It is written for an audience with an understanding of general principles in animal physiology yet offers a level of analysis and interpretation that will engage seasoned scientists. Each chapter is written by active researchers in the field of comparative physiology and draws on the primary literature of starvation both in nature and the laboratory. The chapters are organized among broad taxonomic categories such as protists, arthropods, fishes, reptiles, birds, and flying aquatic and terrestrial mammals including humans, particularly well studied animal models. e.g. endotherms are further organized by experimental approaches such as analyses of blood metabolites, stable isotopes, thermobiology and modeling of body composition.
