Speech Perception and Spoken Word Recognition

Edited by GARETH GASKELL
and JELENA MIRKOVIĆ

A Psychology Press Book

Spoken Word Recognition

**Uli H. Frauenfelder, Lorraine
Komisarjevsky Tyler**

Spoken Word Recognition:

Speech Perception and Spoken Word Recognition Gareth Gaskell, Jelena Mirković, 2016-10-04 *Speech Perception and Spoken Word Recognition* features contributions from the field's leading scientists and covers recent developments and current issues in the study of cognitive and neural mechanisms that take patterns of air vibrations and turn them magically into meaning. The volume makes a unique theoretical contribution in linking behavioural and cognitive neuroscience research and cutting across traditional strands of study such as adult and developmental processing. The book focusses on the state of the art in the study of speech perception and spoken word recognition. Discusses the interplay between behavioural and cognitive neuroscience evidence and between adult and developmental research. Evaluates key theories in the field and relates them to recent empirical advances including the relationship between speech perception and speech production, meaning representation and real time activation and bilingual and monolingual spoken word recognition. Examines emerging areas of study such as word learning and time course of memory consolidation and how the science of human speech perception can help computer speech recognition. Overall this book presents a renewed focus on theoretical and developmental issues as well as a multifaceted and broad review of the state of research in speech perception and spoken word recognition. Particularly interested readers will be researchers of psycholinguistics and adjoining fields as well as advanced undergraduate and postgraduate students. **Spoken Word Recognition** Lorraine Komisarjevsky Tyler, 1987

Spoken Word Recognition Uli H. Frauenfelder, Lorraine Komisarjevsky Tyler, 1987 *Spoken Word Recognition* covers the entire range of processes involved in recognizing spoken words both in and out of context. It brings together a number of essays dealing with important theoretical questions raised by the study of spoken word recognition among them: how do we understand fluent speech as efficiently and effortlessly as we do? What are the mental processes and representations involved when we recognize spoken words? How do these differ from those involved in reading written words? What information is stored in our mental lexicon and how is it structured? What do linguistic and computational theories tell us about these psychological processes and representations? The multidisciplinary presentation of work by phoneticians, linguists, psychologists and computer scientists reflects the growing interest in spoken word recognition from a number of different perspectives. It is a natural consequence of the mediating role that lexical representations and processes play in language understanding, linking sound with meaning. Following the editors' introduction, the contributions and their authors are: Acoustic Phonetic Representation in Word Recognition David B Pisoni and Paul A Luce; Phonological Parsing and Lexical Retrieval Kenneth W Church; Parallel Processing in Spoken Word Recognition William D Marslen Wilson; A Reader's View of Listening Dianne C Bradley and Kenneth I Forster; Prosodic Structure and Spoken Word Recognition Francois Grosjean and James Paul Gee; Structure in Auditory Word Recognition Lyn Frazier; The Mental Representation of the Meaning of Words P N Johnson Laird; Context Effects in Lexical Processing Michael K Tanenhaus and Margery M Lucas. Uli H Frauenfelder is a

researcher with the Max Planck Institut für Psycholinguistik and Lorraine Komisarjevsky Tyler is a professor in the Department of Experimental Psychology at the University of Cambridge Spoken Word Recognition is in a series that is derived from special issues of Cognition International Journal of Cognitive Science edited by Jacques Mehler A Bradford Book

Spoken Word Recognition Paradigms François Grosjean, 1996 *The Microstructure of Spoken Word Recognition* James Stephen Magnuson, 2001 *The Role of Dynamic Cues in Speech Perception, Spoken Word Recognition, and Phonological Universals* Natasha Lynn Warner, 1998 *A Survey of Options in Spoken Word Recognition Systems Using Dynamic Time Warping* F. R. McInnes, University of Edinburgh. Centre for Speech Technology Research, 1985 *A Neural Network Model for Spoken Word Recognition* Gary Neil Tajchman, 1993 **Speaker and Group Specificity in Spoken Word Recognition** Edward Thomas King, 2021 Spoken words vary phonetically along a number of dimensions such as duration pitch and vowel quality Much of this variation is associated with social factors like the dialect age or gender of the speaker a type of variation termed socio indexical Traditional theories of speech perception have seen this socio indexical variation as a source of noise that listeners must filter out in order to match the noisy speech signal to abstract mental representations of words or phonemes But more recent theories propose that socially salient variation can actually make speech perception easier for listeners as long as the variation is congruent with their experience exemplar theory Goldinger 1996 Johnson 2006 because listeners maintain specific detailed memories of instances of language that they have experienced Exemplar models make fairly narrow predictions about the interactions between specific memories and socio indexical information specific memories are represented only at the surface phonetic level so they should not affect deeper linguistic systems like semantics and socio indexical group recognition is a byproduct of word recognition happening serially after words are recognized Recent evidence however raises significant questions about these predictions In this dissertation I argue that while socio indexical variation does facilitate word recognition this facilitation is more widespread than expected I begin by using several large collections of spoken conversations to determine which words are used more often by women and which more often by men I then use laboratory experiments to establish that listeners sensitivity to these group specific word frequencies interacts with both phonology and semantics beyond the predictions of exemplar theory suggesting the need for more complex spoken word recognition mechanisms **The Influence of Semantic Representations on Spoken Word Recognition** Jonna L. Armbrüster, 2005

Decoding **Spoken Word Recognition**: Revealing the Captivating Potential of Verbal Expression

In an era characterized by interconnectedness and an insatiable thirst for knowledge, the captivating potential of verbal expression has emerged as a formidable force. Its power to evoke sentiments, stimulate introspection, and incite profound transformations is genuinely awe-inspiring. Within the pages of "**Spoken Word Recognition**," a mesmerizing literary creation penned by way of a celebrated wordsmith, readers embark on an enlightening odyssey, unraveling the intricate significance of language and its enduring impact on our lives. In this appraisal, we shall explore the book's central themes, evaluate its distinctive writing style, and gauge its pervasive influence on the hearts and minds of its readership.
