**Logical Dynamics of Information and Interaction** Johan van Benthem, 2011-09-29 This book develops a view of logic as a theory of information driven agency and intelligent interaction between many agents with conversation argumentation and games as guiding examples It provides one uniform account of dynamic logics for acts of inference observation questions and communication that can handle both update of knowledge and revision of beliefs It then extends the dynamic style of analysis to include changing preferences and goals temporal processes group action and strategic interaction in games Throughout the book develops a mathematical theory unifying all these systems and positioning them at the interface of logic philosophy computer science and game theory A series of further chapters explores repercussions of the dynamic stance for these areas as well as cognitive science      *Computational Logic in Multi-Agent Systems* Joao Leite, Paolo Torroni, Thomas Agotnes, Guido Boella, Leon van der Torre, 2011-07-06 This book constitutes the proceedings of the 12th International Workshop on Computational Logic in Multi Agent Systems CLIMA XII held in Barcelona Spain in July 2011 The 22 papers presented were carefully reviewed and selected from 43 submissions The purpose of the CLIMA workshops is to provide a forum for discussing techniques based on computational logic for representing programming and reasoning about agents and multi agent systems in a formal way This volume features five thematic special sessions secrets and trust knowledge and beliefs logics for games and social choice cooperation logic and languages and norms and normative multi agent systems

Symbolic and Quantitative Approaches to Reasoning with Uncertainty Thomas D. Nielsen, Nevin L. Zhang, 2004-04-07 The refereed proceedings of the 7th European Conference on Symbolic and Quantitative Approaches to Reasoning with Uncertainty ECSQARU 2003 held in Aalborg Denmark in July 2003 The 47 revised full papers presented together with 2

invited survey articles were carefully reviewed and selected for inclusion in the book. The papers are organized in topical sections on foundations of uncertainty concepts, Bayesian networks, algorithms for uncertainty inference, learning, decision graphs, belief functions, fuzzy sets, possibility theory, default reasoning, belief revision, and inconsistency handling, logics and tools.

**STACS 2006** Bruno Durand, Wolfgang Thomas, 2006-03-01 This book constitutes the refereed proceedings of the 23rd Annual Symposium on Theoretical Aspects of Computer Science held in February 2006. The 54 revised full papers presented together with three invited papers were carefully reviewed and selected from 283 submissions. The papers address the whole range of theoretical computer science including algorithms and data structures, automata and formal languages, complexity theory, semantics and logic in computer science.

**Uncertainty Reasoning for the Semantic Web I** Paulo C. G. Costa, Claudia d'Amato, Nicola Fanizzi, Kathryn B. Laskey, Kenneth J. Laskey, Matthias Nickles, Michael Pool, 2008-12-02 This book constitutes the thoroughly refereed first three workshops on Uncertainty Reasoning for the Semantic Web (URSW) held at the International Semantic Web Conferences (ISWC) in 2005, 2006, and 2007. The 22 papers presented are revised and strongly extended versions of selected workshops papers as well as invited contributions from leading experts in the field and closely related areas. The present volume represents the first comprehensive compilation of state of the art research approaches to uncertainty reasoning in the context of the semantic Web, capturing different models of uncertainty and approaches to deductive as well as inductive reasoning with uncertain formal knowledge.

**Knowledge Contributors** Vincent F. Hendricks, Klaus Frovin Jørgensen, Stig Andur Pedersen, 2013-11-27 The aim of this thematically unified anthology is to track the history of epistemic logic, to consider some important applications of these logics of knowledge and belief in a variety of fields, and finally to discuss future directions of research with particular emphasis on active agenthood and multi-modal systems. It is accessible to researchers and graduate students in philosophy, computer science, game theory, economics, and related disciplines, utilizing the means and methods of epistemic logic.

**Logic and Its Applications** Mohua Banerjee, Anil Seth, 2010-12-14 Edited in collaboration with FoLLI (the Association of Logic, Language and Information), this book constitutes the refereed proceedings of the 4th Indian Conference on Logic and Its Applications (ICLA 2011) held in Delhi, India, in January 2011. The 14 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 34 submissions. The papers present current research in all aspects of formal logic, ranging from pure and applied logic to history of logic.

