*Optical and Wireless Communications* Matthew N.O. Sadiku, 2018-10-08 Optical and wireless technologies are being introduced into the global communications infrastructure at an astonishing pace Both are revolutionizing the industry and will undoubtedly dominate its future yet in the crowded curricula in most electrical engineering programs there is no room in typical data communications courses for proper coverage of these next generation technologies Optical and Wireless Communications Next Generation Networks covers both types of networks in a unique presentation designed for a one semester course for senior undergraduate or graduate engineering students Part I Optical Networks covers optical fibers transmitters receivers multiplexers amplifiers and specific networks including FDDI SONET fiber channel and wavelength routed networks Part II Wireless Networks examines fundamental concepts and specific wireless networks such as LAN ATM wireless local loop and wireless PBXs This section also explores cellular technologies and satellite communications Eventually next generation networks will be as ubiquitous as traditional telephone networks and today s engineering students must be prepared to meet the challenges of optical and wireless systems development and deployment Filled with illustrations examples and end of chapter problems Optical and Wireless Communications Next Generation Networks provides a brief but comprehensive introduction to these technologies that will help future engineers build the foundation they need for success

Path Routing in Mesh Optical Networks Eric Bouillet, Georgios Ellinas, Jean-Francois Labourdette, Ramu Ramamurthy, 2007-10-24 Transport networks evolved from DCS Digital Cross connect Systems based mesh architectures to SONET SDH Synchronous Optical Networking Synchronous Digital Hierarchy ring architectures in the 1990 s In the past few years technological advancements in optical transport switches have allowed service providers to support the same fast recovery in mesh networks previously available in ring networks while achieving better capacity efficiency and resulting in lower capital cost Optical transport networks today not only provide trunking capacity to higher layer networks such as inter router connectivity in an IP centric infrastructure but also support efficient routing and fast failure recovery of high bandwidth services This is possible due to the emergence of optical network elements that have the intelligence required to efficiently control the network Optical mesh networks will enable a variety of dynamic services such as bandwidth on demand Just In Time bandwidth bandwidth scheduling bandwidth brokering and optical virtual private

networks that open up new opportunities for service providers and their customers alike Path Routing in Mesh Optical Networks combines both theoretical as well as practical aspects of routing and dimensioning for mesh optical networks All authors have worked as technical leaders for the equipment vendor Tellium who implemented such capabilities in its product and whose product was deployed in service provider networks Path Routing in Mesh Optical Networks Presents an in depth treatment of a specific class of optical networks i e path oriented mesh optical networks Focuses on routing and recovery dimensioning performance analysis and availability in mesh optical networks Explains and analyses routing specifically associated with Dedicated Backup Path Protection DBPP and Shared Backup Path Protection SBPP recovery architectures As most of the core backbone networks evolve to mesh topologies utilizing intelligent network elements for provisioning and recovery of services Path Routing in Mesh Optical Networks will be an invaluable tool for both researchers and engineers in the industry who are responsible for designing developing deploying and maintaining mesh optical networks It will also be a useful reference book for graduate students and university professors who are interested in optical networks or telecommunications networking With a foreword by Professor Wayne D Grover author of the book Mesh Based Survivable Networks

**Optical Computing Hardware** Jürgen Jahns, Sing H. Lee, 2014-05-10 Optical Computing Hardware provides information pertinent to the advances in the development of optical computing hardware This book discusses the two application areas namely high performance computing and high throughput photonic switching Organized into 11 chapters this book begins with an overview of the requirements on hardware from a system perspective This text then presents the self electro optic effect devices SPEED the vertical cavity surface emitting microlasers VCSEL and the vertical to surface transmission electrophotonic device VSTEP Other chapters consider the fundamental principles of the devices and their operation either as logic devices or for optical interconnection applications This book discusses as well the planar optical microlens as an example of a refractive microlens of the gradient index type and explains the diffractive optical elements The final chapter describes a method for writing and reading optically in parallel from a three dimensional matrix by means of two photon interaction in photochromic organic materials This book is a valuable resource for engineers scientists and researchers
