Adapting Human Thinking and Moral Reasoning in Contemporary Society Yama, Hiroshi, Salvano-Pardieu, Veronique, 2019-11-22 Studies on human thinking have focused on how humans solve a problem and have discussed how human thinking can be rational. A juxtaposition between psychology and sociology allows for a unique perspective of the influence on human thought and morality on society. *Adapting Human Thinking and Moral Reasoning in Contemporary Society* is an in-depth critical resource that provides comprehensive research on thinking and morality and its influence on societal norms as well as how people adapt themselves to the novel circumstances and phenomena that characterize the contemporary world, including low birthrate, the reduction of violence, and globalization. Furthermore, cultural differences are considered with research targeted towards problems specific to a culture. Featuring a wide range of topics such as logic, education, cognition, and knowledge management systems, this book is ideal for academicians, sociologists, researchers, social scientists, psychologists, and students.

Beyond Nature and Nurture Javier Pérez-Jara, Íñigo Ongay, 2025-05-28 This book gathers several of the world's leading scholars in the nature vs nurture debate, offering a timely reconsideration of the dynamic interactions between physical, chemical, biological, social, and cultural factors that shape human multidimensionality. Emphasizing this multidimensionality, this edited volume seeks to bridge the divide between biology and social theory, two research communities that have too often overlooked each other. These disciplines, despite being central to understanding human nature, have long operated in isolation. While some animal species exhibit higher degrees of phenotypic plasticity in specific traits, humans stand out as the most plastic species in both their neurological and sociocultural systems. This plasticity leads the contributors of this book to move beyond both biological reductionism and the blank slate hypothesis. While biology undoubtedly plays a role in shaping and stabilizing human social and cultural processes, it does so only within the framework of an inherently social environment, one shaped by historically contingent and socially constructed realities such as values, codes, and cultural perceptions. More importantly, cultural structures and social interactions actively shape and transform certain biological features that were once considered

immutable This book lays the groundwork for a productive dialogue among biologists psychologists social theorists and philosophers It also highlights some of the moral and political consequences of different perspectives within the nature vs nurture debate Through updated scientific and philosophical theorizing the chapters in this book aim to overcome once and for all the simplistic yet persistent opposition between nature and nurture offering a far more complex and dynamic yet richer and epistemologically manageable picture of the human being
