Social Learning And Systems Approaches To Marriage And The Family:

Social Learning and Systems Approaches to Marriage and the Family Ray DeV. Peters, Robert Joseph McMahon, 1988 Sourcebook of Family Theories and Methods Pauline Boss, William J. Doherty, Ralph LaRossa, Walter R. Schumm, Suzanne K. Steinmetz, 2008-11-19

Origins We call this book on theoretical orientations and methodological strategies in family studies a sourcebook because it details the social and personal roots i.e. sources from which these orientations and strategies flow. Thus an appropriate way to preface this book is to talk first of its roots its beginnings. In the mid 1980s there emerged in some quarters the sense that it was time for family studies to take stock of itself. A goal was thus set to write a book that like Janus would face both backward and forward a book that would give readers both a perspective on the past and a map for the future. There were precedents for such a project. The Handbook of Marriage and the Family edited by Harold Christensen and published in 1964 the two Contemporary Theories about the Family volumes edited by Wesley Burr Reuben Hill F. Ivan Nye and Ira Reiss published in 1979 and the Handbook of Marriage and the Family edited by Marvin Sussman and Suzanne Steinmetz then in production.

Family and Peers Angela M. Neal-Barnett, Josefina M. Contreras, Kathryn A. Kerns, 2000-04-30

Why is it that relationships with family members predict the quality of children's relationships outside the family? A wealth of research has documented that various aspects of family relationships are predictably related to the quality of children's interactions and relationships with peers. Understanding what account for these effects is important both for theories of children's relationships and intervention efforts to ameliorate children's peer relationship difficulties. This volume advances the field by discussing several mechanisms that may account for continuities across family and peer relationships. A variety of theoretical perspectives are represented in the book. For example both learning and biological explanations are considered. Authors also note two key considerations in investigating family and peer relationships. First it is necessary to consider the cultural context. The function and meaning of family and peer relationships may differ depending on what roles are played by these relationships in different cultural contexts. Second it is necessary to consider the child's age. Developmental issues such as concerns with establishing greater independence at the entrance to adolescence will impact both family and peer relationships.

Presented is innovative research that has yielded compelling insights into toddlers relationships emotions play communication prosocial behavior self control autonomy and attempts to understand themselves and others. The final chapter presents a systematic framework for socioemotional assessment.

which have shaped and defined the field of interpersonal development. It celebrates the maturation of the subject by bringing together the best work by scholars who have been instrumental in furthering the field. They also detail characteristics of specific relationships and interconnections among these key features as well as tying close relationships to individual outcomes. The essays are accompanied by an introduction which offers a brief history of the field, a review of relationship definitions, and a detailed preview of the articles.

Families, Risk, and Competence Michael Lewis, Candice Feiring, 2014-04-04. The problems of studying families arise from the difficulty in studying systems where there are multiple elements interacting with each other and with the child. How should this system be described? Still other problems relate to indirect effects, namely the influence of a particular dyad's interaction on the child when the child is not a member of the dyad. While all agree that the mother-father relationship has important bearing on the child's development, exactly how to study this, especially using observational techniques, remains a problem. While progress in studying the family has been slow, there is no question that an increase in interest in the family systems, as opposed to the mother-child relationship, is taking place. This has resulted in an increase in research on families and their effects. This volume, by leading figures in child development, attests to the growing sophistication of the conceptualization and measurement techniques for getting at family processes. The third in a series that aims to address topics relevant to the developmental problems and developmental disabilities of retardation, this volume is divided into two parts. Section 1 presents basic family processes and approaches for describing family dynamics. It deals with these issues from a broad perspective, including studying families at dinner, families in different cultural contexts, and the understanding of family in nonhuman primates. Section 2 looks at family processes in the service of studying families at risk. The risk factors include poverty, malnutrition, and developmental delay and retardation. The study of family processes in these contexts provides data on family dynamics as well as how these dynamics impact on the children's developing competence. This volume will be informative for researchers, clinicians, and educators from a variety of disciplines and settings. The editors' aim is to bring a greater clarity to issues concerning the family life of children and highlight new research and possibilities for intervention.

Separate Social Worlds of Siblings E.

Mavis Hetherington, David Reiss, Robert Plomin, 2013-05-13 One of the most notable findings in contemporary behavior genetics is that children growing up in the same family are not very comparable. Findings suggest that in order to understand individual differences between siblings it is necessary to examine not only the shared experiences but also the differences in experiences of children growing up in the same family. In the past decade a group of investigators has begun to examine the contributions of genetics and both shared and nonshared environment to development. As with many new research endeavors this has proven to be a difficult task with much controversy and disagreement not only about the most appropriate models and methods of analysis to be used but also about the interpretation of findings. Written by some of the foremost scholars working in the area on nonshared environment the papers in this book present their perspectives, concerns, strategies, and research findings dealing with the impact of nonshared environment on individual differences in the development of siblings. This volume will have heuristic value in stimulating researchers to think in new ways about the interactions between heredity, shared and nonshared environment, and the challenges in identifying their contributions to sibling differences. These papers should raise new questions about how to examine the contributions of genetic and environmental factors to development with consideration given to the findings of this study of sibling differences and nonshared environment. Further, these papers may encourage a growing trend to integrate genetic and environmental perspectives in studies of development. **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1988
