Metropolitan Problems S. Miles, 2013-05-13 Metropolitan Problems is the end product of one of the most dynamic research programmes of its kind ever conceived and executed The book which took three years to complete represents the culmination of a two year study that was highlighted by a conference held in Toronto in 1967 In the early 1960s the Bureau of Municipal Research in Metropolitan Toronto decided that a significant way for it to celebrate Canada's centennial would be to initiate a systematic international study of the world's metropolitan areas The study with the official cooperation of the United Nations was designed to produce positive insights into the methods of coping with the interlocking sets of problems associated with the expansion of the modern metropolis Twelve papers on various aspects of metropolitan problems were commissioned from an international body of experts Working with these experts were study groups drawn from forty major metropolitan centres throughout the world After making exhaustive studies of their respective urban centres the groups reported their findings and submitted detailed briefs through their representatives at the conference Throughout the symposium a conscious effort was made to examine single aspects of social economic and physical change within the overall perspective of the metropolis The book reflects this approach Each chapter directs attention to specific problems of the metropolis problems resulting from the contradiction between accelerating technology and our ability to cope with the incredible pace and rate of change Together they prove that despite differences in technology culture and political and social matters the major urban areas of the world do have much in common Emerging tendencies can be analysed and corrective and preventative measures be made through comparative analysis This book was first published in 1970

Smaller Cities in a World of Competitiveness Peter Karl Kresl, Daniele Ietri, 2016-04-28 Much recent research in Urban Studies has concentrated on the notion of the global city but discussion has also covered a larger set of mega cities with populations in excess of 10 million This analysis has begged the question of the optimal size for a city is larger always better Smaller Cities explores the advantages and disadvantages of different sized cities trying to determine their place in the global economy and hierarchy How can smaller cities gain or retain their competitiveness in a world of large cities In a

globalized world the nation has perhaps been diminished as an economic actor with fiscal shortcomings and political gridlock leaving cities more or less on their own in the task of enhancing their competitiveness and improving the economic lives of their residents This book argues that smaller cities of varying population can be important actors in competitiveness and aims to bring attention to an area often overlooked by researchers In short are Pittsburgh San Diego and Austin less competitive than London and Mumbai This volume will be of interest to students researchers and city professionals who work in urban economy and urban geography
