Curves and Surfaces in Geometric Modeling Jean H. Gallier, 2000 Curves and Surfaces in Geometric Modeling Theory and Algorithms offers a theoretically unifying understanding of polynomial curves and surfaces as well as an effective approach to implementation that you can apply to your own work as a graduate student scientist or practitioner The focus here is on blossoming the process of converting a polynomial to its polar form as a natural purely geometric explanation of the behavior of curves and surfaces This insight is important for more than just its theoretical elegance the author demonstrates the value of blossoming as a practical algorithmic tool for generating and manipulating curves and surfaces that meet many different criteria You will learn to use this and other related techniques drawn from affine geometry for computing and adjusting control points deriving the continuity conditions for splines creating subdivision surfaces and more It will be an essential acquisition for readers in many different areas including computer graphics and animation robotics virtual reality geometric modeling and design medical imaging computer vision and motion planning

Practical Applications of Asymptotic

Techniques in Electromagnetics Francisco Sáez de Adana, 2011 Antenna wireless communication and other electrical engineers use asymptotic techniques for solving electromagnetic problems when the electrical size of a given scenario is large in comparison to the wavelength This practical book offers in depth coverage of this area showing how to apply these techniques to the analysis of complex electromagnetic problems in order to obtain results with an exceptionally high degree of accuracy Focusing on two highly effective methods the uniform theory of diffraction UTD and physical optics PO this book is unique in that it emphasizes how to solve real world problems rather than simply explaining theory like other books on the market This first of its kind resource show professionals how to apply this knowledge to a wide range of projects in the field including antenna design mobile communications and RCS radar cross section computation This authoritative book is supported with more than 100 illustrations and over 250 equations

Modelling and Motion Capture Techniques for Virtual Environments Nadia Magnenat-Thalmann, Daniel Thalmann, 2003-05-20 The CAPTECH 98 workshop took place at the University of Geneva on November 26 27 1998 sponsored by FIP Working Group 5 10 Computer Graphics and Virtual Worlds and the Suisse Romande regional doctoral seminar in computer science The subject of the conference was ongoing research in data capture and interpretation The goals of capturing real world data in order to perceive understand and interpret them and then reacting to them in a suitable way are currently important research problems These data can be very diverse sounds emotions shapes motions forces muscles actions etc Once captured they have to be treated either to make the invisible visible or to understand a particular phenomenon so as to formulate an appropriate reaction or to integrate various information in a new multimedia format The conference included six sessions of presented papers and three panel discussions Invited speakers treating various aspects of the topic were Professor R Earnshaw from Bradford University Professor T L Kunii from Hosei University and Professor P Robert from EPFL Professor K Bauknecht of the University of Zurich President of IFIP offered the welcoming address Mr E Badique project officer for the EU in Brussels discussed recent results of the EU ACTS research program Finally the Geneva Computer Animation 98 Film Festival highlighted the evening of November 26

Curves and Surfaces for Computer-Aided Geometric Design Gerald Farin, 2014-06-28 A leading expert in CAGD Gerald Farin covers the representation manipulation and evaluation of geometric shapes in this the Third Edition of *Curves and Surfaces for Computer Aided Geometric Design* The book offers an introduction to the field that emphasizes Bernstein Bezier methods and presents subjects in an informal readable style making this an ideal text for an introductory course at the advanced undergraduate or graduate level The Third Edition includes a new chapter on Topology offers new exercises and

sections within most chapters combines the material on Geometric Continuity into one chapter and updates existing materials and references Implementation techniques are addressed for practitioners by the inclusion of new C programs for many of the fundamental algorithms The C programs are available on a disk included with the text System Requirements IBM PC or compatibles DOS version 2.0 or higher Covers representation manipulation and evaluation of geometric shapes Emphasizes Bernstein Bezier methods Written in an informal easy to read style

The Essentials of CAGD Gerald Farin, Dianne Hansford, 2000-10-25 Putting the G into CAGD the authors provide a much needed practical and basic introduction to computer aided geometric design This book will help readers understand and use the elements of computer aided geometric design curves and surfaces without the mathematical baggage that is necessary only for more advanced work Though only minimal backg

