

Contingency Tables

- A contingency table allows us to look at two categorical variables together.
- It shows how individuals are distributed along each variable, contingent on the value of the other variable.
 - Example: we can examine the class of ticket and whether a person survived the *Titanic*:

		Class				
		First	Second	Third	Crew	Total
Survival	Alive	203	118	178	212	711
	Dead	122	167	528	673	1490
	Total	325	285	706	885	2201

The Information in Contingency Tables Dattaprabhakar V. Gokhale, Solomon Kullback, 1976 **The Information in Contingency Tables** Dattaprabhakar Vinayak Gokhale, Solomon Kullback, GEORGE WASHINGTON UNIV WASHINGTON D C DEPT OF STATISTICS., United States. Army Research Office, 1973 Data which result from experiments in the physical sciences and engineering are usually outcomes of controlled experiments and expressible in quantitative terms In many other fields however the data are seldom results of controlled experiments In addition the observations usually can be expressed only in qualitative or categorical terms If observations are taken over a sample of many such individuals the result will be a multidimensional contingency table with as many dimensions as there are classifications Contingency tables are cross classifications of vectors of discrete random variables showing the number of subjects belonging to distinct categories of each of several qualitative or categorical classifications The Information in Contingency Tables - An Application of Information-Theoretic Concepts to the Analysis of Contingency Tables C. T. Ireland, S. Kullback, 1976 The analysis of the information in contingency tables is an aspect of multivariate multiple variates analysis with particular application to qualitative or categorical as well as quantitative variables The analysis is concerned with counts in multiway cross classifications or multiway contingency tables Multiway contingency tables or cross classifications of vectors of discrete random variables provide a useful approach to the analysis of multivariate discrete data The method of analysis presented will bring out the various inter relationships among the classificatory variables in a multiway cross classification or contingency table in many dimensions The procedure is based on the Principle of Minimum Discrimination Information Estimation associated statistics and Analysis of Information General computer programs are available to provide the necessary results for inference An analysis of a four way contingency table is presented for illustration of these techniques Author The Information in Contingency Tables Solomon Kullback, 1974 Statistical Analysis of Contingency Tables Morten Fagerland, Stian Lydersen, Petter Laake, 2017-07-28 Statistical Analysis of Contingency Tables is an invaluable tool for statistical inference in contingency tables It covers effect size estimation confidence intervals and hypothesis tests for the binomial and the multinomial distributions unpaired and paired 2x2 tables rxc tables ordered rx2 and 2xc tables paired cxc tables and stratified tables For each type of table key concepts are introduced and a wide range of intervals and tests including recent and unpublished methods and developments are presented and evaluated Topics such as diagnostic accuracy inter rater reliability and missing data are also covered The presentation is concise and easily accessible for readers with diverse professional backgrounds with the mathematical details kept to a minimum For more information including a sample chapter and software please visit the authors website The Analysis of Cross-Classified Categorical Data Stephen E. Fienberg, 2007-07-30 Until recent years the statistical and computational techniques available for the analysis of cross classified data were quite limited This book presents some of the recent work on the statistical analysis of cross classified
