Society and Exploitation Through Nature Martin Phillips, 2017-06-28 Society and Exploitation Through Nature offers an integrated approach to the environment linking the philosophical social and physical sciences to environmental problems and issues The text covers three main themes exploitation of nature and society the limits of exploitation through sustainability and managing environmental problems These themes are illustrated throughout the book with global case studies Society and Exploitation Through Nature Martin Phillips, Tim Mighall, 2014-06-06 Society and Exploitation Through Nature offers an integrated approach to the environment linking the philosophical social and physical sciences to environmental problems and issues The text covers three main themes exploitation of nature and society the limits of exploitation through sustainability and managing environmental problems These themes are illustrated throughout the book with global case studies

Valuing Nature Robert Fish, Holly McKelvey, 2021-11-16 When a group of liberal arts students embark on a university assignment about the natural environment no one could have quite prepared them for the bewildering array of questions and provocations to confront them in their task What starts out as an earnest attempt to understand nature in the modern world turns into a philosophical and practical tangle that only a good transdisciplinary education can provide Can anyone save the day and actually start to value nature And if they can't then what's stopping them The idea of valuing nature harmonises diverse areas of natural resource management and is an important dimension of scientific and practical work concerned with managing ecosystems and habitats for sustainability This graphic book takes the reader on an exploration of the issues that arise from this growing interest and concern in the valuation of nature Set around the premise of a motley group of undergraduates endeavouring to complete a university assignment on nature in the modern world the book explores the many and diverse meanings people assign to nature the different ways the relationship between people and nature might be characterised the many values systems people hold for the natural world the options and approaches society can deploy to manage it the extent to which we need entirely new economic systems to protect and sustain nature This highly interdisciplinary book invites consideration of a range of philosophical and applied debates and questions Written in an accessible style it is an ideal undergraduate text in the fields of ecology human and physical geography conservation science environment social science and spatial planning as well as a general primer for graduate natural and social scientists embarking on interdisciplinary research in the natural resource management arena **Climate Change and Society** John Urry, 2011-06-20 This is the first book to develop a proper sociology of climate change and will be an excellent companion to Tony Giddens The Politics of Climate Change Creation and Hope Nicola Hoggard Creegan, Andrew Shepherd, 2018-04-25 We live in an ecological age Science in the last few hundred years has given us a picture of nature as blind to the future and mechanical in its workings even while ecology and physics have made us aware of our interconnectedness and dependency upon the web of life As we witness a possible sixth great mass extinction there is increasing awareness too of the fragility of

life on this planet In such a context what is the nature of Christian hope St Paul declares that all of creation will be set free from its bondage to decay and will obtain the freedom of the glory of the children of God How are we to imagine this freedom when death and decay are essential to biological life as we currently experience it and when the scientific predictions for life are bleak at best This book explores these questions reflecting on how our traditions shape our imagination of the future and considering how a theology of hope may sustain Christians engaged in conservation initiatives The essays in this volume are partly in dialogue with the ground breaking work of Celia Deane Drummond and are set in the context of global and local Aotearoa New Zealand ecological challenges

Key Texts in Human Geography Phil Hubbard, Rob Kitchin, Gill Valentine, 2008-05-19 A book that will delight students Key Texts in Human Geography is a primer of 26 interpretive essays designed to open up the subject's landmark monographs of the past 50 years to critical interpretation The essays are uniformly excellent and the enthusiasm of the authors for the project shines through It will find itself at the top of a thousand module handouts THE Textbook Guide Will surely become a key text itself Read any chapter and you will want to compare it with another Before you realize an afternoon is gone and then you are tracking down the originals Professor James Sidaway University of Plymouth An essential synopsis of essential readings that every human geographer must read It is highly recommended for those just embarking on their careers as well as those who need a reminder of how and why geography moved from the margins of social thought to its very core Barney Warf Florida State University Undergraduate geography students are often directed to key texts in the literature but find them difficult to read because of their language and argument As a result they fail to get to grips with the subject matter and gravitate towards course textbooks instead Key Texts in Human Geography serves as a primer and companion to the key texts in human geography published over the past 40 years It is not a reader but a volume of 26 interpretive essays highlighting the significance of the text how the book should be read reactions and controversies surrounding the book the book's long term legacy It is an essential reference guide for all students of human geography and provides an invaluable interpretive tool in answering questions about human geography and what constitutes geographical knowledge

Technonatures Damian F. White, Chris Wilbert, 2010-04-05 Environmentalism and social sciences appear to be in a period of disorientation and perhaps transition In this innovative collection leading international thinkers explore the notion that one explanation for the current malaise of the politics of ecology is that we increasingly find ourselves negotiating technonatural space times International contributors map the political ecologies of our technonatural present and indicate possible paths for technonatural futures The term technonatures is in debt to a long line of environmental cultural theory from Raymond Williams onwards problematizing the idea that a politics of the environment can be usefully grounded in terms of the rhetoric of defending the pure the authentic or an idealized past solely in terms of the ecological or the natural In using the term technonatures as an organizing myth and metaphor for thinking about the politics of nature in contemporary times this collection seeks to explore one increasingly

