The Development of Thinking and Reasoning Pierre Barrouillet, Caroline Gauffroy, 2013-06-26 Thinking and reasoning are key activities for human beings In this book a distinguished set of contributors provides a wide readership with up to date scientific advances in the developmental psychology of thinking and reasoning both at the theoretical and empirical levels The first part of the book illustrates how modern approaches to the study of thinking and reasoning have gone beyond the Piagetian legacy through the investigation of avenues previously not explored and by demonstrating that young children have higher capacities than was assumed within the Piagetian tradition The second part focuses upon theoretical and empirical investigations of the interplay between logic and intuition in reasoning and decision making and how these forms of thinking evolve with age through the general framework of what is known as dual process theories Contrary to Piaget's claim it becomes apparent that elaborate adult reasoning could rely on some form of intuition The Development of Thinking and Reasoning provides psychologists educators and everyone interested in child development with an integrated and up to date series of chapters written by prominent specialists in the areas of thinking reasoning and decision making

In Two Minds Jonathan St. B. T. Evans, Keith

Frankish,2009 This book explores the idea that we have two minds one that is automatic unconscious and fast the other controlled conscious and slow In recent years there has been great interest in so called dual process theories of reasoning and rationality According to dual processes theories there are two distinct systems underlying human reasoning an evolutionarily old system that is associative automatic unconscious parallel and fast and a more recent distinctively human system that is rule based controlled conscious serial and slow Within the former processes are held to be innate and to use heuristics which evolved to solve specific adaptive problems In the latter processes are taken to be learned flexible and responsive to rational norms Despite the attention these theories are attracting there is still poor communication between dual process theorists themselves and the substantial bodies of work on dual processes in cognitive psychology and social psychology remain isolated from each other This book brings together leading researchers on dual processes to summarize the state of the art highlight key issues present different perspectives explore implications and provide a stimulus to further work It includes new ideas about the human mind both by contemporary philosophers interested in broad theoretical questions about mental architecture and by psychologists specialising in traditionally distinct and isolated fields For all those in the cognitive sciences this is a book that will advance dual process theorizing promote interdisciplinary communication and encourage further applications of dual process approaches

Human Thinking S. Ian Robertson, 2020-11-23

Human Thinking The Basics provides an essential introduction into how we develop thoughts the types of reasoning we engage in and how our thinking can be tailored by subconscious processing Beginning with the fundamentals the book examines the mental processes that shape our thoughts the trajectory of how thought evolved within the animal kingdom and the stages of development of thinking throughout childhood Robertson insightfully explains the effectiveness of political slogans and advertisements in engaging shallow information processing and the effortful analytical processing required in critical thinking Delving into fascinating topics such as magical thinking in the form of religion and superstition fake news and motivated ignorance the book explains the discrepancy between reality and our internal mental representations the influence of semantics on deductive reasoning and the error prone yet adaptive nature of biases Containing student friendly features including end of chapter summaries demonstrative puzzles simple figures and further reading lists this book will be essential reading for all students of thinking and reasoning

The Epistemological Spectrum David K. Henderson, Terence Horgan, 2011-08-04

David Henderson and Terence Horgan set out a broad new approach to epistemology which they see as a mixed discipline having both a priori and empirical elements They defend the roles of a priori reflection and conceptual analysis in philosophy but their revisionary account of these philosophical methods allows them a subtle but essential empirical dimension They espouse a dual perspective position which they call iceberg epistemology respecting the important differences between epistemic processes that are consciously accessible and those that are not Reflecting on epistemic justification they introduce the notion of transglobal reliability as the mark of the cognitive processes that are suitable for humans Which cognitive processes these are depends on contingent facts about human cognitive capacities and these cannot be known a priori

Cognitive Sophistication and the Development of Judgment and Decision-Making Maggie E. Toplak, 2021-10-27

Cognitive Sophistication and the Development of Judgment and Decision Making reviews the existing literature on the development of reasoning judgment and decision making with a primary focus on measures from the heuristics and biases tradition The book presents a model based on cognitive sophistication to examine the development of judgment and decision making including age related differences in developmental samples associations with intellectual

abilities and executive functions and associations with dispositional tendencies that support judgment and decision making. Additional sections cover the empirical findings of a longitudinal study conducted over seven years that tie together the discussed aspects related to cognitive sophistication. This book will provide a much needed description of the theoretical and conceptual issues, a review of empirical findings, and an integrative summary of the implications for developmental models of reasoning, judgment, and decision making. Explores whether individual heuristics and biases are associated. Reviews individual differences in cognitive abilities and thinking dispositions. Examines reasoning from the lens of cognitive sophistication. Discusses the implications for models including dual process models. Tests and elaborates using empirical findings from a longitudinal study.

