ICTs and Development in India T. T. Sreekumar, 2011 ICTs and Development in India is a unique attempt to study the nature and consequences of the growing presence of Information Technology in development projects in India focusing particularly on E governance and Information Communication Technologies ICT development programs initiated by Civil Society Organizations CSOs Sreekumar persuasively argues that there is in fact a wide chasm between the expectations and the actual benefits of CSO initiatives in rural India and that recognising this crucial fact yields important lessons in conceptualizing development and social action in rural areas **Technocities** John Downey, Jim McGuigan, 1999-06-22 Information and communication technologies are said to be transforming urban life dramatically and bringing about rapid

economic and cultural globalization This book explores the many fascinating and urgent issues involved by relating advanced theoretical debates to practical matters of communication with cultural policy It maps out a range of optimistic and pessimistic scenarios with special regard to various forms of inequality particularly class gender and geopolitical Topics discussed include urban planning virtual cities and actual cities economic and political policy and critical social analysis of current trends that are of momentous consequence The book concludes that it is necessary to bring together a number of different

Telematics and Work J.H. Erik Andriesson, Robert A. Roe, 2013-05-24 This volume is part of a publication series emerging from an international interdisciplinary study group on New Technologies and Work NeTWork NeTWork is sponsored by the Werner Reimers Foundation Bad Homburg Germany and the Maison des Sciences de l'Homme Paris The NeTWork study group has set itself the task of intellectually penetrating various problem domains posed by the introduction and spread of new technologies in work settings This problem focus requires interdisciplinary co operation The usual mode of operating is to identify an important problem within the NeTWork scope to attempt to prestructure it and then to invite original contributions from European researchers or research teams actively involved in relevant analytic or developmental work A specific workshop serves to cross fertilize the different approaches and to help to integrate more fully the individual contributions The concept of telematics refers to the integration of computer telecommunication and information technologies It alludes to the opportunities presented by the technical means to communicate and transfer data over large distances by intelligent equipment Teleshopping teleconferencing teleworking and telebanking are but a few examples of a development which influences both public and private environments Both households and workplaces are likely to be thoroughly changed by telematics This publication emphasises the application of telematics in working environments The central questions of the book are How will the present and future development of telematics effect the nature and organization of work and under which conditions will this development be optimal From the various contributions it is clear that telematics is not a single direct cause or determinant of particular changes in work and organization The development and application of telematics depend on decision making of actors at a political scene both outside and inside the work organizations The effects of the use of these applications appear to be co determined by many other factors In fact the technology interacts with political economic and social factors in a complex process that shapes new organizational forms and work relationships

Facing the Challenge of Risk and Vulnerability in an Information Society J. Berleur, Colin Beardon, Romain Laufer, 1993 An ounce of prevention is better than a pound of cure This comment from one of the contributors pinpoints the target of this publication to acknowledge vulnerability in our society and identify various means of coping with it The topic of social vulnerability may be approached from many different directions For some people the starting point is a particular system that because of its size and complexity is unreliable and therefore generates vulnerability It may be the design implementation or integration of sophisticated technological devices within the system which reduces its

reliability From another perspective social vulnerability is ultimately a subjective experience of individual people the starting point being the quality of life of the individual not the system In this way instead of facing uncertain reliability society is confronted with certain unreliability a general sensation of powerlessness and vulnerability in an age dominated by the use of complex information and communication technology The issue has at the same time three distinct aspects that of the reality of risk of the perception of risk and of the ability of the individual to act The papers incorporated in this volume achieve a reconciliation of the different perspectives and work towards the provision of some tentative first answers to the major question posed how do we meet the challenge of social vulnerability in an information age *International Labour*
