The Intelligent Enterprise Theoretical Concepts And Practical Implications:

The Intelligent Enterprise Markus J. Thannhuber, 2005 Today's enterprises have to continuously extend their operational limits to earn profit thrive and prosper Over time evolution led to the development of two concepts to master this challenge intelligence and knowledge This work introduces a system theoretic perspective on enterprises regarding them as natural living systems formed by evolutionary forces Intelligence and knowledge manifest in the system's behavior Intelligence is identified as the necessary framework that realizes continuous adaptation through the ongoing development and incorporation of control procedures and building blocks The content that fills this framework is the Enterprise Knowledge The rigid framework of business processes has to be replaced by a project framework employees have to be integrated as Knowledge Workers and IT systems have to offer advanced structural and organizational properties to facilitate declarative processing The transition towards intelligent enterprises requires drastic organizational changes With the presented work Markus Thannhuber introduces a theoretic framework and opens up new perspectives for Managerial Sciences Organization Theory and Industrial Engineering Hans J rg Bullinger President of the Fraunhofer Gesellschaft Munich Germany *The Intelligent Enterprise* Markus J. Thannhuber, 2006-03-30 In today's competitive environments enterprises face diminishing market life spans increasing pressure on profit margins and increasingly complex customer requirements Thus in their operations modern organizations have to find a high level balance between dynamics complexity and precision in order to best utilize their markets Organization Theory and Industrial Engineering the disciplines on hand helping industry to cope with this challenge soon identified process optimizations as the key to possible solutions Many efforts have been undertaken to provide sound theoretical models to deal with complexity and dynamics and streamline business processes These efforts on the one hand helped companies to be more precise in carrying out their actions and even provided solutions to produce customized products at near mass production prices Mass Customization On the other hand it turned out to be one of the most difficult tasks to generalize and transfer experiences gained in one process reengineering project to another and put the theoretical models into practice Not without reason is it the extremely high failure rate of business process reengineering projects that today deters most enterprises from entering such adventures Right at the same time there emerged a new and highly promising scientific branch Knowledge Management that attracted many disciplines among others again Organization Theory and Industrial Engineering Knowledge was identified as a major production factor In industrialized countries value added is mainly raised by the intellectual abilities of a company's workforce **Business Education and Ethics:**

only on implementing digital technologies of Industry 4.0. A natural consequence of this trend is the concern of workers, governments and societies about new challenges and the role of humans in industry and the economy. The hope is the emergence of a new industry concept proposed by the European Commission that expands the features of the existing Industry 4.0 concept to include human-centric, environmental and resilience aspects in smart organizations. Industry 5.0 is an excellent alternative to the development of today's digital and dehumanized world, and this book presents challenges and priority directions for smart organizations in an environment shaped by the pillars of Industry 5.0. This research volume discusses the development of technologies that support human-oriented work systems, sustainable production and system resilience in intelligent organizations. It presents an educational challenge for universities and vocational schools in preparing employees for intelligent organizations and will be of interest to researchers, academics, policymakers and students in the fields of organizational studies, knowledge management and the digital economy.
