Targeting Of Drugs Strategies For Gene C:

Targeted Drug Strategies for Cancer and Inflammation Ann L. Jackman, Christopher P. Leamon, 2011-05-05 Folate pathways are essential in metabolism and macromolecule synthesis Antifolate drugs that are largely transported via a high capacity folate transporter i e the reduced folate carrier and inhibit folate dependent enzymes include the dihydrofolate reductase inhibitor methotrexate and the thymidylate synthase inhibitors raltitrexed and pemetrexed Major advances in folate research made within the last decade include i the approval of pemetrexed for the treatment of lung cancer and mesothelioma and ii the demonstration that cell membrane anchored folate receptors FR are exploitable for cancer and inflammatory disease management FRs are not widely distributed in normal tissues except on some luminal surfaces however they are accessible to systemically administered agents when expressed on many cancers as well as on activated macrophages involved in various inflammatory diseases High affinity folate radioisotope conjugates have been developed for imaging pathogenic FR positive diseases including cancer Since the FR transports folates via a low capacity but high affinity endocytic pathway a variety of FR targeted antifolate drugs and folate conjugates bearing a wide range of payloads including cytotoxic drugs are currently being developed which exploit this property The FR is also being utilized in immunotherapy approaches for the treatment of overexpressing cancers

Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis Padma V. Devarajan, Prajakta Dandekar, Anisha A. D'Souza, 2019-11-09 This book elaborates on drug delivery targeting via intracellular delivery specifically through the Receptor Mediated Endocytosis RME approach due to the involvement of cellular receptors in various grave diseases Targeted delivery relies on two basic approaches passive and active targeting While passive targeting approaches have shown great promise the improved selectivity achieved with active targeting approaches has resulted in significantly higher efficacy Interestingly there are numerous strategies for active targeting many of which are already highlighted in Targeted Drug Delivery Concepts and Applications Nevertheless an exciting and practical strategy for active targeting which could enable high intracellular delivery is through exploitation of RME Cells in the body express receptors to enable various physiological and biochemical processes As a result many of these receptors are overexpressed in pathological conditions or newer receptors expressed due to defective cellular functioning RME is based on exploitation of such receptors to achieve intracellular delivery While targeted delivery can have manifold applications in this book we focus on two major and challenging therapeutic areas i Cancer and ii Infectious Diseases Targeted Intracellular Drug Delivery by Receptor Medicated Endocytosis discusses the major receptors that are useful for targeted delivery for these afflictions A major section of this book is dedicated to details regarding their occurrence and location the recognition domain of the receptor structure activity relationship of substrate ligand for selective binding ligands explored antagonists for ligand binding and relevance of these aspects for therapy of cancer and infectious diseases These facets are elucidated with the help of specific examples from academic research and also emphasize commercial products wherever relevant In vitro cellular models relied on for assessing receptor mediated cellular targeting and in vivo models depicting clinical efficacy are focused on in a separate section Finally we briefly discuss the regulatory and toxicity issues that may be associated specifically with the RME approach of intracellular drug delivery

Combinational Immunotherapy of Cancer: Novel Targets, Mechanisms, and Strategies Xuyao Zhang, Xian Zeng, Yubin Li, Dianwen Ju, 2024-01-15 Cancer immunotherapy including immune checkpoint inhibitors ICIs and chimeric antigen receptor T cell CAR T therapy has revolutionized the paradigm in cancer treatment However the clinical outcome of immunotherapy varies considerably among patients and only a minority of patients achieve long term clinical benefits This is largely attributed to the fact that existing cancer immunotherapies which concentrate on several classical targets CTLA 4 PD 1 PD L1 etc and limited types of immune cell populations T cells are insufficient to cope with the complexity of highly heterogeneous tumor microenvironment TME This calls for more efforts to not only expand our toolbox for manipulating anticancer immunity but also diversify our combinational strategies To this end it is urgent to deeper our understanding of cancer immunotherapy by using both experimental and computational methodologies from multi scale perspectives 1 novel targets from either tumor cells or non tumor cells within TME e g tumor intrinsic resistance drivers new immune checkpoints

neoantigens 2 in depth characterization of more immune cell populations e g macrophages Tregs B cells and their interactions and dynamics within TME 3 landscape of actionable targets in patient populations for combination design These efforts will open the avenue of rational design of combinational immunotherapies allowing researchers and clinicians to design novel targeting therapeutics or to optimally orchestrate combinatory strategies aiming to surmount resistance mechanisms and improve clinical outcomes
