**Applications of the Laser** Leon Goldman, 2018-05-04 The laser's range of application is extraordinary Arthur Schawlow says What instrument can shuck a bucket of oysters correct typing errors fuse atoms lay a straight line for a garden bed repair detached retinas and drill holes in diamonds O The laser's specifically biomedical uses cover a similarly broad and interesting spectrum In this book I have endeavored to convey some of the fascination that the laser has long held for me It is my hope that both clinicians and researchers in the various medical and surgical specialties will find the book a useful introduction Biologists particularly molecular biologists should also find a great deal of relevant information herein This volume's distinguished contributors provide admirably lucid discussions of laser principles instrumentation and current practice in their respective specialties Safety design capabilities and costs of various lasers are also reviewed We have aimed to create a practical text that is comprehensive but not exhaustive Our emphasis on the practical rather than the esoteric is dictated not only by the short history of biomedical laser use but by the extent of the community to which this information will appeal

**Beam : The Race to Make the Laser** Jeff Hecht, 2005-02-11 In 1954 Charles Townes invented the laser's microwave cousin the maser The next logical step was to extend the same physical principles to the shorter wavelengths of light but the idea did not catch fire until October 1957 when Townes asked Gordon Gould about Gould's research on using light to excite thallium atoms Each took the idea and ran with it The independent minded Gould sought the fortune of an independent inventor the professorial Townes sought the fame of scientific recognition Townes enlisted the help of his brother in law Arthur Schawlow and got Bell Labs into the race Gould turned his ideas into a patent application and a million dollar defense contract They soon had company Ali Javan

one of Townes's former students began pulling 90-hour weeks at Bell Labs with colleague Bill Bennett. And far away in California a bright young physicist named Ted Maiman became a very dark horse in the race. While Schawlow proclaimed that ruby could never make a laser, Maiman slowly convinced himself it would. As others struggled with recalcitrant equipment and military secrecy, Maiman built a tiny and elegant device that fit in the palm of his hand. His ruby laser worked the first time he tried it on May 16, 1960, but afterwards he had to battle for acceptance as the man who made the first laser. Beam is a fascinating tale of a remarkable and powerful invention that has become a symbol of modern technology.

**Exploring the World with the Laser** Dieter Meschede, Thomas Udem, Tilman Esslinger, 2018-01-02 This edition contains carefully selected contributions by leading scientists in high-resolution laser spectroscopy, quantum optics, and laser physics. Emphasis is given to ultrafast laser phenomena, implementations of frequency combs, precision spectroscopy, and high-resolution metrology. Furthermore, applications of the fundamentals of quantum mechanics are widely covered. This book is dedicated to Nobel prize winner Theodor W. H. N. on the occasion of his 75th birthday. The contributions are reprinted from a topical collection published in Applied Physics B. 2016.
