Spinors In Hilbert Space:

Spinors in Hilbert Space Paul Dirac, 2014-09-01 **Spinors in Hilbert Space** Paul Adrien Maurice Dirac, 1974-12 1

Hilbert Space The words Hilbert space here will always denote what mathematicians call a separable Hilbert space It is composed of vectors each with a denumerable infinity of coordinates $q_1, q_2, q_3, \dots$ Usually the coordinates are considered to be complex numbers and each vector has a squared length $\sum |q_r|^2$ This squared length must converge in order that the q 's may specify a Hilbert vector Let us express q_r in terms of real and imaginary parts $q_r = x_r + i y_r$ Then the squared length is $\sum (x_r^2 + y_r^2)$ The x 's and y 's may be looked upon as the coordinates of a vector It is again a Hilbert vector but it is a real Hilbert vector with only real coordinates Thus a complex Hilbert vector uniquely determines a real Hilbert vector The second vector has at first sight twice as many coordinates as the first one But twice a denumerable infinity is again a denumerable infinity so the second vector has the same number of coordinates as the first Thus a complex Hilbert vector is not a more general kind of quantity than a real one

Clifford Algebras and Spinor Structures Rafal Ablamowicz, P. Lounesto, 2013-06-29 This volume is dedicated to the memory of Albert Crumeyrolle who died on June 17 1992 In organizing the volume we gave priority to articles summarizing Crumeyrolle's own work in differential geometry general relativity and spinors articles which give the reader an idea of the depth and breadth of Crumeyrolle's research interests and influence in the field articles of high scientific quality which would be of general interest In each of the areas to which Crumeyrolle made significant contribution Clifford and exterior algebras Weyl and pure spinors spin structures on manifolds principle of triality conformal geometry there has been substantial progress Our hope is that the volume conveys the originality of Crumeyrolle's own work the continuing vitality of the field he influenced and the enduring respect for and tribute to him and his accomplishments in the mathematical community It is our pleasure to thank Peter Morgan Artibano Micali Joseph Grifone Marie Crumeyrolle and

Clifford Algebras and their Applications in Mathematical Physics A. Micali, R. Boudet, J. Helmstetter, 2013-03-09 This volume contains selected papers presented at the Second Workshop on Clifford Algebras and their Applications in Mathematical Physics These papers range from various algebraic and analytic aspects of Clifford algebras to applications in for example gauge fields relativity theory supersymmetry and supergravity and condensed phase physics Included is a biography and list of publications of Mario Schenberg who next to Marcel Riesz has made valuable contributions to these topics This volume will be of interest to mathematicians working in the fields of algebra geometry or special functions to physicists working on quantum mechanics or supersymmetry and to historians of mathematical physics

Spinors In Physics And Geometry Giuseppe Furlan, Andrzej Trautman, 1988-11-01 This conference brought together physicists and mathematicians working on spinors which have played an important role in recent research on supersymmetry Kaluza Klein theories twistors and general relativity

Spinors on Singular Spaces and the Topology of Causal Fermion Systems Felix Finster, Niky Kamran, 2019-06-10 Causal fermion systems and Riemannian fermion systems are proposed as a framework for describing non smooth geometries In particular this framework provides a setting for spinors on singular spaces The underlying topological structures are introduced and analyzed The connection to the spin condition in differential topology is worked out The constructions are illustrated by many simple examples such as the Euclidean plane the two dimensional Minkowski space a conical singularity a lattice system as well as the curvature singularity of the Schwarzschild space time As further examples it is shown how complex and Kähler structures can be encoded in Riemannian fermion systems