pronounced dimension of the social natures discussion Technonatures highlights a growing range of voices considering the claim that we are not only inhabiting diverse social natures but that within such natures our knowledge of our worlds is ever more technologically mediated produced enacted and contested **Geodiversity** Murray Gray,2004-06-25 A counterpoint to biodiversity geodiversity describes the rocks sediments soils fossils landforms and the physical processes that underlie our environment The first book to focus exclusively on the subject Geodiversity describes the interrelationships between geodiversity and biodiversity the value of geodiversity to society as well as current threats to its existence Illustrated with global case studies throughout the book examines traditional approaches to protecting biodiversity and the new management agenda which is starting to be used instead **Contemporary Meanings in Physical Geography** Andre Roy,Stephen Trudgill,2014-04-08 Over the past twenty years geography as an academic discipline has become more and more reflective asking the key questions What are we doing Why are we doing it These questions have so far been more enthusiastically taken up by human geography rather than physical geography Contemporary Meanings in Physical Geography aims to redress the balance Written and edited by a distinguished group of physical geographers Contemporary Meanings in Physical Geography comprises of a collection of international writer s thoughts which reveal personal motivations and look at tensions in the worlds of meaning in which physical geography is involved How are the meanings of the physical environment derived Is the future of physical geography one where the only or at least the dominant meanings are framed in the contexts of environmental issues Covering a diverse and lively selection of topics the contributors of this book offer guides to the contemporary debates in the philosophy of physical geography and introduce the reader to its wider cultural significance This book is an essential companion to anyone studying or with an interest in physical geography **Coastal Management Revisited** Bernhard Glaeser,Marion Glaser,2023-01-31 The book presents an overview and historic perspectives of a novel scientific field coming of age today coastal and ocean management It covers diverse and changing issues ranging from conflict resolution to governance and ethical political imperatives natural disasters and climate change culminating in coastal and ocean typologies the basis for a future theory of coasts and oceans Eighteen chapters written by two main authors in cooperation with international experts review 25 years of research The authors address challenges to society related to global change issues that have been generated by human activity in both temperate Sweden Germany and the United States and tropical regions Brazil Indonesia Ultimately the book documents the maturation of a field and responds to changing societal needs and scientific outlooks It gathers recent analyses along with important earlier research with a foreword by Biliana Cicin Sain and Richard Delaney globally renowned as coastal and ocean experts in theory and practice Its broad approach makes the book a must read for graduate and postgraduate students as well as coastal management and marine spatial planning practitioners and for researchers in the fields of geography anthropology history of science human and social ecology and environmental and development studies **Transdisciplinary Impulses towards Socio-Ecological**

with a detailed analysis of the potential contributions of occupational therapists to their societies Focus on the social role of occupational therapy highlights the role of occupational therapy as a social profession and prepares readers to respond to social issues Theoretical and practical chapters talk about occupational therapy and social challenges Emphasis on human rights and social issues reflects the World Federation of Occupational Therapists Minimum Standards for the Education of Occupational Therapists

How to be a Green Liberal Simon A. Hailwood, 2014-12-18 It is often claimed by environmental philosophers and green political theorists that liberalism the dominant tradition of western political philosophy is too focused on the interests of human individuals to give due weight to the environment for its own sake In *How to be a Green Liberal* Simon Hailwood challenges this view and argues that liberalism can embrace a genuinely green non instrumental view of nature The book s central claim is that nature s otherness its being constituted of independent entities and processes that do not reflect our purposes is a basis for value and can be incorporated within liberal political philosophy as a fundamental commitment alongside human freedom and equality Hailwood argues that the conceptual resources already exist within mainstream liberalism for a thoroughly non instrumental perspective Adopting a rigorous philosophical approach Hailwood tackles a wide range of themes across environmental ethics including holistic theories deep ecology eco feminism and eco anarchism as well as issues in value theory and political philosophy more generally In making the case for liberalism s green credentials *How to be a Green Liberal* is a formidable challenge to recent green political theory and will be required reading not only for students of political philosophy but for all those interested in the natural world and man s relationship to it

Foucault and the History of Philosophical Transcendence Christopher Falzon, 2024-08-22 In an original approach to Foucault s philosophy Christopher Falzon argues for a reading of Foucault as a philosopher of finite transcendence and explores its implications for ethics In order to distinguish Foucault s position Falzon charts the historical trajectory of transcendence as a philosophical concept starting with the radical notion of transcendence that was introduced by Plato and which reappears in various forms in subsequent thinkers from the Stoics to Descartes and from Kant to Sartre He argues that Foucault s critique of the transcendent subject of humanism is a rejection not of transcendence per se but of radical transcendence in its distinctively modern form As such he shows how Foucault s conceptualisation of transcendence as finite enables a picture of the human being as neither fully determined nor a creature of infinite possibilities but as both subject and object affected by but also able to affect the world With the notion of finite transcendence Falzon captures the essence of Foucault s unique philosophy and provides a new insight into his contribution to ethics Demonstrating its contemporary relevance *Foucault and the History of Philosophical Transcendence* further explores the potential application of Foucault s approach to the current ecological crisis

Natural Resource Use and Global Change K. Bruckmeier, 2013-01-21 Building on recent developments in social ecology this book advances a new critical theory of society and nature exploring social metabolism and global resource flows in contemporary society Barriers to global sustainability are identified and

conditions for transforming industrial economies towards new sustainable resource use are described
