## Tao Of Objects:

*The Tao of Objects* Gary Entsminger, 1990      **Object Technologies for Advanced Software** Shojiro Nishio, 1993-10-07

This volume constitutes the proceedings of the First International Symposium organized by the Japan Society for Software Science and Technology. The symposium was held in Kanazawa, Japan, November 4-6, 1993, and attracted many researchers from academia and industry as well as ambitious practitioners. Object technologies, in particular object-oriented programming, object-oriented databases, and software object bases, currently attract much attention and hold a great promise of future research and development in diverse areas of advanced software. The volume contains, besides 6 invited presentations by renowned researchers and 25 contributed papers carefully selected by an international program committee from a total of 92 submissions.

**Pattern-Oriented Software Architecture, Patterns for Concurrent and Networked Objects** Douglas C. Schmidt, Michael Stal, Hans Rohnert, Frank Buschmann, 2013-04-22. Designing application and middleware software to run in concurrent and networked environments is a significant challenge to software developers. The patterns catalogued in this second volume of Pattern-Oriented Software Architectures (POSA) form the basis of a pattern language that addresses issues associated with concurrency and networking. The book presents 17 interrelated patterns ranging from idioms through architectural designs. They cover core elements of building concurrent and network systems, service access, and configuration event handling, synchronization, and concurrency. All patterns present extensive examples and known uses in multiple programming languages, including C, C++, and Java. The book can be used to tackle specific software development problems or read from cover to cover to provide a fundamental understanding of the best practices for constructing concurrent and networked applications and middleware. About the Authors: This book has been written by the award-winning team responsible for the first POSA volume, *A System of Patterns*, joined in this volume by Douglas C. Schmidt from the University of California, Irvine (UCI), USA. Visit our Web Page: [Multimedia Software Engineering](#). Shi-Kuo Chang, 2012-12-06. Multimedia has two fundamental characteristics that can be expressed by the following formula: Multimedia = Multiple Media + Hypermedia. How can software engineering take advantage of these two characteristics? Will these two characteristics pose problems in multimedia systems design? These are some of the issues to be explored in this book. The first two chapters will be of interest to managers, software engineers, programmers, and people interested in gaining an overall understanding of multimedia software engineering. The next six chapters present multimedia software engineering according to the conceptual framework introduced in Chapter One. This is of particular use to practitioners, system developers, multimedia application designers, programmers, and people interested in prototyping multimedia applications. The next three chapters are more research-oriented and are mainly intended for researchers working on the specification, modeling, and analysis of distributed multimedia systems, but will also be relevant to scientists, researchers, and software engineers interested in the systems and theoretical aspects of multimedia software engineering. Multimedia Software

Engineering can be used as a textbook in a graduate course on multimedia software engineering or in an undergraduate course on software design where the emphasis is on multimedia applications. It is especially suitable for a project oriented course.

The Case for Repatriating China's Cultural Objects Zuozhen Liu, 2016-02-25 This book investigates China's demands for the repatriation of Chinese cultural relics lost during the country's modern history. It addresses two main research questions: Can the original owners or their rightful successors of cultural objects looted, stolen or illicitly exported before the adoption of the 1954 Hague Convention and the 1970 UNESCO Convention reclaim their cultural objects pursuant to remedies provided by international or national law? And what are the philosophical, ethical and cultural considerations of identity underlying the international conventions protecting cultural objects and claims made for repatriating them? The first part of the book explores current positive legal regimes while the second part focuses on the philosophical, ethical and cultural considerations regarding repatriation of cultural objects. Consisting of seven chapters and an introduction, it outlines the loss of Chinese cultural relics in modern history and the normative framework for the protection of cultural heritage. It presents case studies designed to assess the possibility of seeking legal remedies for restitution under contemporary legal regimes and examines the cultural and ethical issues underpinning the international conventions protecting cultural heritage and claims for the repatriation of cultural heritage. It also discusses issues of cultural identity, the right to cultural identity and heritage, multiculturalism, the politics of recognition, cosmopolitanism, the right to cultural heritage and other related issues. The concluding chapter answers the two research questions and offers suggestions for future research.

*The Ultimate Lost and Philosophy* Sharon Kaye, 2010-10-26 Health Economics and Financing What are the metaphysics of time travel? How can Hurley exist in two places at the same time? What does it mean for something to be possibly true in the flash sideways universe? Does Jack have a moral obligation to his father? What is the Tao of John Locke? Dude, so there's like this island. And a bunch of us were on Oceanic flight 815 and we crashed on it. I kinda thought it was my fault because of those numbers. I thought they were bad luck. We've seen the craziest things here like a polar bear and a Smoke Monster and we traveled through time back to the 1970s. And we met the Dharma dudes. Arzt even blew himself up. For a long time I thought I was crazy. But now I think it might have been destiny. The island's made me question a lot of things. Like why is it that Locke and Desmond have the same names as real philosophers? Why do so many of us have trouble with our dads? Did Jack have a choice in becoming our leader? And what's up with Vincent? I mean he's gotta be more than just a dog, right? I dunno. We've all felt pretty lost. I just hope we can trust Jacob otherwise whoa. With its sixth season series finale, *Lost* did more than end its run as one of the most talked about TV programs of all time; it left in its wake a complex labyrinth of philosophical questions and issues to be explored. Revenge, redemption, love, loss, identity, morality: all of *Lost*'s key themes are examined in this fully updated guide which reveals the deeper meaning behind every twist and turn in this historic one-of-a-kind show.

