Talks With Social Scientists:

Talks with Social Scientists Charles F. Madden, 1968 **Soviet Social Scientists Talking** Mary Buckley, 1986-09-05

Harvey Sacks : Social Science and Conversation Analysis London David Silverman Professor of Sociology Goldsmiths College, 1998-09-30 Harvey Sacks's early death in 1975 robbed the social sciences of one of its most original thinkers. Although he published relatively little in his lifetime his lectures and papers were enormously influential in sociology and sociolinguistics and they played a major role in the development of ethnomethodology and conversation analysis. The recent publication of Sacks's *Lectures on Conversation* has provided an excellent opportunity for a wide ranging reassessment of his contribution. In this new book David Silverman provides a clear introduction to Sacks's work and reassesses its value for sociology linguistics anthropology and psychology. Using a variety of examples he explains Sacks's ideas on method language and talk interaction. He argues that Sacks's work offers a highly original perspective on language and social life and raises fundamental questions for the social sciences questions which after more than twenty years remain vitally important and largely unanswered. Written in a lively and accessible way this book will be of particular interest to students of sociology sociolinguistics social theory and method but it will also be of interest to students and researchers in anthropology psychology and related disciplines.

Analyzing Talk in the Social Sciences Katherine Bischooping, Amber Gazso, 2015-11-10
Talk is one of the main resources available to qualitative researchers. It offers rich meaningful data that can provide real insights and new perspectives. But once you have the data how do you select an appropriate means of analysis? How do you ensure that the approach you adopt is the best for your project and your data? The book will help you choose strategies for qualitative analysis that best suit your research. It walks you through key decisions provides actionable game plans and highlights the advantages and challenges of the main approaches. It is packed full of real examples designed to showcase the different tools you might use to meet your own objectives. Each section of the book focuses on one popular strategy for analyzing talk based data: Narrative Analysis Conversation Analysis Discourse Analysis. Taken together these sections will help you to fine tune the link between your primary research question and your methods to ensure that your theoretical stance fits with your methods and to reason through your analysis in a way that will be recognizable to the intellectual communities of narrative conversation or discourse analysts. This book is both starting point and map for any social scientist looking to strategically and purposefully analyse talk data.

Philosophy of Social Science Ted Benton, Ian Craib, 2023-02-09
Philosophers and social scientists share a common goal to explore fundamental truths about ourselves and the nature of the world in which we live. But in what ways do these two distinct disciplines inform each other and arrive at these truths? This third revised edition of this highly regarded text directly responds to such issues as it introduces students to the philosophy of social science. This classic text has been brought up to date with a new introduction and commentaries reflecting on the original chapters in the context of more recent developments. Two brand new chapters discuss critical social science and one

of the most pressing issues concerning social scientists today how we interrogate human society's complex relationship with nature and its impact on biodiversity and climate change The book Clearly introduces the theoretical underpinnings of social science assuming no prior knowledge Addresses critical issues relating to the nature of social science Interrogates the relationship between social science and natural science Encompasses traditional and contemporary perspectives Introduces and critiques a wide range of approaches from empiricism and positivism to post structuralism and rationalism Written in an engaging and student friendly style the book introduces key ideas and concepts while raising questions and opening debates A cornerstone text in the Traditions in Social Theory series this book remains essential reading for all students of social theory and social science research

How Social Science Got Better Matt Grossmann, 2021 In *How Social Science Got Better* Matt Grossmann provides a robust defense of the current state of the social sciences He focuses in particular on the salutary innovations in research methods and the broadening of subject matter that academics deem worthy of inquiry He offers a wide ranging account of current research trends that will necessarily force the academy's many critics to rethink their lazy critiques and instead acknowledge the path breaking advances in knowledge occurring in the social sciences today

Social Science Perspectives on Medical Ethics G. Weisz, 1989-12-31 Medical or bio ethics has in recent years been a growth industry Journals Centers and Associations devoted to the subject proliferate Medical schools seem increasingly to be filling rare positions in the humanities and social sciences with ethicists Hardly a day passes without some media scrutiny of one or another ethical dilemma resulting from our new found ability to transform the natural conditions of life Although bioethics is a self consciously interdisciplinary field it has not attracted the collaboration of many social scientists In fact social scientists who specialize in the study of medicine have in many cases watched its development with a certain ambivalence No one disputes the significance and often the painfulness of the issues and choices being addressed But there is something about the way these issues are usually handled which seems somehow inappropriate if not wrong headed to one trained in a discipline like sociology or history In their analyses of complex situations ethicists often appear grandly oblivious to the social and cultural context in which these occur and indeed to empirical referents of any sort Nor do they seem very conscious of the cultural specificity of many of the values and procedures they utilize when making ethical judgments The unease felt by many in the social sciences was given articulate expression in a paper by Renee Fox and Judith Swazey which appeared in 1984

Columbia Studies in the Social Sciences ,1910 **Social Science** ,1927 **Turning Psychology into a Social Science** Bernard Guerin,2020-07-19 This radical book explores a new understanding of psychology based on human engagement with external contexts rather than what goes on inside our heads It is part of a trilogy that offers a new way of doing psychology focusing on people s social and societal environments as determining their behaviour rather than internal and individualistic attributions By showing that we engage directly with our complex social political economic patriarchal colonized and cultural contexts and that what we do and think arises from this direct engagement with these external contexts Bernard Guerin expertly demonstrates that Western ideas have systematically excluded the social but that this is really where the major determinants of our behaviour arise This book works through many human activities that psychology still treats as individualized and internal and shows their social and societal origins These includes beliefs the sense of self the arts religious behaviours and the new and growing area of conservation psychology The social structures found by sociology anthropology and sociolinguistics are shown to shape most individual human actions and it is shown how the main points of Marxism and Indigenous knowledges can be better merged into this new and broader social science Replacing the internal attributions of causes with external contextual analyses based in the social sciences this book is fascinating reading for academics and students in psychology and the social sciences and provides exciting new ways to conceptualize and observe human actions in new ways and to resist the current individualistic thinking of psychology
