explain how robots see feel hear think and learn describe how robots can cooperate and consider robots as pets butlers and companions Finally they look at robots that raise ethical and social issues killer robots sexbots and robots that might be gunning for your job *Living with Robots* equips readers to look at robots concretely as human made artifacts rather than placeholders for our anxieties Find out Why robots can swim and fly but find it difficult to walk Which robot features are inspired by animals and insects Why we develop feelings for robots Which human abilities are hard for robots to emulate

Ethics for Robots Derek Leben,2018-07-17 Ethics for Robots describes and defends a method for designing and evaluating ethics algorithms for autonomous machines such as self driving cars and search and rescue drones Derek Leben argues that such algorithms should be evaluated by how effectively they accomplish the problem of cooperation among self interested organisms and therefore rather than simulating the psychological systems that have evolved to solve this problem engineers should be tackling the problem itself taking relevant lessons from our moral psychology Leben draws on the moral theory of John Rawls arguing that normative moral theories are attempts to develop optimal solutions to the problem of cooperation He claims that Rawlsian Contractarianism leads to the Maximin principle the action that maximizes the minimum value and that the Maximin principle is the most effective solution to the problem of cooperation He contrasts the Maximin principle with other principles and shows how they can often produce non cooperative results Using real world examples such as an autonomous vehicle facing a situation where every action results in harm home care machines and autonomous weapons systems Leben contrasts Rawlsian algorithms with alternatives derived from utilitarianism and natural rights libertarianism Including chapter summaries and a glossary of technical terms Ethics for Robots is essential reading for philosophers engineers computer scientists and cognitive scientists working on the problem of ethics for autonomous systems
