The Infinite In Mathematics Logicomathematical Writings:

The Infinite in Mathematics Felix Kaufmann, 2012-12-06 The main item in the present volume was published in 1930 under the title *Das Unendliche in der Mathematik und seine Ausschaltung*. It was at that time the fullest systematic account from the standpoint of Husserl's phenomenology of what is known as finitism also as intuitionism and constructivism in mathematics. Since then important changes have been required in philosophies of mathematics in part because of Kurt Gödel's epoch making paper of 1931 which established the essential incompleteness of arithmetic. In the light of that finding a number of the claims made in the book and in the accompanying articles are demonstrably mistaken. Nevertheless as a whole it retains much of its original interest and value. It presents the issues in the foundations of mathematics that were under debate when it was written and in some cases still are and it offers one alternative to the currently dominant set theoretical definitions of the cardinal numbers and other arithmetical concepts. While still a student at the University of Vienna Felix Kaufmann was greatly impressed by the early philosophical writings especially by the *Logische Untersuchungen* of Edmund Husserl. He was never an uncritical disciple of Husserl and he integrated into his mature philosophy ideas from a wide assortment of intellectual sources. But he thought of himself as a phenomenologist and made frequent use in all his major publications of many of Husserl's logical and epistemological theses.

Ways of the Scientific World-Conception. Rudolf Carnap and Otto Neurath, 2024-07-22 Rudolf Carnap 1891-1970 and Otto Neurath 1882-1945 had a decisive influence on the development of the scientific world view of logical empiricism. Their relationship was marked by mutual intellectual stimulation, close collaboration and personal friendship but also by controversies that were as heated as they were rarely fought out in public. Carnap and Neurath were in the words of Olga Hahn Neurath like minded opponents. The essays in this volume deal with these key thinkers of logical empiricism from different perspectives shedding light on the complex development of one of the most influential philosophical currents of the twentieth century in the midst of dark times.

Roads to Infinity John Stillwell, 2010-07-13 Winner of a CHOICE Outstanding Academic Title Award for 2011. This book offers an introduction to modern ideas about infinity and their implications for mathematics. It unifies ideas from set theory and mathematical logic and traces their effects on mainstream mathematical topics of today such as number theory and combinatorics. The treatment is historical and partly informal but with due attention to the subtleties of the subject. Ideas are shown to evolve from natural mathematical questions about the nature of infinity and the nature of proof set against a background of broader questions and developments in mathematics. A particular aim of the book is to acknowledge some important but neglected figures in the history of infinity such as Post and Gentzen alongside the recognized giants Cantor and Gödel.

Brouwer meets Husserl Mark van Atten, 2006-11-08 Can the straight line be analysed mathematically such that it does not fall apart into a set of discrete points as is usually done but through which its fundamental continuity is lost? And are there objects of pure mathematics that can change through time? Mathematician and philosopher L. E. J. Brouwer

argued that the two questions are closely related and that the answer to both is yes To this end he introduced a new kind of object into mathematics the choice sequence But other mathematicians and philosophers have been voicing objections to choice sequences from the start This book aims to provide a sound philosophical basis for Brouwer s choice sequences by subjecting them to a phenomenological critique in the style of the later Husserl

Husserl and the Sciences Richard A. Feist, 2004-02-18 Edmund Husserl 1859 1938 is one of the previous century s most important thinkers Often regarded as the Father of phenomenology this collection of essays reveals that he is indeed much more than that The breadth of Husserl s thought is considerable and much remains unexplored An underlying theme of this volume is that Husserl is constantly returning to origins revising his thought in the light of new knowledge offered by the sciences Published in English

Foundations of Mathematics and other Logical Essays Frank Plumpton Ramsey, 2013-10-15 This is Volume V in a series of eight on the Philosophy of Logic and Mathematics Originally published in 1931 this study offers a collection of logical essays around the topic of the foundations of mathematics Though mathematical teaching was Ramsey s profession philosophy was his vocation Reared on the logic of Principia Mathematica he was early to see the importance of Dr Wittgenstein s work in the translation of which he assisted and his own published papers were largely based on this But the previously unprinted essays and notes collected in this volume show him moving towards a kind of pragmatism and the general treatise on logic upon which at various times he had been engaged was to have treated truth and knowledge as purely natural phenomena to be explained psychologically without recourse to distinctively logical relations

