Image, Language, Brain Alec Marantz, Yasushi Miyashita, Wayne O'Neil, Wayne A. O'Neil, 2000 The papers in this volume discuss the current

status of the cognitive neuroscience synthesis in research on vision whether and how linguistics and neuroscience can be integrated and how integrative brain mechanisms can be studied through the use of noninvasive brain imaging techniques Recent attempts to unify linguistic theory and brain science have grown out of recognition that a proper understanding of language in the brain must reflect the steady advances in linguistic theory of the last forty years The first Mind Articulation Project Symposium addressed two main questions How can the understanding of language from linguistic research be transformed through the study of the biological basis of language And how can our understanding of the brain be transformed through this same research The best model so far of such mutual constraint is research on vision Indeed the two long term goals of the Project are to make linguistics and brain science mutually constraining in the way that has been attempted in the study of the visual system and to formulate a cognitive theory that more strongly constrains visual neuroscience The papers in this volume discuss the current status of the cognitive neuroscience synthesis in research on vision whether and how linguistics and neuroscience can be integrated and how integrative brain mechanisms can be studied through the use of noninvasive brain imaging techniques Contributors Noam Chomsky Ann Christophe Robert Desimone Richard Frackowiak Angela Friederici Edward Gibson Peter Indefrey Masao Ito Willem Levelt Alec Marantz Jacques Mehler Yasushi Miyashita David Poeppel Franck Ramus John Reynolds Kensuke Sekihara Hiroshi Shibasaki Life with Two Languages François Grosjean, 1982 Many people consider bilinguals to be exceptional yet almost half the world's population speaks more than one language Bilingualism is found in every country of the world in every class of society in all age groups Life with Two Languages is the first book to provide a complete and authoritative look at the nature of the bilingual experience François Grosjean himself a bilingual covers the topic from each of its many angles in order to provide a balanced introduction to this fascinating phenomenon Grosjean discusses the political and social situations that arise when languages come into contact and the policies nations have established toward their linguistic minorities in the domains of education and governance Of particular interest is his detailed account of the psychological and social factors that lead a bilingual to choose one of her languages when speaking to another bilingual or to use both languages in the fascinating phenomenon of code switching The author explains how children become bilingual as quickly as they become monolingual describes the organization of languages in the bilingual brain and examines the legacy of bilingualism on language as exemplified in word borrowings Above all Life with Two Languages puts the emphasis on the bilingual person In a series of first hand reports scattered throughout the book bilinguals tell what it is like to live with two languages and describe the educational and social experiences they have undergone Written in a clear and informative style Life with Two Languages will appeal to professionals and students in linguistics education sociology and psychology as well as to the more casually curious How the Brain Got Language , Unlike any other species humans can learn and use language This book explains how the brain evolved to make language possible through what Michael Arbib calls the Mirror System Hypothesis Because of mirror

neurons monkeys chimps and humans can learn by imitation but only complex imitation which humans exhibit is powerful enough to support the breakthrough to language This theory provides a path from the openness of manual gesture which we share with nonhuman primates through the complex imitation of manual skills pantomime protosign communication based on conventionalized manual gestures and finally to protospeech The theory explains why we humans are as capable of learning sign languages as we are of learning to speak This fascinating book shows how cultural evolution took over from biological evolution for the transition from protolanguage to fully fledged languages The author explains how the brain mechanisms that made the original emergence of languages possible perhaps 100 000 years ago are still operative today in the way children acquire language in the way that new sign languages have emerged in recent decades and in the historical processes of language change on a time scale from decades to centuries Though the subject is complex this book is highly readable providing all the necessary background in primatology neuroscience and linguistics to make the book accessible to a general audience

Cedric Boeckx, María del Carmen Horno-Chéliz, 2012-03-15 The present volume offers a collection of essays covering a broad range of areas where currently a rapprochement between linguistics and biology is actively being sought Following a certain tradition we call this attempt at a synthesis biolinguistics The nine chapters grouped into three parts Language and Cognition Language and the Brain and Language and the Species offer a comprehensive overview of issues at the forefront of biolinguistic research such as language structure language development linguistic change and variation language disorders and language processing the cognitive neural and genetic basis of linguistic knowledge or the evolution of the Faculty of Language Each contribution highlights exciting prospects for the field but they also point to significant obstacles along the way The main conclusion is that the age of theoretical exclusivity in Linguistics much like the age of theoretical specificity

will have to end if interdisciplinarity is to reign and if biolinguistics is to flourish

communication **Multidisciplinary Perspectives on Multilingualism** Simona Montanari, Suzanne Quay, 2019-10-08

Multilingualism is a typical aspect of everyday life for most of the world's population; it has existed since the beginning of humanity and among individuals of all backgrounds. Nonetheless, it has often been treated as a variant of bilingualism or as a phenomenon unique to individual areas of study. The purpose of this book is to review current knowledge about the acquisition, use, and loss of multiple languages using a multidisciplinary perspective, highlighting the common themes and stimulating insights that can emerge when multilingualism is viewed from different but related areas of investigation. The chapters focus on research evidence showing that multilingualism is a complex phenomenon that involves a myriad of linguistic and extra-linguistic forces and that should be studied in its own right as evidence of human potential and capacity for language. The book is primarily addressed to students and scholars interested in deepening their understanding of the different facets of multilingualism, including the individual and societal circumstances that contribute to it, the cognitive and neural mechanisms that make it possible, and the dynamics involved in the acquisition, use, and loss of multiple languages.

acquisition Approaches to the Evolution of Language James R. Hurford, Michael Studdert-Kennedy, Chris Knight, 1998-09-17 This is one of the first systematic attempts to bring language within the neo-Darwinian framework of modern evolutionary theory without abandoning the vast gains in phonology and syntax achieved by formal linguistics over the past forty years. The contributors, linguists, psychologists, and paleoanthropologists, address such questions as: what is language as a category of behavior? Is it an instrument of thought or of communication? What do individuals know when they know a language? What cognitive, perceptual, and motor capacities must they have to speak, hear, and understand a language? For the past two centuries, scientists have tended to see language function as largely concerned with the exchange of practical information. By contrast, this volume takes as its starting point the view of human intelligence as social and of language as a device for forming alliances.
