

Project Initiation Document

Project Definition

To begin, you need to define the project, providing a brief overview of its:

- **Purpose:** The reason for initiating the project, such as fill a niche, launch a new product, etc.
- **Goals & Objectives:** List goals (long-term outcomes) and objectives (short-term outcomes)
- **Success Criteria:** How project will be measured to determine if it's successful
- **Assumptions & Constraints:** List assumptions (assumed true) and constraints (proven true)

Business Case

A business case is a document that justifies the existence of the project. It will be more thorough than the above project definition, which is more an overview, and define the project's benefits, cost and risks and provide a reason to go forward with the project. (Attach document)

Project Scope

Project scope is a document that defines the goals, constraints, workflow management, strategies, tasks and deliverables of the project. Again, while some of this is touched upon in the project definition section, this is a more comprehensive document of all the work to be done in the project, which will help manage the workload better. (Attach document)

Project Budget

The project budget is an estimate of all the costs related to completing the project. Estimate each phase separately and look back at historical data for the cost of similar projects to have a more accurate forecast. Experts and the project team should also be consulted. (Attach document)

Project Timeline

Here you'll want to create the project schedule, including all tasks, deadlines and milestones, and map them on a timeline. (Attach document)

The Initiation of DNA Replication in Eukaryotes Daniel L. Kaplan, 2016-02-11 Every time a cell divides a copy of its genomic DNA has to be faithfully copied to generate new genomic DNA for the daughter cells The process of DNA replication needs to be precisely regulated to ensure that replication of the genome is complete and accurate but that re replication does not occur Errors in DNA replication can lead to genome instability and cancer The process of replication initiation is of paramount importance because once the cell is committed to replicate DNA it must finish this process A great deal of progress has been made in understanding how DNA replication is initiated in eukaryotic cells in the past ten years but this is the first one source book on these findings The Initiation of DNA Replication in Eukaryotes will focus on how DNA replication is initiated in eukaryotic cells While the concept of replication initiation is simple its elaborate regulation and integration with other cell processes results in a high level of complexity This book will cover how the position of replication initiation is chosen how replication initiation is integrated with the phases of the cell cycle and how it is regulated in the case of damage to DNA It is the cellular protein machinery that enables replication initiation to be activated and regulated We now have an in depth understanding of how cellular proteins work together to start DNA replication and this new resource will reveal a mechanistic description of DNA replication initiation as well

Introduction to Genetics: A Molecular Approach T A Brown, 2012-03-22 Introduction to Genetics A Molecular Approach is a new textbook for first and second year undergraduates It first presents molecular structures and mechanisms before introducing the more challenging concepts and terminology associated with

transmission genetics Advances in Cell Biology David M. Prescott, 2013-06-29 Advances in Cell Biology has been initiated as a continuing multi volume series to report on the progress of a wide spectrum of problems of cell structure and cell function In arranging these volumes individual contributors are asked not only to review the major new information but especially to present the state of a given problem or area by discussing the current central issues speculations concepts hypotheses and technical problems We intend in addition that these volumes will not be concerned with comprehensive reviews of the recent literature but will consist rather of presentations of an interpretive and integrative nature based on selection of major research advances It is our aim that these volumes should provide the means whereby cell biologists may keep themselves reasonably well informed about the current progress in research areas in cell biology in which they are not immediately or directly involved themselves The articles nevertheless are expected to bring into focus the experimental objectives of the specialists in a given research area D M P L G E M vii Contents Contributors v Preface vii 1 1 The Regulation of DNA Synthesis in Eukaryotes James Douglas Watson 2 D RNA Containing Ribonucleoprotein Particles and Messenger RNA Transport 47 G P Georgiev and O P Samarina Recent Developments in the Synchronization of 3 Tetrahymena Cell Cycle 111 Eric Zeuthen 153 4 Repetitious DNA Christopher Bostock 5 Mitosis 225 R Bruce Nicklas Specific Enzyme Production in Eukaryotic Cells 299 6 **Cell and Molecular Biology of Plastids** Ralph Bock, 2007-09-19 The present book provides a comprehensive overview of our current knowledge on plastid biogenesis plastid nuclear communication and the regulation of plastid gene expression at all levels It also assesses the state of the art in key technologies such as proteomics and chloroplast transformation Written by recognized experts in the field the book further covers crucial post translational processes in plastid biogenesis and function including protein processing **EJB Reviews 1990** P. Christen, E. Hofmann, 2012-12-06 In the mid 1980s the European Journal of Biochemistry set out to publish review articles The enterprise proved successful resulting in high level reviews written by well known scientists appearing in the Journal The reviews represent emerging and rapidly growing fields of research in fundamental as well as applied areas of biochemistry such as medicine biotechnology agriculture and nutrition Novel methodological and technological approaches which stimulate biochemical research are also included The authors of the reviews are explicitly asked to be critical selective evaluative and interdisciplinarily oriented The reviews should encourage young scientists toward independent and creative thinking and inform active investigators about the state of the art in a given field **Ribosomes** Alexander Spirin, 2013-03-09 This book is based on an advanced course of lectures on ribosome structure and protein biosynthesis that I offer at the Moscow State University These lectures have been part of a general course on molecular biology for almost three decades and they have undergone considerable evolution as knowledge has been progressing in this field The progress continues and readers should be prepared that some facts statements and ideas included in the book may be incomplete or out of date In any case this is primarily a textbook but not a comprehensive review It provides a background of knowledge and current ideas in the

field and gives examples of observations and their interpretations I understand that some interpretations and generalizations may be tentative or disputable but I hope that this will stimulate thinking and discussing better than if I left white spots The book has a prototype it is my monograph Ribosome Structure and Protein Biosynthesis published by the Benjamin Cummings Publishing Company Menlo Park California in 1986 Here I have basically kept the former order of presentation of the topics and the subdivision into chapters The contents of the chapters however have been significantly revised and supplemented The newly written chapters on translational control in prokaryotes Chapter 16 and eukaryotes Chapter 17 are added