Essays on Husserl's Logic and Philosophy of Mathematics Stefania Centrone, 2017-09-07 Essays on Husserl s Logic and Philosophy of Mathematics sets out to fill up a lacuna in the present research on Husserl by presenting a precise account of Husserl s work in the field of logic of the philosophy of logic and of the philosophy of mathematics The aim is to provide an in depth reconstruction and analysis of the discussion between Husserl and his most important interlocutors and to clarify pivotal ideas of Husserl s by considering their reception and elaboration by some of his disciples and followers such as Oskar Becker and Jacob Klein as well as their influence on some of the most significant logicians and mathematicians of the past century such as Luitzen E J Brouwer Rudolf Carnap Kurt G del and Hermann Weyl Most of the papers consider Husserl and another scholar e g Leibniz Kant Bolzano Brentano Cantor Frege and trace out and contextualize lines of influence points of contact and points of disagreement Each essay is written by an expert of the field and the volume includes contributions both from the analytical tradition and from the phenomenological one

18 Unconventional Essays on the Nature of Mathematics Reuben Hersh, 2006-01-16 This book comes from the Internet Browsing the Web I stumbled on philosophers cognitive scientists sociologists computer scientists even mathematicians saying original provocative things about mathematics And many of these people had probably never heard of each other So I have collected them here This way they can read each other's work I also bring back a few provocative oldies that deserve publicity The authors are philosophers mathematicians a cognitive scientist an anthropologist a computer scientist and a couple of sociologists Among the mathematicians are two Fields Prize winners and two Steele Prize winners None are historians I regret to say but there are two historically oriented articles These essays don't share any common program or ideology The standard for admission was Nothing boring Nothing trite nothing trivial Every essay is challenging thought provoking and original Back in the 1970s when I started writing about mathematics instead of just doing mathematics I had to complain about the literature Philosophy of science was already well into its modern revival largely stimulated by the book of Thomas Kuhn But philosophy of mathematics still seemed to be mostly foundationist ping pong in the ancient style of Rudolf Carnap or Willard Van Ormond Quine The great exception was Proofs and Refutations by Imre Lakatos But that exciting book was still virtually unknown and unread by either mathematicians or philosophers I wrote an article entitled Introducing Imre Lakatos in the Mathematical Intelligencer in 1978

In each chapter contributors approach their topics not merely in an historical and exegetical fashion but also engage critically with the thought of the philosophers whose work they discuss, offering synthesis and original philosophical thought. Nonlinear Dynamics in the Life and Social Sciences William H. Sulis, Irina Nikolaevna Trofimova, 2001. Incorporating chaos theory into psychology and the life sciences, this text includes empirical studies of neural encoding, memory, eye movements, warfare, business cycles, and selection of time series analysis algorithms. There are theoretical chapters on emergence and social dynamics and clinical contributions dealing with the measurement of quality of life for psychiatric patients, psychosis, the organization of self, and the role of love in family dynamics. Finally, ideas from non-linear dynamics are applied to understanding the creative process.

New Essays on the a Priori Paul Artin Boghossian, Christopher Peacocke, 2000. The topics of a priori knowledge and a priori justification have long played a prominent part in epistemology and the theory of meaning. Recently there has been a surge of interest in the proper explication of these notions. These newly commissioned essays by a distinguished international group of philosophers are likely to have a substantial influence on later work in this area. They discuss the relations of the a priori to meaning, justification, definition, and ontology; they consider the role of the notion in Leibniz, Kant, Frege, and Wittgenstein, and they address its role in recent discussions in the philosophy of mind. Particular attention is also paid to the a priori in logic, science, and mathematics. The authors exhibit a wide variety of approaches: some remaining sceptical of the notion itself, some proposing that it receive a non-factualist treatment, and others proposing novel ways of explicating and defending it. The editors' Introduction provides a helpful route into the issues.
