The Impact Of Gene Transfer Techniques In Eukaryotic Cell Biology Gesellschaft:

The Impact of Gene Transfer Techniques in Eukaryotic Cell Biology J. S. Schell, P. Starlinger, 2012-12-06 The 35th N osbach Colloquium The Impact of Gene Transfer Techniques in Eukaryotic CeU Biology brought together a number of speakers interested in various aspects of cellular and developmental biology and over 600 other scientists who listened to the lectures and participated in the lively discussions The questions and experiments described were very varied but all of them illustrated the importance of recombinant DNA technology The powerful techniques of identifying and isolating DNA sequences followed by their introduction into living cells and even into the germ cells of multicellular organisms have pervaded nearly every branch of molecular biology The presentations and discussions that followed showed that recombinant DNA has tremendously increased our potential for fundamental research Now and for some time to come these contributions and the resulting increase in our understanding of life will be the main result of gene manipulation There will however also be applications that will lead to new industrial processes One section was devoted to novel ways of vaccine production and another to herbicide resistance These applications are a matter of intense debate in the public domain today Although they reach beyond the scope of the research laboratory at a university or research institution scientists have the knowledge necessary to judge these developments and are sometimes directly involved Therefore the development of industrial gene technology requires the attention of the whole scientific community We hope that this Symposium has also served this purpose **The Impact of Gene Transfer Techniques in Eukaryotic Cell Biology** Gesellschaft für Biologische
