Taste Of Poison:

A Taste for Poison Neil Bradbury, Ph.D.,2022-02-01 A fascinating tale of poisons and poisonous deeds which both educates and entertains Kathy Reichs A brilliant blend of science and crime A TASTE FOR POISON reveals how eleven notorious poisons affect the body through the murders in which they were used As any reader of murder mysteries can tell you poison is one of the most enduring and popular weapons of choice for a scheming murderer It can be slipped into a drink smeared onto the tip of an arrow or the handle of a door even filtered through the air we breathe But how exactly do these poisons work to break our bodies down and what can we learn from the damage they inflict In a fascinating blend of popular science medical history and true crime Dr Neil Bradbury explores this most morbidly captivating method of murder from a cellular level Alongside real life accounts of murderers and their crimes some notorious some forgotten some still unsolved are the equally compelling stories of the poisons involved eleven molecules of death that work their way through the human body and paradoxically illuminate the way in which our bodies function Drawn from historical records and current news headlines A Taste for Poison weaves together the tales of spurned lovers shady scientists medical professionals and political assassins to show how the precise systems of the body can be impaired to lethal effect through the use of poison From the deadly origins of the gin tonic cocktail to the arsenic laced wallpaper in Napoleon s bedroom A Taste for Poison leads readers on a riveting tour of the intricate complex systems that keep us alive or don t

Summary of Dr. Neil Bradbury's A Taste for Poison Everest Media,2022-03-23T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 Poisoning is the act of administering a poison to another person It is a very morbid fascination and the methods of poisoning are varied and strange The words poison and toxin are often used interchangeably but they are not the same thing 2 The four routes of poison delivery are ingestion respiration absorption and injection The actions of poisons reveal a lot about human biology Many poisons attack the nervous system disrupting the highly sophisticated electrical signaling that controls the normal functions of the body 3 The same chemicals that are used to treat diseases are also used to tease apart the inner molecular and cellular mechanisms of cells and organs which is then used to develop new drugs that treat and cure a wide range of diseases 4 The chemical in question is insulin and its absence or an inability of the body to respond to it properly leads to the disease diabetes mellitus Before the widespread availability of insulin a diagnosis of diabetes was akin to a death sentence

GROSS (Criminologist),1911 **Taste** Jehanne Dubrow,2022-08-23 Taste is a lyric meditation on one of our five senses which we often take for granted Structured as a series of small bites the book considers the ways that we ingest the world how we come to know ourselves and others through the daily act of tasting Through flavorful explorations of the sweet the sour the salty the bitter and umami Jehanne Dubrow reflects on the nature of taste In a series of short interdisciplinary essays she blends personal experience with analysis of poetry fiction music and the visual arts as well as religious and philosophical texts Dubrow considers the science of taste and how taste transforms from a physical sensation into a metaphor for discernment Taste is organized not so much as a linear dinner served in courses but as a meal consisting of meze small plates of intensely flavored discourse Hedonics of Taste Robert C. Bolles,2014-02-04 A study of hedonism could conceivably operate on a massive scale This book however concentrates specifically on the hedonics of taste The editor notes some important reasons for limiting the argument in this manner First of all this is an area of hedonics in which a handful of experimenters continued to do research during a period when hedonism might have been lost altogether Secondly the past ten years have seen quite a number of researchers turn their attention to taste preferences and so it seems appropriate to celebrate the fact that new findings can be incorporated into a very old conceptual framework the ancient concept of hedonism The contributors approach their subject from many different angles Historical conceptual and methodological chapters are presented developmental aspects psychological substrates and the social considerations of hedonics are discussed This volume offers viewpoints from dataphiles and theorists mechanists and cognitivists unifiers and disrupters a diversity that reflects the vital state of psychology today **Issues in the Ecological Study of Learning** T. D. Johnston,A. T. Conditioned Taste Aversion Steve Reilly,Todd R. Schachtman,2009 Conditioned taste aversion is arguably the most important learning process that humans and animals possess because it prevents the repeated self administration of toxic food It has not only profoundly influenced the content and direction of learning theory but also has important human nutritional and clinical significance In addition to its direct relevance to food selection dietary habits and eating disorders it is significant for certain clinical populations that develop it as a consequence of their treatment The study of conditioned taste aversions has invigorated new theory and research on drug conditioning and addictions as well as on conditioned immunity There has also been a substantial amount of recent research exploring the neural substrates of conditioned taste aversion its neuroanatomy pharmacology and role in the molecular and cellular basis of plasticity This book provides a definitive perspective on the current state of research theory and clinical applications for conditioned taste aversion effects and methodology In each chapter a leading scholar in the field presents a broad range of studies along with current findings on the topic highlighting both the major theoretical landmarks and the significant new perspectives It will be an important

resource for both professional and student researchers who study conditioning learning plasticity eating disorders and dietary and ingestive behaviors in neuroscience cognitive neuroscience cognitive psychology developmental psychology clinical psychology psychopharmacology and medicine **The Principles of Judicial Proof** John Henry Wigmore,1913
