Tank Irrigation and Agricultural Development Peddakota Chiranjeevulu, 1992 **Systems approaches for agricultural development** Frits Penning de Vries, Paul Teng, Klaas Metselaar, 2012-12-06

The symposium In the next decades agriculture will have to cope with an ever increasing demand for food and raw basic materials on the one hand and with the necessity to use resources without further degrading or exhausting the environment on the other hand and all this within a dynamic framework of social and economic conditions Intensification sustainability optimizing scarce resources and climate change are among the key issues Organized thinking about future farming requires forecasting of consequences of alternative ways to farm and to develop agriculture The complexity of the problems calls for a systematic approach in which many disciplines are integrated Systems thinking and systems simulation are therefore indispensable tools for such endeavours About 150 scientists and senior research leaders participated in the symposium Systems Approaches for Agricultural Development SAAD at the Asian Institute of Technology AIT Bangkok Thailand in December 1991 The symposium had the following objectives to review the status of systems research and modeling in agriculture with special reference to evaluating their efficacy and efficiency in achieving research goals and to their application in developing countries to promote international cooperation in modeling and increase awareness of systems research and simulation The symposium consisted of plenary sessions with reviews of major areas in systems approaches in agriculture plus presentations in two concurrent sessions on technical topics of systems research Subjects of studies were from tropical and temperate countries

Political Economy of Agricultural Development in India Akina Venkateswarlu, 2021-11-17 The book covers Indian agricultural development from the colonial to the present period It examines how ruling class political ideology determined the agricultural policies from colonial rule It considers both quantitative and qualitative aspects in all periods colonial period to pre green revolution phase post green revolution phase early and late stages and post globalisation phase after 1991 India has achieved the ability to maintain food security through enough food grain buffer stocks to meet the enormous public distribution system But with India's entry into WTO in 1994 euphoria has been created among all types of farmers to adopt commercial crops like cotton cost intensive inputs Even food grain crops are grown through use of costly irrigation and chemicalised inputs But they lacked remunerative prices and so farmers began to commit suicides which crossed 3.5 lakh Government of India attributed this agrarian crisis to the technology fatigue and gave scope for second green revolution GR II GR I was achieved by public sector enterprise whereas the GR II as gene revolution is a result of private sector enterprise MNCs There is fear that opening up of the sector may lead to handover of the family farms to big agri multinationals GOI's proposal to double farmers income by 2022 is feasible only when the problems being faced by small marginal and tenant farmers are addressed in agricultural marketing credit and extension services Now it is time to go for suitable forms of cooperative collective agriculture as 85 percent of total cultivators are the small and marginal farmers This book is co published with Aakar Books

Gowda, 1998 *Climate Change and Agricultural Development* Udaya Sekhar Nagothu, 2016-07-15 Two of the greatest current challenges are climate change and variability and food security Feeding nine billion people by 2050 will require major efforts aimed at climate change adaptation and mitigation One approach to agriculture has recently been captured by the widely adopted term of Climate Smart Agriculture CSA This book not only explains what this entails but also presents practical on the ground studies of practices and innovations in agriculture across a broader spectrum including agroecology and conservation agriculture in less developed countries It is shown that CSA is not a completely new science and a number of its recommended technologies have been used for some time by local farmers all over the world What is relevant and new is the approach to exploit their adaptation and mitigation potential However a major limitation is the lack of evidence based knowledge that is necessary for policy makers to prepare strategies for adaptation and mitigation This book assembles knowledge of CSA agroecology and conservation agriculture and perspectives from different regions of the world to build resilient food systems The first part analyzes the concept opportunities and challenges and provides a global perspective drawing particularly on studies from Africa and Asia The second part of the book showcases results from various studies linked to soil water and crop

management measures from an ongoing program in India as well as experiences from other regions The third section assesses the needs for an enabling policy environment mainstreaming gender and some final recommendations for up scaling and or out scaling innovations

Water Resources and Agricultural Development in the Tropics Christopher J. Barrow, 2016-07-01 First published in 1988 There are many excellent texts on water supply and irrigation engineering irrigation economics agricultural development and the problems which often plague such efforts Few syntheses of such writings have been made despite a clear need for them from people interested in water resources and agricultural development students of geography economics development studies and agricultural management administrators planners and aid agency staff This book attempts to provide a broad interdisciplinary introduction for such people

Water Management, Food Security and Sustainable Agriculture in Developing Economies M. Dinesh Kumar, M. V. K. Sivamohan, Nitin Bassi, 2013 This book addresses strategies for food security and sustainable agriculture in developing economies The book focuses primarily on India a fast developing economy whose natural resource base comprising land and water supporting agricultural production is not only under enormous stress but also complex and not amenable to a uniform strategy It critically reviews issues which continue to dominate the debate on water management for agricultural and food production The book examines the validity of the claim that large water resources projects cause serious social and environmental damages using global and national datasets The authors examine claims that the future of Indian agriculture is in rain fed farming supported by small water harvesting They question whether water abundant eastern India could become the granary of India through a groundwater revolution with the right policy inputs In the process they look at the less researched aspect of the food security challenge which is land scarcity in eastern India The book analyzes the physical economic and social impacts of large scale adoption of micro irrigation systems using a farming system approach for north Gujarat Through an economic valuation of the multiple use benefits from tank systems in western Orissa it shows how value of water from large public irrigation systems could be enhanced The book also looks at the reasons for the limited success in bringing about the much needed institutional reforms in canal irrigation for securing higher productivity and equity using case studies of Gujarat Madhya Pradesh and Maharashtra Finally it addresses how other countries in the developing world particularly Sub Saharan Africa could learn from Indian experience