**Fundamentals of Secure System Modelling** Raimundas Matulevičius, 2017-08-17 This book provides a coherent overview of the most important modelling-related security techniques available today and demonstrates how to combine them. Further, it describes an integrated set of systematic practices that can be used to achieve increased security for software from the outset and combines practical ways of working with practical ways of distilling, managing, and making security knowledge operational. The book addresses three main topics: 1. security requirements engineering, including security risk management, major activities, asset identification, security risk analysis, and defining security requirements; 2. secure

software system modelling including modelling of context and protected assets security risks and decisions regarding security risk treatment using various modelling languages and 3 secure system development including effective approaches pattern driven development and model driven security The primary target audience of this book is graduate students studying cyber security software engineering and system security engineering The book will also benefit practitioners interested in learning about the need to consider the decisions behind secure software systems Overall it offers the ideal basis for educating future generations of security experts

**Inquisitive Semantics** Ivano Ciardelli, Jeroen Groenendijk, Floris Roelofsen, 2018-12-27 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations This book presents a new logical framework to capture the meaning of sentences in conversation The traditional approach equates meaning with truth conditions to know the meaning of a sentence is to know under which circumstances it is true The reason for this is that linguistic and philosophical investigations are usually carried out in a logical framework that was originally designed to characterize valid argumentation However argumentation is neither the sole nor the primary function of language One task that language more widely and ordinarily fulfils is to enable the exchange of information between conversational participants In the framework outlined in this volume inquisitive semantics information exchange is seen as a process of raising and resolving issues Inquisitive semantics provides a new formal notion of meaning which makes it possible to model various concepts that are crucial for the analysis of linguistic information exchange in a more refined and more principled way than has been possible in previous frameworks Importantly it also allows an integrated treatment of statements and questions The first part of the book presents the framework in detail while the second demonstrates its benefits in the semantic analysis of questions coordination modals conditionals and intonation The book will be of interest to researchers and students from advanced undergraduate level upwards in the fields of semantics pragmatics philosophy of language and logic

**Logic, Rationality, and Interaction** Alexandru Baltag, Jeremy Seligman, Tomoyuki Yamada, 2017-09-01 This LNCS volume is part of FoLLI book series and contains the papers presented at the 6th International Workshop on Logic Rationality and Interaction LORI VI held in September 2017 in Sapporo Japan The focus of the workshop is on following topics Agency Argumentation and Agreement Belief Revision and Belief Merging Belief Representation Cooperation Decision making and Planning Natural Language Philosophy and Philosophical Logic and Strategic Reasoning

**Jaakko Hintikka on Knowledge and Game-Theoretical Semantics** Hans van Ditmarsch, Gabriel Sandu, 2018-01-31 This book focuses on the game theoretical semantics and epistemic logic of Jaakko Hintikka Hintikka was a prodigious and esteemed philosopher and logician and his death in August 2015 was a huge loss to the philosophical community This book whose chapters have been in preparation for

several years is dedicated to the work of Jaako Hintikka and to his memory This edited volume consists of 23 contributions from leading logicians and philosophers who discuss themes that span across the entire range of Hintikka's career Semantic Representationalism Logical Dialogues Knowledge and Epistemic logic are among some of the topics covered in this book's chapters The book should appeal to students scholars and teachers who wish to explore the philosophy of Jaako Hintikka

**Formal Methods and Software Engineering** Jim Davies, Wolfram Schulte, Mike Barnett, 2004-10-28 Formal engineering methods are changing the way that software systems are developed With language and tool support they are being used for automatic code generation and for the automatic abstraction and checking of implementations In the future they will be used at every stage of development requirements specification design implementation testing and documentation The ICFEM series of conferences aims to bring together those interested in the application of formal engineering methods to computer systems Researchers and practitioners from industry academia and government are encouraged to attend and to help advance the state of the art Authors are strongly encouraged to make their ideas as accessible as possible and there is a clear emphasis upon work that promises to bring practical tangible benefit reports of case studies should have a conceptual message theory papers should have a clear link to application and papers describing tools should have an account of results ICFEM 2004 was the sixth conference in the series and the first to be held in North America Previous conferences were held in Singapore China UK Australia and Japan The Programme Committee received 110 papers and selected 30 for presentation The final versions of those papers are included here together with 2 page abstracts for the 5 accepted tutorials and shorter abstracts for the 4 invited talks

*Johan van Benthem on Logic and Information Dynamics* Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we

think of logic philosophy and computation Thus very much in line with van Benthem s work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations      *Proceedings of the Merchant Marine Council* United States.