Comparative Decision-Making Analysis Philip H. Crowley, Thomas R. Zentall, 2013-03-21. Decisions are made by individual humans but also by corporations, plants, robots, and computer programs. The authors of this volume help initiate a powerful new comparative dimension for our analysis and application of decision making across an enormous range of intellectual enquiry.

Social Work, 1990

Experimental Philosophy, Rationalism, and Naturalism Eugen Fischer, John Collins, 2015-04-24. Experimental philosophy is one of the most exciting and controversial philosophical movements today. This book explores how it is reshaping thought about philosophical method. Experimental philosophy imports experimental methods and findings from psychology into philosophy. These fresh resources can be used to develop and defend both armchair methods and naturalist approaches on an empirical basis. This outstanding collection brings together leading proponents of this new meta-philosophical naturalism from within and beyond experimental philosophy. They explore how the empirical study of philosophically relevant intuition and cognition transforms traditional philosophical approaches and facilitates fresh ones. Part One examines important uses of traditional armchair methods which are not threatened by experimental work and develops empirically informed accounts of such methods that can potentially stand up to experimental scrutiny. Part Two analyses different uses and rationales of experimental methods in several areas of philosophy and addresses the key methodological challenges to experimental philosophy. Do its experiments target the intuitions that matter in philosophy? And how can they support conclusions about the rights and wrongs of philosophical views? Essential reading for students of experimental philosophy and metaphilosophy. *Experimental Philosophy, Rationalism, and Naturalism* will also interest students and researchers in related areas such as epistemology and the philosophies of language, perception, mind, and action science and psychology.

Logic and Uncertainty in the Human Mind Shira Elqayam, Igor Douven, Jonathan St B. T. Evans, Nicole Cruz, 2020-06-10 David E Over is a leading cognitive scientist and with his firm grounding in philosophical logic he also exerts a powerful influence on the psychology of reasoning He is responsible for not only a large body of empirical work and accompanying theory but for advancing a major shift in thinking about reasoning commonly known as the new paradigm in the psychology of human reasoning Over s signature mix of philosophical logic and experimental psychology has inspired generations of researchers psychologists and philosophers alike over more than a quarter of a century The chapters in this volume written by a leading group of contributors including a number who helped shape the psychology of reasoning as we know it today each take their starting point from the key themes of Over s ground breaking work The essays in this collection explore a wide range of central topics such as rationality bias dual processes and dual systems as well as contemporary psychological and philosophical theories of conditionals It concludes with an engaging new chapter authored by David E Over himself which details and analyses the new paradigm psychology of reasoning This book is therefore important reading for scholars researchers and advanced students in psychology philosophy and the cognitive sciences including those who are not familiar with Over s thought already

Behavioral Law and Economics Eyal Zamir, Doron Teichman, 2018-06-05 In the past few decades economic analysis of law has been challenged by a growing body of experimental and empirical studies that attest to prevalent and systematic deviations from the assumptions of economic rationality While the findings on bounded rationality and heuristics and biases were initially perceived as antithetical to standard economic and legal economic analysis over time they have been largely integrated into mainstream economic analysis including economic analysis of law Moreover the impact of behavioral insights has long since transcended purely economic analysis of law in recent years the behavioral movement has become one of the most influential developments in legal scholarship in general Behavioral Law and Economics offers a state of the art overview of the field Eyal Zamir and Doron Teichman survey the entire body of psychological research that lies at the basis of behavioral analysis of law and critically evaluate the core methodological questions of this area of research Following this the book discusses the fundamental normative questions stemming from the

psychological findings on bounded rationality and explores their implications for setting the law's goals and designing the means to attain them. The book then provides a systematic and critical examination of the contributions of behavioral studies to all major fields of law including property, contracts, consumer protection, torts, corporate securities, regulation, antitrust, administrative, constitutional, international, criminal, and evidence law, as well as to the behavior of key players in the legal arena: litigants and judicial decision makers.
