The Kidney And Hypertension In Diabetes Mellitus Fourth:

The Kidney and Hypertension in Diabetes Mellitus Carl Erik Mogensen, 2013-06-29 medical research covered in this volume epidemiology physiology and pathophysiology laboratory methodology and renal pathology New studies deal with the diagnosis and treatment of both incipient and overt nephropathy by metabolic antihypertensive and dietary intervention Considerable progress has been made in the management of end stage renal failure and also in the management and treatment of nephropathy in the pregnant diabetic woman Diabetic nephropathy is a worldwide problem but it is more clearly defined in Europe and North America where facilities for the diagnosis and treatment of diabetes and its complications are readily available Much more work needs to be done in other parts of the world as it appears from this book It is hoped that we now have a handbook for the kidney and hypertension in diabetes and that further progress can be made in clinical work in diagnosing and treating diabetic patients Much more work still needs to be done regarding patient education with respect to complications Many diabetics have now been trained to take part in the management of their metabolic control they should also be trained to take part in the follow up and treatment of complications This volume also underlines the considerable need for future research So far research in this field has been carried out in relatively few countries and centers in the world The editor is sure that this volume will also stimulate further advancement in clinical science within the field of diabetic renal disease

Lewis's Medical-Surgical Nursing, Fourth South Asia Edition - E-Book Chintamani, Dr. L.
