

Spinning Dust: Power Spectrum

- Torque-free motion: Euler angles ϕ , ψ , θ , and rates

$$\dot{\theta} = 0, \dot{\psi} = \frac{J \cos \theta (1 - h)}{I_1}, \dot{\phi} = \frac{J}{I_2}$$

- Electric dipole moment $\mu(J, \theta, t) = \mu_1 \hat{a}_1 + \mu_2 \hat{a}_2$
- Fourier Transform: $\tilde{\mu}(J, \theta, t) = \mu_1 \tilde{a}_1 + \mu_2 \tilde{a}_2$

$$\tilde{A}_{i,k} = \int_0^{\infty} \tilde{A}_i(t) \exp(-i2\pi\nu_k t) dt, i = x, y, z$$

- Power Spectrum:

$$P_{\text{cd},k}(J, \theta) = \frac{2}{3c^3} \sum_i (\tilde{A}_{i,k})^2$$

Spinning Dust:

Diffuse Radio Foregrounds Matias Vidal Navarro, 2015-12-15 This extensive thesis work covers several topics including intensity and polarization focusing on a new polarization bias reduction method Vidal studied data from the WMAP satellite which is low signal to noise and as such has to be corrected for polarization bias He presents a new method for correcting the data based on knowledge of the underlying angle of polarization Using this novel method he sets upper limits for the polarization fraction of regions known to emit significant amounts of spinning dust emissions He also studies the large scale loops and filaments that dominate the synchrotron sky The dominant features are investigated including identification of several new features For the North Polar Spur a model of an expanding shell in the vicinity of the Sun is tested which appears to fit the data Implications for CMB polarization surveys are also discussed In addition Vidal presents interferometric observations of the dark cloud LDN 1780 at 31 GHz and shows that the spinning dust hypothesis can explain the radio properties observed

Polarimetry of Stars and Planetary Systems Ludmilla Kolokolova, James Hough, Anny-Chantal Levasseur-Regourd, 2015-05-14 Summarising the striking advances of the last two decades this reliable introduction to modern astronomical polarimetry provides a comprehensive review of state of the art techniques models and research methods Focusing on optical and near infrared wavelengths each detailed up to date chapter addresses a different facet of recent innovations including new instrumentation techniques and theories new methods based on laboratory studies enabling the modelling of polarimetric characteristics for a wide variety of astronomical objects emerging fields of polarimetric exploration including proto planetary and debris discs icy satellites transneptunian objects exoplanets and the search for extraterrestrial life and unique results produced by space telescopes and polarimeters aboard exploratory spacecraft With contributions from an international team of accomplished researchers this is an ideal resource for astronomers and researchers working in astrophysics earth sciences and remote sensing keen to learn more about this valuable diagnostic tool The book is dedicated to the memory of renowned polarimetrist Tom Gehrels

Structure Formation in the Universe Robert G. Crittenden, 2012-12-06 This book contains a series of lectures given at the NATO Advanced Study Institute ASI Structure Formation in the Universe held at the Isaac Newton Institute in Cambridge in August 1999 The ASI was held at a critical juncture in the development of physical cosmology when a flood of new data concerning the large scale structure of the Universe was just becoming available There was an air of excitement and anticipation would the standard theories fit the data or would new ideas and models be required Cosmology has long been a field of common interest between East and West with many seminal contributions made by scientists working in the former Soviet Union and Eastern bloc A major aim of the ASI was to bring together scientists from across the world to discuss exciting recent developments and strengthen links However a few months before the meeting it appeared that it might have to be cancelled The war in the former Yugoslavia escalated and NATO began a protracted bombing campaign against targets in Kosovo and Serbia Many scientists

felt uneasy about participating in a NATO funded meeting in this situation After a great deal of discussion it was agreed that the developing East West conflict only heightened the need for further communication and that the school should go ahead as planned but with a special session devoted to discussion of the legitimacy of NATO s actions

Questions of Modern Cosmology Mauro D'Onofrio, Carlo Burigana, 2009-07-09 Are we living in the golden age of cosmology Are we close to understanding the nature of the unknown ingredients of the currently most accepted cosmological model and the physics of the early Universe Or are we instead approaching a paradigm shift What is dark matter and does it exist How is it distributed around galaxies and clusters Is the scientific community open to alternative ideas that may prompt a new scientific revolution as the Copernican revolution did in Galileo s time Do other types of supernovae exist that can be of interest for cosmology Why have quasars never been effectively used as standard candles Can you tell us about the scientific adventure of COBE How does the extraction of the Cosmic Microwave Background anisotropy depend on the subtraction of the various astrophysical foregrounds These among many others are the astrophysical philosophical and sociological questions surrounding modern cosmology and the scientific community that Mauro D Onofrio and Carlo Burigana pose to some of the most prominent cosmologists of our time Triggered by these questions and in the spirit of Galileo s book Dialogue Concerning the Two Chief World Systems the roughly 40 interview partners reply in the form of essays with a critical frankness not normally found in reviews monographs or textbooks

Spin In Gravity - Is It Possible To Give An Experimental Basis To Torsion? Vanzo De Sabbata, P G Bergmann, P I Pronin, George T Gillies, 1998-07-08 The introduction of spin is believed to be a necessary tool if one wishes to quantize general relativity Then the main problem is to see if the introduction of spin generalizing the general relativity from a geometric point of view i e through the concept of torsion can be experimentally verified The reader can find in this book both theoretical and experimental arguments which show the necessity for the introduction of spin and then of torsion in gravity In fact torsion constitutes the more natural and simple way to introduce spin in general relativity For that reason it is of fundamental importance to see if there are some experiences that indicate if not directly then at least indirectly the presence of torsion This book presents a discussion on experiments with a polarized mass torsion pendulum the search for galactic dark matter interacting with a spin pendulum a description of a space based method for determination of the gravitational constant and space based measurements of spin in gravity as well as a discussion on theoretical arguments for instance the nature of torsion and nonmetricity the viability of gravitational theories with spin torsion and spin spin interaction many dimensional gravitational theories with torsion spinors on curved spaces the spinors in real space time etc We know that until now there has been no evidence for torsion but this fact cannot prevent us from considering in some detail this implement of research that seems to be important from both a geometrical and a physical point of view

Cosmic Magnetic Fields (IAU S259) International Astronomical Union. Symposium, 2009-06-11 Cosmic magnetic fields play a key role in the formation structure and evolution of planets stars and

galaxies and possibly the Universe as a whole Magnetic fields of celestial bodies have been studied for a century since the discovery of the first extraterrestrial magnetic field by George Ellery Hale in 1908 but their origin and evolution remain open questions for fundamental physics and astrophysics IAU Symposium 259 presents the first interdisciplinary and yet comprehensive review of the role of magnetic fields on all scales that involved astronomers and physicists from across the community It gives a balanced account of both theoretical and observational aspects of topics ranging from Earth's habitability to the origin of the universe This volume gives a forefront research account on the current state of the art