Evaluation and Comparison of CORBA (Object Request Broker) Implementations Roland Gelbmann, 2002-07-11

Inhaltsangabe Abstract Common Object Request Broker Architecture CORBA a standard from the Object Management Group OMG defines a vendor independent architecture and infrastructure for distributed systems Further CORBA species a client server platform as well as an object oriented programming model for distributed computing The Object Request Broker ORB implements the part of CORBA which manages communication and data exchange between objects CORBA based applications often have to communicate with ORBs from different vendors Therefore testing the interoperability is one important point in this work Six actually available ORB implementations are shown and compared at given features If a problem has to be solved with CORBA it is necessary to choose the best ORB implementation for that purpose because they differ often at significant points Important details for decision are Standard Conformity Robustness Functionality as well as Functional Range or Interoperability Exactly these properties are to be examined in this work The investigation is performed on six at the web available ORBs indeed Jacorb 1 4 beta 2 Orbacus 4 1 0 Orbix E2A 2 0 OpenORB 1 2 0 J2SE ORB 1 4 0 as well as TAO 1 2 1 all in their most actual released version Additionally to these properties the correct implementation of the most important CORBA Services is checked They are Event Service Notification Service Name Service and Transaction Service The ORBs are compared at this given properties It shows that the ORBs differ very much from each other and that the CORBA Services are often implemented incorrectly Further a high costly implementation is no guarantee for best quality at all points The evaluation shows that a freely available ORB can be as good as or better than a commercial one

**Transactions on Large-Scale Data- and Knowledge-Centered Systems VI** Abdelkader Hameurlain, Josef Küng, Roland Wagner, Stephen W. Liddle, Klaus-Dieter Schewe, Xiaofang Zhou, 2012-09-22 The LNCS journal Transactions on Large Scale Data and Knowledge Centered Systems focuses on data management knowledge discovery and knowledge processing which are core and hot topics in computer science Since the 1990s the Internet has become the main driving force behind application development in all domains An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data and knowledge management systems from centralized systems to decentralized systems enabling large scale distributed applications providing high scalability Current decentralized systems still focus on data and knowledge as their main resource Feasibility of these systems relies basically on P2P peer to peer techniques and the support of agent systems with scaling and decentralized control Synergy between grids P2P systems and agent technologies is the key to data and knowledge centered systems in large scale environments This the sixth issue of Transactions on Large Scale Data and Knowledge Centered Systems contains eight extended and revised versions of papers selected from those presented at DEXA 2011 Topics covered include skyline queries probabilistic logics and reasoning theory of conceptual modeling prediction in networks of moving objects validation of XML integrity constraints management of loosely structured multi dimensional data data discovery in the presence of annotations and quality ranking for Web articles

**Mixed Motives** Marc Levine, 2025-04-01 This book combines foundational constructions in the theory of motives and results relating motivic cohomology to more explicit constructions Prerequisite for understanding the work is a basic background in algebraic geometry The author constructs and describes a triangulated category of mixed motives over an arbitrary base scheme Most of the classical constructions of cohomology are described in the motivic setting including Chern classes from higher K theory push forward for proper maps Riemann Roch duality as well as an associated motivic homology Borel Moore homology and cohomology with compact supports

**Spatial Data Management** Nikos Mamoulis, 2012 Spatial database management deals with the storage indexing and querying of data with spatial features such as location and geometric extent Many applications require the efficient management of spatial data including Geographic Information Systems Computer Aided Design and Location Based Services The goal of this book is to provide the reader with an overview of spatial data management technology with an emphasis on indexing and search techniques It first introduces spatial data models and

queries and discusses the main issues of extending a database system to support spatial data. It presents indexing approaches for spatial data with a focus on the R tree. Query evaluation and optimization techniques for the most popular spatial query types (selections, nearest neighbor search and spatial joins) are portrayed for data in Euclidean spaces and spatial networks. The book concludes by demonstrating the ample application of spatial data management technology on a wide range of related application domains: management of spatio-temporal data and high dimensional feature vectors, multi-criteria ranking, data mining and OLAP, privacy preserving data publishing and spatial keyword search.

Internet-based Intelligent Information Processing Systems Robert J. Howlett, 2003. The Internet WWW has made it possible to easily access quantities of information never available before. However, both the amount of information and the variation in quality pose obstacles to the efficient use of the medium. Artificial intelligence techniques can be useful tools in this context. Intelligent systems can be applied to searching the Internet and data mining, interpreting Internet-derived material, the human Web interface, remote condition monitoring and many other areas. This volume presents the latest research on the interaction between intelligent systems, neural networks, adaptive and connectionist paradigms, fuzzy and rule-based systems, intelligent agents and the Internet WWW. It surveys both the employment of intelligent systems to facilitate and enhance the use of the Internet and applications where the Internet is a channel through which intelligent techniques are applied.

Contents: Search and Resource Discovery Techniques, Adaptive Content Mapping for Internet Navigation, Flexible Queries to XML, Information Agent Based Hypermedia Models, Self-Organizing Neural Networks, Application for Information Organization, Emotion-Oriented Intelligent Systems, Public Opinion Channel, A New Era of Intelligent E-Commerce, Automated Internet Trading Based on Optimized Physics Models of Markets.

Readership: Engineers, researchers, students and technical managers interested in Internet-based intelligent systems.
