Cross, 2015-05-01 When the members of Canada's First Arctic Expedition set out from Victoria aboard HMCS Karluk in the summer of 1913 it was a moment of great optimism The three year mission would chart unexplored landmasses of the Western Arctic and secure Canada's place in the international geographic community Little did the team of distinguished scholars and scientists realize however how their

hopes would soon be brought to ruin Just a few months into the journey the vessel became lodged in heavy ice eventually sinking near the coast of Siberia With little polar experience among them but ample supplies salvaged from the wreck the group of castaways slowly made their way to solid ground on desolate Wrangel Island There they would wait while the ship's captain and an Inuk guide embarked on a heroic 1 100 kilometre trek along the Siberian coast in search of help By the end of the fifteen month saga eleven members of the original expedition would perish from frostbite and sickness while the remaining twenty would survive to tell the tale The Luck of the Karluk is a fascinating story about an important episode in Canada's history and a revealing study of the strengths and weaknesses of human nature under treacherous conditions

Breaking Ice for Arctic Oil Ross Coen,2012-04-15 In 1969 an icebreaking tanker the SS Manhattan was commissioned by Humble Oil to transit the Northwest Passage in order to test the logistical and economic feasibility of an all marine transportation system for Alaska North Slope crude oil Proposed as an alternative to the Trans Alaska Pipeline the Manhattan made two voyages to the North American Arctic and collected volumes of scientific data on ice conditions and the behavior of ships in ice Although the Manhattan successfully navigated the Northwest Passage closing a five hundred year chapter of Arctic exploration by becoming the first commercial vessel to do so the expedition ultimately demonstrated the impracticality of moving crude oil using icebreaking ships Breaking Ice for Arctic Oil details this historic voyage establishing its significant impact on the future of marine traffic and resource development in the Arctic and setting the stage for the current oil crisis

The Polar Regions Adrian Howkins, 2015-11-20 The environmental histories of the Arctic and Antarctica are characterised by contrast and contradiction. These are places that have witnessed some of the worst environmental degradation in recent history. But they are also the locations of some of the most farsighted measures of environmental protection. They are places where people have sought to conquer nature through exploration and economic development but in many ways they remain wild and untamed. They are the coldest places on Earth yet have come to occupy an important role in the science and politics of global warming. Despite being located at opposite ends of the planet and being significantly different in many ways, Adrian Howkins argues that the environmental histories of the Arctic and Antarctica share much in common and have often been closely connected. This book also argues that the Polar Regions are strongly linked to the rest of the world both through physical processes and through intellectual and political themes. As places of inherent contradiction, the Polar Regions have much to contribute to the way we think about environmental history and the environment more generally.

Iceland's Arctic Policies and Shifting Geopolitics Valur Ingimundarson, 2024-11-26 This book examines the role of the Arctic in Iceland's foreign and security policies from the end of the Cold War to the present. Based on extensive research and drawing on approaches from the fields of history and international relations, it shows that Iceland's Arctic policies have gone through multiple phases during this period, all of which have been heavily influenced by external geopolitical factors, including its relationship with the United States, the 2008 financial crisis, the rise of China, and the Ukrainian crisis. It also demonstrates how Iceland's strategic position in the North Atlantic has important repercussions for the United States, Russia, and China. With an emphasis on geopolitics, nation branding, and governance, this book will appeal to scholars and students of Arctic policies, geopolitics, and international relations.

Vilhjalmur Stefansson Tom Henighan, 2009-03-09 Born in Manitoba of Icelandic parents, Vilhjalmur Stefansson (1879-1962) became one of Canada's most famous and controversial Arctic explorers. After graduate studies in anthropology at Harvard University, Stefansson lived with and studied Inuit in the Mackenzie River Delta in the Northwest Territories in the winter of 1906-07. In two subsequent expeditions, he completed a major anthropological survey of the Central and Western Arctic coasts and islands of North America, located and lived with the Copper Inuit, a previously unknown group of aboriginal people, and discovered the world's last major land masses. During his third and final great Arctic expedition from 1913 to 1918, some of Stefansson's men perished tragically, an outcome that severely damaged his reputation. Nevertheless, the hardy explorer contributed immensely to knowledge about the Far North, particularly in his championing of the Friendly Arctic. Part scientist, part showman.

Vilhjalmur Stefansson was truly unique among polar adventurers *Extreme Conservation* Joel Berger, 2018-08-02

Extraordinary Berger is a hero of biology who deserves the highest honors that science can bestow. Tim Flannery, New York Review of Books. On the Tibetan Plateau there are wild yaks with blood cells thinner than those of horses by half, enabling the endangered yaks to survive at 40 below zero and in the lowest oxygen levels of the mountaintops. But climate change is causing the snow patterns here to shift, and with the snows the entire ecosystem. Food and water are vaporizing in this warming environment, and these beasts of ice and thin air are extraordinarily ill equipped for the change. A journey into some of the most forbidding landscapes on earth. Joel Berger's *Extreme Conservation* is an eye-opening, steely look at what it takes for animals like these to live at the edges of existence. But more than this, it is a revealing exploration of how climate change and people are affecting even the most far-flung niches of our planet. Berger's quest to understand these creatures struggles takes him to some of the most remote corners and peaks of the globe: across Arctic tundra and the frozen Chukchi Sea to study muskoxen; into the Bhutanese Himalayas to follow the rarely sighted takin; and through the Gobi Desert to track the proboscis swinging saiga. Known as much for his rigorous scientific methods of developing solutions to conservation challenges as for his penchant for donning moose and polar bear costumes to understand the mindsets of his subjects more closely, Berger is a guide par excellence. He is a scientist and storyteller who has made his life working with desert nomads in zones that typically require Sherpas and oxygen canisters. Recounting animals as charismatic as their landscapes are extreme, Berger's unforgettable tale carries us with humor and expertise to the ends of the earth and back. But as his adventures show, the more adapted a species has become to its particular ecological niche, the more devastating climate change can be. Life at the extremes is more challenging than ever, and the need for action for solutions has never been greater. **Making of an Explorer** Stuart E. Jenness, 2004-11-01

Wilkins was originally seconded to Stefansson's Arctic Expedition for a year as its official photographer, but circumstances forced him to stay in the Arctic for three years. He spent much of those extra two years in discussion with Stefansson, becoming his life-long friend. *The Making of an Explorer* describes Wilkins' successful expedition to Banks Island in 1914 in search of Stefansson and his subsequent relationship with Stefansson, his significant role and contribution as second in command of Stefansson's polar explorations over the next two years, his remarkable collection of films and photographs of the little-known Copper Eskimos in the Central Arctic, and his large but virtually unknown original collection of birds and mammals from Banks Island for the National Museum of Canada.
