Gun Systems William Andrews,2023-06-30 Much has been written about the use of tanks in battle Little however has appeared about the gunnery systems that are at their core This book describes and examines the main gun systems of medium and heavy tanks from first use in 1916 in World War I to those fielded in numbers to the end of World War II in 1945 including tanks of the interwar period Specifically considered are guns of a caliber greater than 35 mm which have been deployed in numbers greater than 100 The emphasis is on guns mounted in turrets on heavier tracked armored fighting vehicles greater than 15 tonnes which were considered tanks There are though exceptions in that the naval 6 pounder guns in First World War British tanks as well as the 75 mm guns in French medium tanks of the same period all turretless are included The treatment of gun systems includes sighting and fire control equipment gun laying equipment mounts and the array of munitions fired as well as the actual gun including its barrel cradle breech firing mechanism sights and recoil system

Related to this are issues of gun handling loading and unloading ammunition design and rates of fire Also examined are the maximum impulse and energy generated by firing some of the munitions available that must be absorbed by the gun recoil system

Armor In Vietnam [Illustrated Edition] Frederick Eugene Oldinsky, 2015-11-06 Includes 24 maps This thesis begins with a brief history of armored vehicles from their earliest concepts to the modern battle tank of today It critically examines the decision not to include tank units with the first American combat forces deployed in Vietnam and the irrationality of that decision in light of a similar decision made prior to the Korean conflict Tanks were deployed in limited numbers in Vietnam in spite of a decision to the contrary and once there I proved their usefulness and their ability to perform in a tropical environment against an elusive enemy Examples of the tank's effectiveness in Vietnam are given and the feasibility of deploying major armored forces to that country is discussed

Problems created by insufficient armor are addressed as well as the limitations and vulnerabilities of tanks and other armored vehicles. Armor doctrine is traced from the tank's role in breaking the stalemate of World War I through the formative years of World War II and its application to the war in Vietnam. Since most armored weapons were designed primarily for conventional warfare, a number of modifications were required to adapt the weapons to an unconventional war. Some of the more significant modifications are described. Finally, lessons learned by the Vietnam experience and their future application are discussed. Concluding consideration in the paper is whether or not decision makers will need these lessons learned or continue to make the same mistakes.