Knotted Surfaces and Their Diagrams J. Scott Carter, Masahico Saito, 2023-12-06 In this book the authors develop the theory of knotted surfaces in analogy with the classical case of knotted curves in 3 dimensional space In the first chapter knotted surface diagrams are defined and exemplified these are generic surfaces in 3 space with crossing information given The diagrams are further enhanced to give alternative descriptions A knotted surface can be described as a movie as a kind of labeled planar graph or as a sequence of words in which successive words are related by grammatical changes In the second chapter the theory of Reidemeister moves is developed in the various contexts The authors show how to unknot intricate examples using these moves The third chapter reviews the braid theory of knotted surfaces Examples of the Alexander isotopy are given and the braid movie moves are presented In the fourth chapter properties of the projections of knotted surfaces are studied Oriented surfaces in 4 space are shown to have planar projections without cusps and without branch points Signs of triple points are studied Applications of triple point smoothing that include proofs of triple point formulas and a proof of Whitney's congruence on normal Euler classes are presented The fifth chapter indicates how to obtain presentations for the fundamental group and the Alexander modules Key examples are worked in detail The Seifert algorithm for knotted surfaces is presented and exemplified The sixth chapter relates knotted surfaces and diagrammatic techniques to 2 categories Solutions to the Zamolodchikov equations that are diagrammatically obtained are presented The book contains over 200 illustrations that illuminate the text Examples are worked out in detail and readers have the opportunity to learn first hand a series of remarkable geometric techniques

Computer Graphics through Key Mathematics Huw Jones, 2012-12-06 Computer Graphics through Key Mathematics introduces the mathematics that support computer graphics on a need to know basis Its approach means you don't have to do advanced mathematical manipulation in order to understand the capabilities scope and limitations of the computer graphics systems that create impressive images The book is written in a clear easy to understand way and is aimed at all those who have missed out on an extended mathematical education but who are studying or working in areas where computer graphics or 3D design plays a vital part All those who have no formal training but who want to understand the foundations of computer

graphics systems should read this book as should mathematicians who want to understand how their subject is used in computer image synthesis

Advanced Methods for Geometric Modeling and Numerical Simulation Carlotta Giannelli, Hendrik Speleers, 2019-09-18 This book gathers selected contributions presented at the INdAM Workshop DREAMS held in Rome Italy on January 22-26 2018 Addressing cutting edge research topics and advances in computer aided geometric design and isogeometric analysis it covers distinguishing curve surface constructions and spline models with a special focus on emerging adaptive spline constructions fundamental spline theory and related algorithms as well as various aspects of isogeometric methods e.g. efficient quadrature rules and spectral analysis for isogeometric B-spline discretizations Applications in finite element and boundary element methods are also discussed Given its scope the book will be of interest to both researchers and graduate students working in these areas

Computer Aided Engineering Design Anupam Saxena, Birendra Sahay, 2007-12-08 A new discipline is said to attain maturity when the subject matter takes the shape of a textbook Several textbooks later the discipline tends to acquire a firm place in the curriculum for teaching and learning Computer Aided Engineering Design CAED barely three decades old is interdisciplinary in nature whose boundaries are still expanding However it draws its core strength from several acknowledged and diverse areas such as computer graphics differential geometry Boolean algebra computational geometry topological spaces numerical analysis mechanics of solids engineering design and a few others CAED also needs to show its strong linkages with Computer Aided Manufacturing CAM As is true with any growing discipline the literature is widespread in research journals edited books and conference proceedings Various textbooks have appeared with different biases like geometric modeling computer graphics and CAD/CAM over the last decade This book goes into mathematical foundations and the core subjects of CAED without allowing itself to be overshadowed by computer graphics It is written in a logical and thorough manner for use mainly by senior and graduate level students as well as users and developers of CAD software The book covers a The fundamental concepts of geometric modeling so that a real understanding of designing synthetic surfaces and solid modeling can be achieved b A wide spectrum of CAED topics such as CAD of linkages and machine elements finite element analysis optimization c Application of these methods to real world problems
